

Hemingford

G. M. Jenkins went down to Lincoln Saturday night on business matters.

Kern Canfield of Sioux county, was a business visitor in our town the latter part of the week.

Mrs. Toohy, of Alliance, was an over Saturday night and Sunday visitor with Freida Danborn and Mrs. Earl Rocky.

Rev. Burchell and nephew, a Mr. Kendall, sojourned in town over Wednesday night. Mr. Kendall is representing the University of Nebraska.

Mrs. Rupert Walker went to Denver Saturday night to select her fall and winter stock of millinery, which will be on display in a short time.

A. M. Miller and W. F. Walker autoed up to Chadron Saturday, returning Sunday afternoon.

Miss Grace Spellman went to Fullerton, Nebraska, the middle of the week for a visit and to attend chautauqua at that place.

Several from here attended the dance out at the Annen home Saturday evening.

Frank Wolverson came from Camp Cody the latter part of the week for a visit with his wife and other relatives.

Mrs. B. U. Shepherd went to Alliance Thursday morning, where she had her tonsils taken out. Mrs. Shepherd was brought to her home here Saturday evening where she is doing nicely.

Will Eneyart returned to camp Thursday, having been called here on account of the illness and death of his father.

Winnie Uhrig was an incoming passenger on 41 Tuesday. Winnie is stationed at some fort in Pennsylvania and is taking a ten days furlough.

Miss Mae Haynes, of St. Louis, Mo., arrived Saturday for a visit with her brother, A. P. Haynes and family.

Earl Phillips received quite a painful injury Saturday. He with some other boys was riding in the auto truck driven by Mr. Ball. The boys sat down in the end of the truck with their feet hanging outside and as the truck was backed up to the step at the rear of the Wiltsey store Earl's foot was caught between the step and truck, bruising and cutting the foot

in such a manner to necessitate the doctor taking several stitches. The other boys succeeded in getting out uninjured.

John Peltz is home on a furlough at present. John has been at Camp Funston for sometime and this is his first visit home.

Mrs. M. Hutton is nursing a pretty sore wrist as the result of a cut which she received while taking the top off of the chicks drinking fountain. The tank of the fountain is glass and in trying to remove the top the tank broke, cutting the wrist so badly that the doctor took several stitches to close the wound. At this time Mrs. Hutton is getting along nicely.

Several auto loads of picnickers went to the Ridge Sunday and all went merry as a marriage bell until within a few miles of town when they were caught in the rain and hail storm, which swept the north part of the county. They labored along until they reached Sand Canon, which was filled with water and as none were provided with life savers, all decided to stay where they were for the night, so they hid themselves to the Andrews home, a short distance away, where there was a large barn and the whole bunch, about 30 in number, remained until morning, when the water had subsided sufficiently so they could cross the canon and they returned to their homes none the worse for the experience.

Bill Elder was considerably bruised Sunday evening as he was returning from Pine ridge. Bill was driving a car in which there were several others and as they were coming down a hill the car skidded and upset. Mr. Elder was caught in some way and badly bruised. He was immediately hurried toward town and a phone sent to a doctor to meet them. On reaching the canon they could not cross and he was taken to the Gaseling home. The doctor started and when he reached the canon the water was so deep he was compelled to return home and wait until morning, when he again attempted to reach the injured man and succeeded. He found him badly bruised but no bones broken.

There was a very pleasant gathering at the Hopkins home in this city Saturday evening, the occasion being a shower for Miss Christina Gaseling, who is soon to be united in marriage to Will Elder. The shower was in the way of a surprise to Miss Gaseling. She was the recipient of many useful and valuable gifts. The evening was delightfully spent and light refreshments were served. All present report a very pleasant time.

Milton Danborn came up from Alliance Sunday and visited at the parental home until Monday.

Word comes from Walter Marshall saying that he and Leo T.ohy are both somewhere in France.

TO PRESERVE EGGS

The department of poultry husbandry of the University of Nebraska recommends the waterglass and lime methods of preserving eggs.

Waterglass solution is made in ratio of one to nine, as follows: One quart of waterglass or sodium silicate to nine quarts of boiled water, that is, water that has been boiled and cooled. Allow about two inches of this solution over the top layer of the eggs and place the container in a cool, dry place with a tight cover so as to prevent evaporation.

Dissolve two or three pounds of unslaked lime in five gallons of water that has previously been boiled and allowed to cool, and allow the mixture to stand until the lime settles and the liquid is clear. Place clean, fresh eggs in a clean earthenware crock or jar and pour the clear lime-water into the vessel until the eggs are covered. At least two inches of the solution should cover the top layer of eggs.

Preserve only fresh, clean unwashed eggs. Candle or test all eggs for cracks.

The caddie was an unusually quiet, solid lad with a freckled, expressionless face, and never cracked a smile. At the end of the round, in the hope of getting a compliment, the golfer said, "I've been traveling for the last six months and am quite out of practice. That's why I am in such bad form today." The caddie finally consented to smile and replied: "Oh, then you have played before, have ye, mister?"

SORGHUM TO COME BACK.

Orders have been sent to factories for three sorghum mills for Seward county. The mills will be in operation in time to handle the sorghum crop this fall. Many farmers in the county have patches of sorghum cane, and this fall for the first time in many years will see a return of the good old fashioned country sorghum. It is expected that sorghum will be used extensively as a substitute for sugar.

A dear old lady had been presented with a parrot from the Congo, and she was showing it to her old gardener. "You know, Joseph, that this parrot comes from the Congo, and the Congo parrots are so intelligent that they are almost human. This bird whistles 'Home, Sweet Home' so beautifully that the tears run down his beak." "Yes, mum," replied Joseph, "I know them parrots from the Congo. I used to have one, and it whistled 'The Village Blacksmith' so beautifully that sparks used to fly from its bloomin' tail."

HANDLING CREAM IN HOT WEATHER

The dairy department of the University of Nebraska makes the following suggestions on the handling of cream in hot weather:

To wash milk utensils, use, first, cold water for rinsing; second, warm water containing a small quantity of good washing powder for cleaning; third, boiled water for sterilizing. Wash the separator thoroly after each separating.

Use a metallic strainer; it is practically impossible to keep cloth strainers sweet and clean and free from bacteria.

Skim the milk as soon after milking as possible, and cool the cream at once. Skim a cream testing from

35 to 45 per cent butter fat. Cream of this richness keeps best, and at the same time is not so strictly that it cannot be properly stirred and accurately tested. By skimming a rich cream, more skim milk is left at home for feed, and there is also smaller bulk on which to pay express charges.

Do not mix new, warm cream with cold cream until it has been cooled in the shotgun can provided for this purpose. Keep the cans of cream in a cooling tank until time of delivery.

Deliver the cream to the creamery or cream station early in the morning, and not less than three times a week during the summer, and twice a week during the winter. Protect the cans of cream from the sun by covering with canvas or with a wet sack while en route.

Alliance's west grade school—Emerson, is being remodeled, the rooms are being re-plastered, the stairways changed, and other work being done preparatory to the opening of the fall school term on September 2.

"Astronomers tell us," said the man of statistics, "that an express train moving a hundred miles a second would consume several million years in reaching a certain star." The other man sat silent, wrapped in thought. "Did you hear me?" asked the man of statistics. "Oh, yes, I heard you," responded the other quietly. "I was just thinking what a predicament a chap would be in if he should miss the last train and have to walk."

Ford

THE UNIVERSAL CAR

Reliable mechanical attention to your Ford means more service from your car and less cost in its operation. Let us take care of your car. We have the mechanics who know how and use only the genuine Ford materials and only ask the fixed, standard, Ford factory prices. As you value the use of your Ford see that it is kept mechanically right.

Coursey & Miller

Successors to Keeler-Coursey Co.

A HARROUN CHASSIS

is now on display and we invite all to come and examine HARROUN construction with details and fundamentals of design that are New, Exclusive and Notably Advanced.

This car continues to be the center of expert interest---and there must be a reason

The answer is clearly indicated by this construction: Top valve—Long stroke motor—Racing type detachable cylinder head—Three-bearing balanced crankshaft—Special and exclusive oiling system, including racing type oil cooler and new design, non-oil pumping pistons—Impelled thermo-syphon cooling with honeycomb radiator—Willard storage battery—Stewart vacuum feed to Stromberg carburetor—Stewart-Warner speedometer—racing type, shock-absorbing steering wheel—Full-floating rear cantilever springs, length 40 inches—Special frame design 6-inch vertical section—27-foot turning radius—Portage tires, Timken bearings thruout.

The Whole Harroun Car HAS MADE GOOD

An owner recently wrote:

"—the roads are snowy and bad, but the HARROUN sure goes thru just the same. We went to Cripple Creek last week and the first eleven miles from the ranch there was no road, but we made road thru and climbed hills that looked impossible."

50% Better Results Obtained from Trees Delivered in the Fall

I have been growing and planting trees for more than a quarter of a century under all kinds of soil and climatic conditions, and I have found that better results are obtained by at least FIFTY PER CENT where trees are obtained in the Fall in our Western country.

The time to order trees for Fall Delivery is now; telephone or mail us a card, and a descriptive Catalogue of the best trees, both shade and fruit, and all manner of vines and shrubbery will be sent you.

Select the ones you want and they will be delivered to you with printed instructions as to how to care for them when the proper time arrives to make delivery.

The rapid growth in our City Park is positive proof that trees will grow to maturity here in a very few years if they are planted at the proper time and have been given the proper care and attention. I have cared for these trees, and am in a position to instruct you so that you can have as good or better results than I had with the park.

Don't envy the man who has fine trees and shrubs around his home—grow some of your own and increase the value of your property several Hundred Dollars by the investment of a small amount.

A tree has been dug out of the Nursery has a certain amount of work to do before it can commence to grow in the top, so by procuring the tree in the Fall it has all of the time from October to April to leisurely do it; consequently the Fall trees are ahead of the Spring ones several months and besides you are sure that the Fall tree has not gone thru very many hands before it reaches the planter, while the Spring tree has a chance to go thru the trade, and has undergone several transfers, so that you do not know how the tree has been wintered; it may be physically dead and not show the least sign of it, while the Fall tree you know has not the time to undergo many changes, and too, they are just going into dormancy, while the Spring tree is just coming out of it, making it a more critical time to handle. By all means get them in the Fall and then you will know how they have been WINTERED.

PLACE YOUR ORDERS NOW—DELIVERY WILL BE MADE AT THE PROPER TIME AND YOUR TREES WILL BE OUT IN LEAF WHILE YOUR NEIGHBOR, THAT ORDERED FOR SPRING, WILL BE WAITING AND WATCHING FOR HIS TO ARRIVE.
