The Zodiacal Light.

There is a strange light in the heavens appearing after sunset in the late winter and in spring and before sunrise in the autumn, but few persons in our latitudes have ever seen it. In the equatorial regions, however, and in certain parts of the tropics the zodiacal light appears with great splendor, and some remarkable views of it were obtained by a French expedition to the interior of the Sahara, undertaken for the purpose of studying the effects of the unclouded sun on the dry air of the desert. The mysterious light, in the form of a vast triangle, rising high in the heavens, appeared nearly three times as bright as the Milky way. Science has not entirely solved the problem of the origin of this light, but it is thought that it is an appendage of the sun.—Harper's Weekly.

Hedgehog as Food.

The hedgehog as food is even more neglected than the frog, yet those who have tasted a properly cooked hedgehog proclaim it the best eating of all our native wild animals. According to Mr. Harwood Brerley, "the hedgehog may be stewed or spit-roasted, toasted or roasted. But it tastes best baked in clay in a wood fire. * * * As the incrustation comes off it brings also the adhering spines and all the skin, leaving a luxurious little joint complete, emitting an appetizing reminder of anything from hare to young pork. The hedgehog so treated consists of white, sweet, tender flesh, nowise inferior to sucking pig or a young chicken, the flavor being even more delicate than the savor."—London Chronicle.
