

GIRLS! GIRLS! TRY IT, BEAUTIFY YOUR HAIR

Make It Thick, Glossy, Wavy, Luxuriant and Remove Dandruff—Real Surprise for You.

Your hair becomes light, wavy, fluffy, abundant and appears as soft, lustrous and beautiful as a young girl's after a "Danderine hair cleanse." Just try this—moisten a cloth with a little Danderine and carefully draw it through your hair, taking one small strand at a time. This will cleanse the hair of dust, dirt and excessive oil and in just a few moments you have doubled the beauty of your hair.

Besides beautifying the hair at once, Danderine dissolves every particle of dandruff; cleanses, purifies and invigorates the scalp, forever stopping itching and falling hair.

But what will please you most will be after a few weeks' use when you will actually see new hair—fine and downy at first—yes—but really new hair—growing all over the scalp. If you care for pretty, soft hair and lots of it, surely get a 25 cent bottle of Knowlton's Danderine from any store and just try it. Adv.

Even if a man does have fairly good sense he can easily write a few love letters.

"Arouse Yourself"

Get rid of that feeling of depression, commonly known as "the blues." It is only the liver that has become lazy as a result of impaired digestion and clogged bowels. Try

KEEP THEIR HEADS STEADY

Australian Statesman Asserts Women Prevent Conditions of Political Turbulence.

The prime minister of Australia, where the women have suffrage on equal terms with men, was interviewed while on a visit to London on the results of woman suffrage in his country. He is quoted as saying:

"Women's suffrage steadies political feeling. In democratic countries turbulence is always a danger. Well, in a time of political excitement men will let themselves loose. Women won't. They don't want hysterics. They don't want earthquakes. They are the domestic economists, and they have to calculate the needs of their households pretty closely every week. This is why economic questions are more carefully studied now and why you get steadier, more sober, more wholesome opinion on all questions connected with the home."

Possibly no stronger conclusion can be deduced from the eleven years' experience of woman suffrage in Australia than the fact that its national parliament, by unanimous vote, adopted a resolution declaring its entire success and calling upon the parliament of Great Britain to enfranchise women.—New York Evening Post.

RASH ITCHED AND BURNED

400 South Hermitage Ave., Chicago, Ill.—"I was attacked with a breaking out on the inside of my arms. It was a small rash or pimples and it itched and burned, especially at night, so that before I knew it I had made myself sore. I had to wear the finest kind of cotton underwear, no woolen at all, because the least thing irritated it and made it much worse. The rash itched and smarted until at times I got no sleep at all.

"I had this trouble and took treatments for about one year, but they only gave me relief while taking them. Then I began using Cuticura Soap and Ointment and I got relief right away. In three months I was a well man again." (Signed) H. W. Foley, Nov. 5, 1912.

Cuticura Soap and Ointment sold throughout the world. Sample of each free, with 32-p. Skin Book. Address postcard "Cuticura, Dept. L, Boston."—Adv.

ROAD BUILDING

COST OF ROAD MAINTENANCE

Test in Southeastern Nebraska Shows Satisfactory Work Can Be Done for Less Than \$10 Per Mile.

(By C. F. CHASE, North Dakota Agricultural College.)

At the home farm in southeastern Nebraska there is a stretch of land one-half mile in length that we have dragged for seven years. Only once during this period has this road been worked with anything but a drag. Two years ago the side ditches were cleaned with the common road grader.

A careful record of the time taken to drag this road has been kept. Two trips for one man and one team requiring one hour's time for a single dragging is the basis taken. The first year we dragged it 15 times, the second 13, the third 17, and the fourth 12 and the fifth 14 times or 71 draggings of one hour's time in five years. This is 30 cents an hour for a man and team is \$4.26 a year for the one-half mile. For a mile it would be \$3.52 annually. Another road in the immediate vicinity cost less than \$10 per mile annually. A case is noted in Public Roads Bulletin No. 48, United States department of agriculture, where the cost of similar maintenance of roads in Arkansas was \$11 per mile. State Engineer Gearhart of Kansas puts the range of cost for dragging at from \$4 to \$10.

The cost for North Dakota should not cost more than \$10 a mile, while in most cases it would be much less, the cost depending upon the character of the soil, the rainfall, traffic and grade. As an average for all dirt roads I would place the annual cost of maintenance at \$7.50 per mile or \$460,740 to drag in a satisfactory manner the roads in North Dakota one year.

The total expenditure on public roads of North Dakota outside of towns in 1911 was \$691,540. If properly organized, and if the people were educated, we could properly maintain our earth road with the present road funds and have \$230,800 left for bridges, new construction, etc.

The national office of public roads recommends the patrol system combining dragging. The Nebraska legislature passed a law that is not unlike the patrol system. The substance of the law is as follows:

The graded roads in each county are to be divided into road dragging districts by the county boards. One person to each township is to be appointed superintendent of dragging, and is to receive not more than \$2.50 per day.

Roads shall be dragged whenever necessary, and all the sections of the highway shall be dragged at once. County boards may levy a tax of not to exceed one mill for road dragging. Where four horses are used on an eight-foot drag, the rate of payment is 75 cents for each mile of highway dragged both ways. Where a seven-foot drag and two or three horses are used, 60 cents is the prescribed rate.

On rocky highways or stretches of road that cannot be improved by dragging the county boards are not required to put the act into effect.

EXHIBITION OF ROAD MODELS

Greatest Display Ever Shown in Any Part of World Will Be Seen at San Francisco in 1915.

Arrangements are to be made by the United States department of agriculture, through Logan Waller Page, director of the office of public roads, to place on exhibition in 1915 the greatest collection of road models ever displayed in any part of the world. The models will furnish exact duplicates of the old Roman roads, French roads, and all of the various types of modern roads, together with miniature models of road machinery operated by electricity.

The office of public roads made an exhibit of road models for the first time at the Alaska-Yukon-Pacific exposition. The aim was to put on view such striking examples in miniature of road models that visitors would not only appreciate the beneficent effects of improved highways, but would at the same time be able to understand the methods of their construction.

Since the Alaska-Yukon-Pacific exposition closed, the exhibition has been displayed at various other expositions and fairs. Since that time the collection has been greatly augmented, until every single type of road is now represented and every known device used in the making of roads has been reproduced in miniature.

As a result of the instruction furnished by these road models, many farmers have joined forces to improve their own highways, and the road building movement has had a great impetus.

Must Be Paid for.
If we are to have good roads, we must be willing to pay for them and we must be willing to pay for their maintenance, and also remember that the maintenance is of as great if not greater importance than the original construction.

New Paris Pavement.
More durable and elastic than ordinary macadam is said to be a new pavement laid in Paris with a bottom layer of concrete, an intermediate one of concrete mortar reinforced with iron rods and a surfacing of crushed stone and mortar.

TIME TO GATHER APPLES TO SAVE THEM

A Fine Apple Orchard in Oradell, N. J., From Which a Big Yield Was Obtained. The Result of Pruning and Spraying.

(By L. M. BENNINGTON.)

Apples that are expected to go into storage should be picked just before they get mellow or fall from the trees.

They must not be picked too soon, however, but should be left until they have attained their full growth and color. No orchardist of any account now shakes apples from the tree, but picks them one by one and places them in a basket or bag suspended from the picker's shoulders.

The fruit should be carefully assorted and every apple that present a broken skin or a worm hole, or is in any other way imperfect, should be packed by itself; because diseased, bruised, or wormy fruit will very quickly destroy sound fruit that is placed next to it.

Apples should not be packed until four or five days after they have been picked. They should then be kept in a shed until freezing weather comes on. If apples are picked when dry,

and in season, they will stand a great deal of cold, but of course the frost should not be allowed to touch them.

The boxes or barrels in the shed should be placed so that the air can circulate freely between them. When the freezing weather comes on, the apples should be removed to the cellar, where they should be kept dry. A cellar containing water will soon destroy fruit. The best temperature at which apples keep, is about 33 degrees F.

Of course it is difficult to obtain this exact temperature, but two or three degrees above or below will do no harm.

If apples are placed loosely in bins in the cellar, they should be examined frequently during the winter and if they are not keeping well, the entire lot should be picked over very carefully and every apple showing signs of decay should be taken out, and the sound apples wiped with a cloth and placed in a clean bin.

DIVERS IMPORTANT HINTS FOR GARDEN

Heavy Application of Manure and Plenty of Potash Should Be Used on Vegetables.

(By L. M. BENNINGTON.)

Such vegetables as cabbage, cauliflower, lettuce and onions utilize to the best advantage heavy applications of manure.

Plenty of potash and phosphoric acid should be used with all vegetables and particularly with tomatoes, peppers, eggplants and root-crops.

Lime is the best preventative of club-foot in cabbage. It doesn't always prevent this disease, but it is usually effectual.

By having vegetables at the earliest possible date you will be able to catch the first customers and hold them during the whole of the season.

Soils that are heavily manured for cabbage, lettuce, celery and other crops will not need very much manure the following year, when planted with tomatoes, peppers and root-crops, especially if a fair amount of commercial fertilizer is used.

When green manure crops are plowed under, there is more or less tendency of such material to sour the land, and applications of lime after plowing under such crops, sweeten the soil and secure a more favorable condition for the growing of clover. It is very important to work in clovers as often as possible, and a sweet soil is necessary to get good results with them.

Crops must be gathered in proper condition, and sent to the market fresh and clean. Careful grading is essential. A few inferior specimens in a package are the first to attract attention. Even a few specimens will knock off more from the price of the package than they are worth.

Telephonic communications with all available markets and private customers is a necessity to the gardener, if he desires to keep posted and take orders for his produce.

RHUBARB IS VERY EASY TO HANDLE

Most Perfectly Rotted Manure Should Be Selected—Be Careful Not to Pull.

Select the best as well as the most perfectly rotted manure each season. Divide the roots, only allowing one tuber to a hill. The dirt should be heaped up rather loosely. Never paddle it compactly.

When the earliest leaves commence dropping over, this will call for cutting them off. This makes the others following straight and also taller.

In gathering be careful not to pull. Some do, but it is liable to injure small rootlets which help the plant's later growth. Cut the stalk an inch above the ground.

If in the fall the plants are covered with about three inches of clean straw the plant will respond abundantly until the hard frost kills it.—E. V. B.

Always Working.
Like the housewife, the poultryman's work is never done.

FRUIT LAXATIVE FOR SICK CHILD

"California Syrup of Figs" can't harm tender stomach, liver and bowels.

Every mother realizes, after giving her children "California Syrup of Figs" that this is their ideal laxative, because they love its pleasant taste and it thoroughly cleanses the tender little stomach, liver and bowels without griping.

When cross, irritable, feverish or breath is bad, stomach sour, look at the tongue, mother! If coated, give a teaspoonful of this harmless "fruit laxative," and in a few hours all the foul, constipated waste, sour bile and undigested food passes out of the bowels, and you have a well, playful child again. When its little system is full of cold, throat sore, has stomach-ache, diarrhoea, indigestion, colic—remember, a good "inside cleaning" should always be the first treatment given.

Millions of mothers keep "California Syrup of Figs" handy; they know a teaspoonful today saves a sick child tomorrow. Ask at the store for a 50-cent bottle of "California Syrup of Figs," which has directions for babies, children of all ages and grown-ups printed on the bottle. Adv.
