is prevented by vaccination before the germ of the disease has entered is prevented by vaccination before the germ of the disease has entered the system. The success of vaccination depends upon proper dosage. Too large a dose will produce the disease while too small a dose will not render the animal immune. This problem is solved by Parke, Davis & Co. in their new vaccine in pill form which is injected through the skin. No mixing, filtering or time wasted and you don't have to spend a fortune to vaccinate your cattle. P. D. Co, book, "Blackleg and its Treatment." free

The board of county com-

missioners is composed of James S. Robbins, M. L. McCullough and John D. Keliher, the latter taking the oath of office yesterday. Mr. Robbins was appointed to fill the vacancy caused by the resignation of L. Carpenter, and by virtue of the appointment becomes the chairman of the board. To have two new men on the board at the same time is something that has not occurred in Lincoln county for many years. Mr. McCullough has been a member of the board for two years and during that time has attained a thorough insight into county business. He is therefore in position to acquaint the new members with the exact condition of affairs.
