

A PACKAGE MAILED FREE ON REQUEST OF

MUNYON'S PAW-PAW PILLS

The best Stomach and Liver Pills known and a positive and speedy cure for Constipation, Indigestion, Jaundice, Biliousness, Sour Stomach, Headache, and all ailments arising from a disordered stomach or sluggish liver. They contain in concentrated form all the virtues and values of Munyon's Paw-Paw Tonic and are made from the juice of the Paw-Paw fruit. I unhesitatingly recommend these pills as being the best laxative and cathartic ever compounded. Send us a postal or letter requesting a free package of Munyon's Celebrated Paw-Paw Laxative Pills, and we will mail same free of charge. MUNYON'S HOMEOPATHIC HOME REMEDY CO., 53d and Jefferson Sts., Philadelphia, Pa.

DAISY FLY KILLER placed anywhere, above a hole in the wall, ceiling, or window, kills all flies, mosquitoes, and other insects. It is safe for all persons, and does not stain or injure anything. Guaranteed to kill. Of all dealers or send for sample. Write to: MUNYON'S HOMEOPATHIC HOME REMEDY CO., 53d and Jefferson Sts., Philadelphia, Pa.

Thompson's Eye Water

HE LIVED IN THE CITY.

Papa—Why can't we see the moon in the daytime? Jimmie—Cause they don't light it up until after dark.

Aims and the Man. "Sure Father Flaherty was a good man," Mr. Murphy said of the deceased parish priest. "He hated sin but he loved the sinner, an' he was all compassion an' patience an' wisdom. There never was another loike 'im 't holdin' up hope to th' poor battered man that had anny desire 'r good."

"An' that keen," continued Mr. Murphy, "twas niver worth while to keep back part of th' price of th' land! Wid a twinkle in his eye he'd see clean through anny Ananias that iver walked."

"An' gin'rous!" Mr. Murphy's voice dropped to a lower key and his eyes were wet as he added, "His hand was always in his pocket, an' when they prepared him 'r burial they found his right arm longer than his left wid stretchin' it out to th' poor."—Youth's Companion.

How She Conciliated Them. Filmer—How did it happen that these five men who were so angry with the woman in the nickelodeon for not taking off her hat became so friendly with her afterward? Screeners—It was raining like fury when the show was over and she invited them to take shelter with her under her hat.

HARD TO PLEASE Regarding the Morning Cup.

"Oh how hard it was to part with coffee, but the continued trouble with constipation and belching was such that I finally brought myself to leave it off."

"Then the question was, what should we use for the morning drink? Tea was worse for us than coffee; chocolate and cocoa were soon tired of; milk was not liked very well, and hot water we could not endure."

"About two years ago we struck upon Postum and have never been without it since."

"We have seven children. Our baby now eighteen months old would not take milk, so we tried Postum and found she liked it and it agreed with her perfectly. She is today, and has been, one of the healthiest babies in the State."

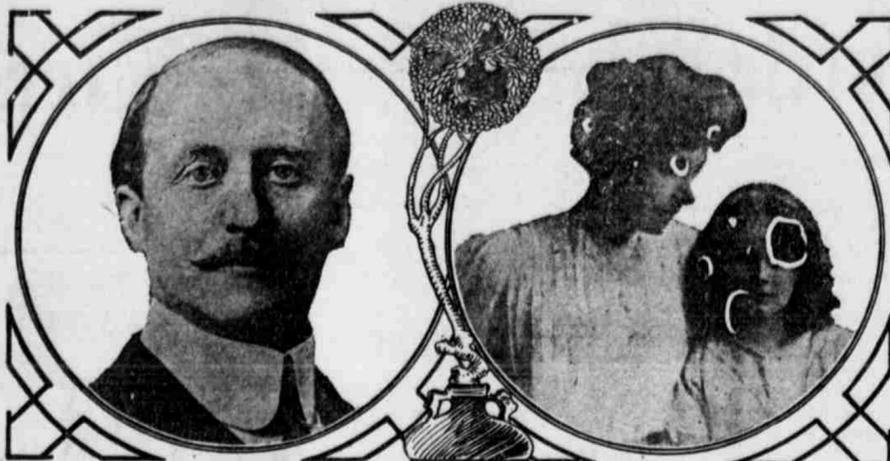

"I use about two-thirds Postum and one-third milk and a teaspoon of sugar, and put it into her bottle. If you could have seen her eyes sparkle and hear her say 'good' today when I gave it to her, you would believe me that she likes it."

"If I was matron of an infants' home, every child would be raised on Postum. Many of my friends say, 'You are looking so well!' I reply, 'I am well; I drink Postum. I have no more trouble with constipation, and know that I owe my good health to God and Postum.'"

"I am writing this letter because I want to tell you how much good Postum has done us, but if you knew how I shrink from publicity, you would not publish this letter, at least not over my name."

Read the little book, "The Road to Wellville," in pkgs. "There's a Reason" Ever read the above letter? A man appears from time to time. They are genuine, true, and full of human interest.

WILL RULE INDIA FOR BRITAIN

SIR CHARLES HARDINGE, who has just been made viceroy of India, is fifty-two, entered the diplomatic service 30 years ago, and has had a most distinguished career. Amongst other positions he has held are those of charge d'affaires at Washington, at Sofia, at Bucharest, and in Paris. In 1908 he went to St. Petersburg as secretary to the embassy. Five years later he came home, to return to St. Petersburg in the following year as ambassador. Hon Lady Hardinge, whose marriage took place in 1890, was Hon. Winifred Sturt, daughter of the first Lord Arlington. Her only daughter, Diamond, was born in 1900. Sir Charles may be said to have a hereditary interest in the viceroyalty of India, as his grandfather, the first Viscount Hardinge of Lahore, was governor general of that country from 1844 to 1848. The news of his appointment has been warmly welcomed in India.

RUSSIANS LIKE U. S.

Emigrants Favor This Country in Preference to Siberia.

Problem Engages Attention of Able Muscovite Writers and Economists, Who Advise Authorities to Check Outflow.

St. Petersburg.—On the question of emigration and immigration a considerable change has come over the world during the last forty years, new countries being more careful about the sort of immigrants they receive and old countries being more concerned about the sort of emigrants they part with. Forty years ago the British government looked on emigration much as the doctors of those days looked on blood-letting. Now it looks on emigration, even from Ireland, as the doctors of these days look on blood-letting. Russia is now beginning to do the same, judging from a series of articles entitled "The Future of Russian Emigration to America," which has been appearing in the Novoye Vremya of St. Petersburg, from the pen of Julius Neidoff. Mr. Neidoff, who has personally investigated this problem for many years in America, thinks that the Russian government should do all in its power to get its stream of immigration directed toward Siberia. Instead of toward New York, and that if a section of the Russian immigrants insist on going to America in any case the Russian authorities should do all in their power to make that section consist of men who will come back and in due time enrich their fatherland with the experience, the money, the knowledge of agriculture and of industry which they have picked up abroad.

He fears, however, that the stream of emigration which is flowing America-ward cannot be stopped and he calculates that it will soon consist of half a million persons yearly from Russia alone. As he also calculates that the British, German, Italian and Austrian emigration to America will shortly fall to insignificant figures, it is probable that this great wave of Slavonic immigration will be the last great billow of the kind that will strike the United States. It would be interesting, therefore, to speculate on the effect which this addition of Slav blood will have on the ultimate American type. It will probably make that type more dreamy, philosophical and artistic, and consequently improve it.

Tidal Effects on the Land

Delicate Seismographic Instrument Shows That Buildings Salute Twice Each Day.

London.—As a result of a series of experiments recently carried out by Professor Milne, the pioneer of modern seismology, it is now known that twice each day at high tide the buildings along opposite sides of tidal basins salute each other.

The experiments were carried out at Bidston observatory, near Liverpool, one and a half miles from the sea, with a modified form of seismograph designed to record tidal effects and the more minute movements which other seismographs would not or could not record. The instrument recorded photographically, a tilt on the pillar supporting it causing a definite deflection on the film.

From the very first the instrument gave very clear and definite records of the strange effect of the tides. Twice a day the recording needle swung in one direction, showing that the steepness of the hillside on which it rested was increasing.

At high tide the bed of the Irish sea became depressed from an increased load, and the effect of this was to pull the shores together. The amount of this change was not very great, although much greater than might have been expected. At Bidston the amount of deflection was about equal to one inch in sixteen miles.

BILLS TO INCREASE BABIES

Measures Intended to Burden Bachelors Are Offered in French Parliament.

Paris.—Prof. Lannelongue, senator and member of the institute of France, has introduced in the senate legislative measures designed to increase the birth rate of France, following the result of the census recently completed under the direction of M. Bertillon, the statistician. The senator proposes: 1. Additional military service for celibates more than twenty-nine years old. "If they will not serve their country by rearing children they must serve it in other ways," says Professor Lannelongue.

2. Obligatory marriage for all government employees, high and low, more than twenty-five years old, because "functionaries should set an example to other citizens." The senator urges that all government salaries be made adequate for the support of a family. 3. Give the father the right to bequeath his property without restrictions, repealing the present law requiring an equal division among the children. "This removes the father's fear that the fortune will be dissipated among many children and also accustoms the children to relying upon their own powers instead of waiting for their patrimony."

Professor Lannelongue's project is supported by many members of the five learned academies constituting the institute of France.

Cut Pacific Coast Forests

They Will All Disappear in Thirty Five Years if Present Rate is Maintained.

Seattle, Wash.—From the reports of all the counties in the timbered section of Washington it is shown that there are 213,000,000,000 feet of standing timber in the state. The reports were made by cruisers for taxation purposes and are believed to be accurate.

This immense forest is being made into lumber at the rate of 6,000,000,000 feet a year. At the present market price the lumber made last year was worth \$15 a thousand, making the cut for 1909 valued at about \$90,000,000. It is estimated that fully two-thirds, or \$66,000,000 represents the amount of money paid to labor.

According to the latest statistics, Washington leads in the production of

lumber, and during 1909 shipped 45,000 cars of shingles and 85,000 cars of lumber. The lumber and shingles totaled 1,800,000,000 feet. Over 1,200,000,000 feet of lumber was sent to foreign parts and to coast towns, and this, added to the home consumption, or 1,600,000,000, makes the annual production of lumber by the sawmills of the state total over 6,000,000,000 feet.

One-half the area of the state of 35,000 square miles is timbered. The timber of the state would make a plank road three inches thick and 500 feet wide around the earth. It would load 10,000,000 cars of 200,000 feet each 45 feet long, equal to 85,227 miles of trains. These cars would reach nearly three and one-half times around the world.

A six or eight-room house for five people each requires about 40,000 feet of lumber. The timber of this state would build 5,000,000 such houses, which would be sufficient to house one-third of the population of the United States.

The density of the forests of Washington is unequalled in any other section of the world. In Clallam and Chehalis counties, according to official estimates, the entire timbered area runs 20,000,000 to the square mile. The stand on smaller areas is phenomenal. In Clallam county one acre was recently found to have 300,000 feet of standing timber.

A Pacific county mill cut 500,000 feet of logs from a little less than two acres. The logs average from 12,000 to 15,000 feet each, and would present a serious problem to the mill equipment of the timbered section of the upper Mississippi region.

Locusts Grease Rails. Scranton, Pa.—Millions of seven-year locusts have invaded the village of Peckville, near here, and the valley is being rapidly devastated of vegetation by the pests.

From early morning until sundown the noise made by the whirring of the locusts is all pervading, and can be heard a mile, sounding like the far-away blowing of a factory whistle.

They have covered one of the little coal branches of the Ontario & Western railroad, swarming around the rails, which gather and retain heat during the day, until it is impossible to operate the road, and tons and tons of coal are standing on the sidings because the locomotives can make no headway against the slippery bugs.

She Lives in Bingville. A south Missouri paper is carrying this ad: "Attractive woman, not a day over thirty, would be pleased to correspond with eligible man. Not absolutely necessary that he should be young. Would prefer one with prop erty, but one with a good paying position would be satisfactory. The young lady is of medium height, has brown hair and gray eyes, not fat, although, most decidedly, she is not skinnier. Her friends say she is a fine looking woman. Object matrimony. Reason for this advertisement, the young woman lives in a little dinky town, where the best catches are the boys behind the counters in the dry goods and clothing stores, and every one of them is spoken for by the time he is out of his short pants. Address Hazel Eyes, Box 23, Bingville, Mo.—Kansas City Star."

ROUTT COUNTY, COLORADO, LAND BOOM PREDICTED.

Keen observers predict a big boom in property in Wantland, Colorado, the new town which is being built in the center of the Little Snake River Valley in Routt County, Colorado. A big irrigation system is being built to irrigate 60,000 acres of very fine land surrounding Wantland. The land is being sold by the State of Colorado for 50 cents per acre, under the Carey Act, and water rights cost \$35.00 an acre, in ten year payments. Sugar factories, flour mills, canneries, etc., are among the possible industries to be located at Wantland. Full information can be obtained from the Routt County Colonization Company, 1734 Welton St., Denver, Colo.

Protected. Stella—Are you afraid of cows? Bella—Not with my hatpins.—New York Sun.

Lewis' Single Binder straight 5c cigars made to satisfy the smoker.

And many a coming man neglects to arrive.
