REST AND PEACE

Upon Distracted Households Fall When Cuticura Enters.

Sleep for skin tortured bables and rest for tired, fretted mothers is found in a hot bath with Cuticura Soap and a gentle anointing with Cuticura Ointment. This treatment, in the majority of cases, affords immediate relief in the most distressing forms of itching, burning, scaly, and crusted humors, eczemas, rashes, inflammations, irritations, and chafings, of infancy and childhood, permits rest and sleep to both parent and child, and points to a speedy cure, when other remedies 150 Miles an Hour Thought Posfail. Worn-out and worried parents will find this pure, sweet and economical treatment realizes their highest expectations, and may be applied to the youngest infants as well as children of all ages. The Cuticura Remedies are sold by druggists every-

BUILD PANAMA ROAD Government to Parallel Canal

With Railroad to Control Land.

Minister of Foreign Affairs Confers With President Taft and Secretary of State Knox - English Capital Sought Line.

Panama .- By a contract signed the other day Uncle Sam embarks in the business of railroad building in Latin America. American engineers are to undertake at once the survey of the Panamanian link in the Pan-American railroad, 300 miles from the city of Panama to David, the commercial center of the northern end of the republic, and by the time the national assembly meets next fall the government will have ready to submit a proposition for the construction of the line as an extension of the present Panama railroad, which is the property of the United States.

The argument with which Panama has prevailed upon the United States to go outside the limits of the canal zone and build railroads for the isthmian republic is in brief this:

"Either the American government shall build this link in the international railroad system in order to control the approaches by land to the Panama canal, or English, French or German capital will do it, and America will have just so much more to do to fortify the water way."

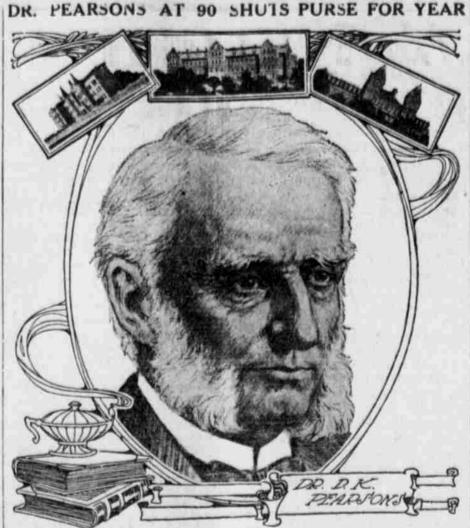

English capital was bldding for the line through W. Harcourt Palmer, an Australian engineer, who has established here a manufactory for his safety explosive, "Palmerite," which the canal commission is adopting as a substitute for dynamite. Palmer has been the American government's foremost competitor, and Panamanian ofthat Palmer's bid has been used as a club upon the state department and President Taft.

Conclusion of this railroad deal with Sato Lewis, Panamanian minister of foreign affairs.

President Obaldia recalled him to as on the canal. Panama. He was assured in Washing-

EXPECT HIGH SPEED

don.

HICAGO .- Dr. D. K. Pearsons, the noted philanthropist who has given millions to the small colleges of the west and south, has just reached his ninetleth birthday, and is as hearty and energetic as many a man 20 years his junior. His birthday resolution was to shut up his purse for one year in order to give five of the institutions he

has helped a chance to make good. For 12 months he will make no gifts, and then, he says, after paying off "his debts," he will leave the little he has left to his children. By his children the philanthropist means the 47 colleges in 24 states which he has helped from poverty to prosperity.

ficials have not hesitated to declare | that the agreement could be completed in Panama, and this has just been accomplished.

Details of the contract have not been announced; in fact, the secrecy Uncle Sam was the principal object of maintained by the Obaldia governthe recent visit to Washington of ment with reference to the railroad plans has been criticized severely, and opponents of the government wish to He had reached an understanding know upon what terms the republic is with President Taft and Secretary to be bound up with the United States Knox, when the unexpected death of in affairs within the republic as well

This Fact - that in addressing Mrs. Pinkham you are confiding your private ills to a woman -a woman whose experience with women's diseases covers twenty-five years.

The present Mrs. Pinkham, daughter-in-law of Lydia E. Pinkham, was for years under her direction, and has ever since her decease continued to advise women.

Many women suffer in silence and drift along from bad to worse, knowing well that they ought to have immediate assistance, but a natural modesty causes them to shrink from exposing themselves to the questions and probable examinations of even their family physician. Such ques-tioning and examination is unnecessary. Without cost you can consult a woman whose knowledge from actual experience is great.

MRS. PINKHAM'S STANDING INVITATION:

Women suffering from any form of female weakness are invited to promptly communicate with Mrs. Pinkham at Lynn, Mass. All letters are received, opened, read and answered by women. A woman can freely talk of her private illness to a woman; thus has been established this confidence between Mrs. Pinkham and the women of America which has never been broken. Never has she published a testimonial or used a letter without the written consent of the writer, and never has the company allowed these confidential letters to get out of their possession, as the hundreds of thousands of them in their files will attest.

Out of the vast volume of experience which Mrs. Pinkham has to draw from, it is more than possible that she has gained the very knowledge needed in your case. She asks nothing in return except your good will, and her advice has helped thousands. Surely any woman, rich or poor, should be glad to take advantage of this generous offer of assistance. Address Mrs. Pinkham, care of Lydia. E. Pinkham Medicine Co., Lynn, Mass.

Civilization and Missions.

There is a question that is larger than government or trade, and that is the moral well-being of the vast millions who have come under the protection of modern governments. The representative of the Christian religion must have his place side by side with the man of government and trade, and for generations that representative must be supplied in the person of the foreign missionary from America and Europe. Civilization can only be permanent and continue a blessing to any people if, in addition to promoting their material well being, it al.9 stands for an orderly individual liberty, for the growth of intelligence and for equal justice in the administration of law. Christianity alone meets these fundamental requirements. The change of sentiment in favor of the foreign missionary in a single generation has been remarkable.

Evidently Not.

They had met at Bluepoint, L. L. two years before and were celebrating it by a little dinner at a cafe.

"I shall never forget how we be came acquainted," he was saying. "So romantic. In swimming. That was when I first saw you. You went into three feet of water and got frightened. I rescued you from a watery grave and we were friends at once." He called the waiter. "Bring me the wine list," he said, explaining. "Because we began our acquaintance in a watery way, it needn't always be watery ..."

Apart-Motive Power Would Have to Be Electricity.

sible by English Expert.

Success of Plan Would Bring New

York and Chicago But Six Hours

London. - Should J. Sutherland Warner, a prominent English railway expert, see his ideas practically realized there will be no denying that we are living in a fast age. He is authority for the assertion that a speed of 150 miles an hour by railway trains is technically possible today. and will be commercially feasible with in the next ten years, so long as the railway serves great centers of population yielding a large amount of traffic.

"The motive power ,of course, would have to be electricity," said Mr. Warner. "Naturally, too, the high horse power required for the attainment of such speed would necessitate motors of enormous size and weight. In order to carry such tremendous weight safety it would probbly be necessary to use three, if not four, ralls.

"The great problem, however, would be how to deal with the resistance of the air. There are three methods by which this could be met. One of these would be to construct the train cigarshaped, with the sides of the carriages olled or varnished so as to make them as smooth as possible.

"Another way would be to reduce the friction on the track by fitting wings, or lifting planes, all around the train, the object being to utilize the resistance of the atmosphere to lift the weight from the track and thereby reduce the track resistance.

"The third method would be not to run the train through the air at all. This could be done by runing it in a tube from which the air had been exhausted in advance of the speeding train by powerful pumps.

"Of course, in addition to the driving of the electric motors in the ordinary way, power for propulsion would be obtained owing to the pressure of the atmosphere acting on the rear of each carriage. That also would supply air for the passengers to breathe. None of the methods are impossible. It is all merely a matter of money.

"I am dubious about all the claims advanced for the monorail system. The horsepower required for high speed means weight, and the monorall cannot stand the weight. Therefore, the contention that such a system can by heat at 131 and even 122. attain any speed up to 200 miles an hoat seems not to have a very solid such a system, too, would be extremely high. I believe that in ten years we will see trains making a hundred and fifty miles an hour on regular

schedule." If Mr. Warner's plan attains materialization it would mean New York to Chicago in little more than six hours.

crease the length of trains, and those to be put in service will be 600 feet in length, comprised of 12 coaches with seating capacity of 1,200 passengers. The company also is considering the question of the abolition of straphanging. But even if the straps are removed from the cars there will be handles attached to the seats for the convenience of those passengers who may have to stand up.

Historic Papers Found.

Los Angeles, Cal.-A number of Interesting documents recovered from an outlaw's hut near Ferris, among them a letter written by Gen. U. S. Grant during the siege of Vicksburg, have been received here. The Grant letter was addressed to General Parks and conveyed orders relative to the operations in front of the Confederate stronghold. The others were papers supposed to have been stolen from Gen. Manuel Garcia of the Mexican army. That the papers had been secreted in the hut for many years was shown by their condition. Sergeant Sebastian of the police department received the letters from a friend, who found them hidden in a crevice of the hut. They will be turned over to a historical association.

versy The defendants had been holding fine you one dollar." the animal in lieu of payment for a capital operation which had been performed by the physician to save Billy's life.

It was stated at the conclusion of the supreme court against Mrs. Hastion on the feline for appendicitis. In awarded the cat to Mrs. Hastings. Some weeks ago Mrs. Hastings took

the cat to the hospital for treatment. The cat was pronounced to be suffering from abdominal trouble, presumably appendicitis, and an operation was performed. Later the woman refused to pay the fee for the operation and then the trouble began.

Dynamite for Plowing.

Spartanburg, S. C .-- J. Henry Caldwell, farmer, broke up an acre of land with 800 charges of dynamite, the explosive being used instead of a plow. He says that blasting land with dynamite is the best method for subsoiling and that it can be done more cheaply than by manual labor. Many persons from the city and the country were present to view the experiment.

It appears from the evidence that Mr. Rung, who is a stereotyper, sat down to luncheon with Edward Snider, a fellow employee. The piece de resistance of Rung's luncheon consisted of court that a suit may be instituted in limburger cheese, and Snider, who regards himself as something of a wag. tings to recover a fee for an opera- had made certain remarks about the cheese, reflecting particularly on its the meantime, however, Judge Conlan odor. Thereupon Mr. Rung smeared a piece of the cheese over the humorous Snider's countenance.

"This," said Rung, as he stepped up to pay his fine, "is the kind of justice that smells to heaven."

"That will be about all from you," said the court bailiff; "cheese it!"-Chicago Record-Herald.

Getting Old.

"Was your wife pleased with that birthday gift you took home last night?"

"Dee-lighted! She said that I didn't seem to have a thing to do but to sit around and remember her birthdays."

Strength of Legs Differ.

"Mathematics? I should say not. He hasn't any more of a head for figures than I have, and learning the multiplication table was the hardest work I ever did in my life."

"In what branch of science does he seem to be particularly interested?" "He isn't interested in science at all; but the other day a friend of mine who has a big automobile left the machine standing in front of my house for more than half an hour, and, although the boy was playing around outside all the time he did not wnce

climb into the automobile or even took the horn."

Just the Job.

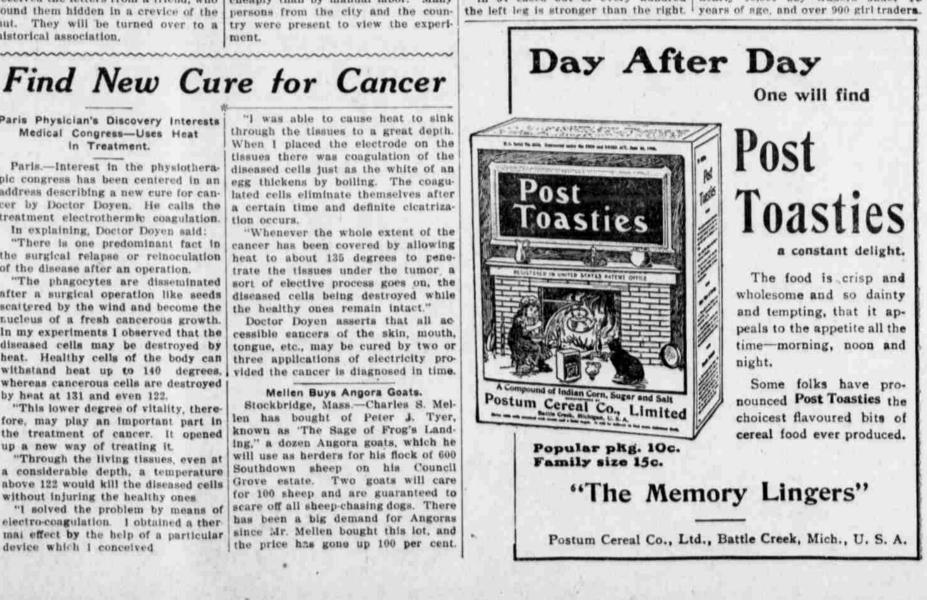

Old Argus was boasting about him hundred eyes

"A useful man for an office," cried the populace.

"Yes," added Argus, "and I can keep half of them closed when I want to. Here the populace clapped their hands wildly.

"We'll make him custom-house inspector," they declared.

In the London streets there are nearly 10,500 boy traders under 16

Paris Physician's Discovery Interests Medical Congress-Uses Heat

In Treatment. Paris .- Interest in the physiotherapic congress has been centered in an address describing a new cure for cancer by Doctor Doyen. He calls the treatment electrothermic coagulation. In explaining, Doctor Doyen said:

"There is one predominant fact in the surgical relapse or reinoculation of the disease after an operation.

"The phagocytes are disseminated after a surgical operation like seeds scattered by the wind and become the nucleus of a fresh cancerous growth. In my experiments I observed that the diseased cells may be destroyed by heat. Healthy cells of the body can whereas cancerous cells are destroyed

"This lower degree of vitality, therefore, may play an important part in foundation. The expense of running the treatment of cancer. It opened up a new way of treating it.

"Through the living tissues, even at a considerable depth, a temperature above 122 would kill the diseased cells without injuring the healthy ones.

"I solved the problem by means of electro-coagulation. I obtained a ther has been a big demand for Angoras mai effect by the help of a particular device which 1 conceived

through the tissues to a great depth. When I placed the electrode on the tissues there was coagulation of the diseased cells just as the white of an egg thickens by boiling. The coagulated cells eliminate themselves after a certain time and definite cicatrization occurs.

"Whenever the whole extent of the cancer has been covered by allowing heat to about 135 degrees to penetrate the tissues under the tumor, a sort of elective process goes on, the diseased cells being destroyed while the healthy ones remain intact."

Doctor Doyen asserts that all accessible cancers of the skin, mouth, tongue, etc., may be cured by two or three applications of electricity prowithstand heat up to 140 degrees, vided the cancer is diagnosed in time.

Mellen Buys Angora Goats.

Stockbridge, Mass .-- Charles S. Mellen has bought of Peter J. Tyer, known as 'The Sage of Frog's Landing," a dozen Angora goats, which he will use as herders for his flock of 600 Southdown sheep on his Council Grove estate. Two goats will care for 100 sheep and are guaranteed to scare off all sheep-chasing dogs. There since Mr. Mellen bought this lot, and the price has gone up 100 per cent.
