The potato crop about the neighborhood is very satisfactory this season, and the work of digging the tubers is well under way. It is expected the price will be unusually low owing to the big yield in the potato-growing sections of the state.

Numerous farmers show an inclination to plant winter wheat during the next several weeks, regardless of the lateness in the season. While a considerable acreage has already been sown, not a few of the farmers have been unable to get the required amount in the ground owing to a rush of other work. But it can be expected that the acreage of this valuable crop will be very large.

David Hunter stated yesterday that this week will practically witness the completion of the harvest of the higher grade apples at the Glenburnie fruit farm—approximately 15,000 bushels. The Permanent Hog House

No Other Building on the Farm Pays For Itself So Quickly

A Government expert says that "Good hog men average about seven pigs raised to the litter. Many do better. But the general average raised on the farm does not exceed four pigs to the litter."

This big difference is largely in the housing. The question is not so much a matter of cost as the proper design of a hog house. Many hog houses cost enough to be good, but are entirely unfit because the sun cannot shine into the pens. Sunshine and ventilation are absolutely necessary.

On the other hand, inexpensive houses often give better results than more costly ones—because of the better design. The design is what counts. Here's where we can help you.
