There is a Wonderful Difference

between the light afforded by an ordinary carbon incandescent and the brilliancy of our new General Electric MAZDA lamp. The latter radiates two and one-half times as much light with the same amount of electric current.

A 40-Watt MAZDA Affords Twice the Light

of the 50-watt carbon lamp now in general use and costs one-fifth less to burn. We recommend its use to our customers as it more than cuts their light bills in two, making electric light so inexpensive that no home, however humble, and no store, however small, can afford to be without it.

Ask us to show you the new General Electric MAZDA lamps and clusters.
