THE PLANET URANUS

se Interesting Things a Voyage to If Uranus, which is a star of about the sixth magnitude, were a planet like those little ones called asteroids, which are being discovered by the dozen every year, it could not have much claim upon popular attention. But Uranus is really a gigantic world, more than 60 times as large as ours. Its vast distance, now about 1,700,000,000 miles from the earth, is what causes it to look so small. Uranus has four moons, which revolve backward in their orbits—that is to say, they revolve from east to west around Uranus, while Uranus goes, like all the other planets, from west to east around the sun. It is believed that Uranus rotates backward on its axis also. Moreover, the axis of that great, strange globe lies in such a direction that in the course of its year, which is equal to 84 of our years, the sun shines almost perpendicularly first upon one pole and then upon the other. Measured by our time standard, there are 40 years of constant daylight, followed by 40 years of unbroken night, around the poles of Uranus. And the sun rises in the west and sets in the east there. But the sun looks very small when viewed from Uranus—only one four-hundredth as large as it appears to us. Still it sheds upon that planet 1,500 times as much light as the full moon sends to the earth, so that daylight upon Uranus, while faint compared with the blaze of

very respectable kind of illumination. It is a pity that the telescope is able to show us very little of the detail of the surface of Uranus. Some faint bands or belts, just visible with the most powerful instruments, are all that can be made out. If we could visit Uranus, we Hershey & Co. should probably be greatly surprised, if not greatly disappointed. Its average should probably be greatly surprised, if density is but a trifle in excess of that of water, and of course its surface density is far less.

a terrestrial noonday, is nevertheless a

A voyager from the earth landing on Uranus would probably sink almost as rapidly as if he had leaped upon one those round white thunderclouds which, piled high in air, look so solid and snowy cool on a July afternoon. He Uranus is that that planet is still in a Special. vaporous or liquid condition and exceedingly hot perhaps. If so, it may in the course of future ages contract and condense and cool until it comes into a condition resembling the earth's. Will vital forces then become active upon it and produce a long succession of living species, brightening its dim daylight with the color of flowers and the ceaseless activity of animate existence? It is not likely that man will ever be able to answer that question, but who that looks upon Uranus keeping step with the earth to the music of the sun can help asking it?-Garrett P. Serviss in

Jangling Plane Strings.

Another case occurred in a house where I was once stopping in Nova Scotia. A piano with a bad note was fixed by simply opening an inside shutter of a bay window at the opposite side of a parlor from the piano. The latch of one shutter was lightly resting against the edge of another and caused the jangle when one particular note was struck. The lady player had previously declared that she would send for a tuner the next day and laughed at my attempt to fix it by hunting about the room while she pounded. However, she did not conceal her surprise when the trouble was removed and admitted that there was something about this sound business

that she did not quite understand. In regard to locating these jangles, however, I will say that it is not always so easy. It requires some practice before the ear becomes capable of locating with any degree of success the direction of sounds of this kind. This was my experience with the first piano jangle, that of the cracked globe, which was quite difficult. That of the window shutter was easier as well as many others which I have located since. A cor-Popular Science Monthly.

Shoes and other articles besides baskets and cabinets are manufactured from birch bark by the Russian peasantry. The bark from which these articles are made is from the inner skin of the Russian birch tree, common in almost all parts of the empire. It is gathered spring and fall, and the process is a very simple one. An incision is first made around the trunk of the tree, and the peasants have a knack of tearing or unwinding the bark from the starting point, which gives them a strip of even width that they wind into a ball and keep through the winter until it is dry cobblers who travel from house to house, using the peasants' own materials.-

Philadelphia Ledger. The Acme of Forensic Force. "And now, gentlemen of the jury," shouted the young lawyer, running his long fingers through his flowing locks, "now, gentlemen of the jury, I ask you as men and as citizens of this great and glorious republic if the spotless character of my client is to be permitted to suffer from the words uttered by thatby that-by that vermiform appendix who sits in the witness box with perjury stamped all over him!"-Indianapolis Journal.

Used to It. The prophets tell us that we shall all travel by airship one of these days, but the experience will not be a novel one to those who have lived on heirships all their lives. - Newport News.

Increase of Suicides In Austria. The increase in the number of suicides in Austria, which is stated to have been very marked in the sixties and seventies, fell off in the 10 years 1880-90. Since the latter date, however, it has again become noticeable. In 1891 the number of suicides was 872, in the following year it was 903, and last year it reached

selves preparations are started for the most disgusting orgies. Simpson, who, having married a full blooded "Klootchman," is what is known as a "squawman," has been specially favored or trusted by being permitted to witness some of these rites and gives a terrible description of what is known to the Indians as a "man eater dance," which he witnessed a few months ago. In this dance the manists, or chief character, horrifies the spectators by appearing with a "mummy" or the shriveled remains of a back number native, taken from an eminence upon which it was exposed to dry after death, and tearing the shriveled flesh from the bones as he dances about a huge log fire, all the time uttering the most frightful sounds in the Indian vocabulary of lamentations. Simpson also lately saw the horrible torture of a maiden in connection with another dance, in which, to prove herself worthy to be the bride of a brave chieftain, she allowed great barbed hooks to be driven through the flesh of her back and danced almost naked, while the chief held the reins attached to the hooks and by a series of wrenches eventually tore the flesh apart and released them. Missionaries have taken great credit throughout the civilized world for having converted these savages, and the government has been led to believe that the dances now carried on are only imita-
