

SICK WOMAN HAD CRYING SPELLS

Restored to Health by Lydia E. Pinkham's Vegetable Compound.

Ensbau, Pa.—"I was all run down and weak inwardly. I had female troubles and nervous feelings and my head bothered me. I would often have crying spells and feel as if I was not safe. If I heard anyone coming I would run and lock the door so they would not see me. I tried several doctors and they did not help me so I said to my mother 'I guess I will have to die as there is no help for me.' She got me one of your little books and my husband said I should try one bottle. I stopped the doctor's medicine and took Lydia E. Pinkham's Vegetable Compound. It soon made a change in me and now I am strong and do all my work."—Mrs. AUGUSTUS BAUGHMAN, Box 86, Ensbau, Pa.

Why will women continue to suffer day in and day out and drag out a sickly, half-hearted existence, missing three-fourths of the joy of living, when they can find health in Lydia E. Pinkham's Vegetable Compound? If you would like free confidential advice address Lydia E. Pinkham Medicine Co., Lynn, Mass.

PREVENTS SIDE DRAFT

Illustration Shows How Evener Is Constructed.

Two Ordinary Doubletrees, Good, Tough Stick, Two Iron Pulleys for Strong Chain and Two Braces, Are Needed.
In response to numerous queries Wisconsin Agriculturist illustrates and describes a four-horse evener to prevent side draft as follows:
Two doubletrees of ordinary length, a good tough stick of which to make the long evener, two iron pulleys which will let a strong small link chain work through them, two bolts to go through the pulleys, and two strap-iron braces over the pulleys, will be needed.
The stick for the evener should be 5 feet 4 inches long, and the first pulley will be put on 7 inches from the right end of it, measuring to center of pulley. Measure 15 1/4 inches from the center of this pulley and bore hole for the plow clevis. Now measure 30 3/4 inches from the right end of this

Side Draft is Prevented.
evener and bore hole for the second pulley bolt so that the two pulleys are 24 inches apart.
It is best to bore two or three holes at the left end of the long evener. Put the first one 3 inches from the end and the others 2 and 4 inches farther in. This evener works one horse in the furrow and three on the unturned land with no side draft, say those who have used it.

LIME REQUIRED BY ALFALFA
On Soils Which Are at All Acid It is Absolutely Essential for Successful Stand.
Alfalfa is one of the great lime lovers. Reports made to the Iowa experiment station indicate that in an average of over a thousand fields, those which received no lime yielded 8.4 tons to the acre, while those which received lime before seeding yielded at the rate of four tons to the acre, and those which received lime after seeding, at the rate of 3.3 tons to the acre. Lime generally pays for itself, even on soils which are fairly rich in lime, and on soils which are at all acid it is absolutely essential to successful alfalfa growing to spread lime at the rate of one to two tons to the acre. The easy way to spread it is with a lime spreader. With the increasing use of lime, there should soon be a lime spreader in every community in the corn belt.

TELL ALFALFA FROM CLOVER
Formation of Leaf Enables One to Distinguish Plants While Young—Longer When Old.
(From the United States Department of Agriculture.)
The leaf of alfalfa is divided into three leaflets, the middle one of which has a short stem, differing in this respect from red and alsike clovers, in which the center leaflet is attached directly at the base.
This difference in the two plants readily enables one to distinguish alfalfa from red clover when the plants are very young.
As the plants become older the leaflets of the alfalfa become more elongated than in the clovers.

METHODS OF DOCKING LAMBS
Burning With an Iron Is Favored by Kansas Expert—Wound Is Seared and Doesn't Bleed.
When docking lambs the four feet of the animal should be held together tightly against the body of the operator, points out A. M. Paterson, instructor in animal husbandry in the Kansas State Agricultural college.
There are two methods of docking. One is by cutting off with a sharp knife and the other is by burning with the hot iron sears over the wound and prevents bleeding. If the lambs are old it is well to tie a string around the stump to prevent bleeding.

COMFORTS FOR WORK HORSES
Proves Small Pasture Which They Can Be Turned Into After Day's Work—Does Them Good.
One of the best things you can do is to provide a small pasture for your work horses. It should be near the barn so the horses can be easily turned into it each night after they come from the field. A bite of green grass, a roll and an hour or two out in the open will do them a world of good. On hot nights leave them out all night. The work the following day can be much more easily done if such comforts are provided.

BURSTING HEAD OF CABBAGE

Trouble Caused by Rapid Growth and May Be Prevented by Breaking Off Some of Roots.

Many persons growing their own vegetables have experienced considerable annoyance in having a large number of fine heads of cabbage to burst, before the vegetable can be used or marketed.
The bursting is caused by rapid growth, and usually occurs after a warm rain—which has followed a dry spell. It is surprising how rapidly the heads will split and push out from the center, which is damaging unless the cabbage is used at once.
To prevent cabbage from bursting, go to each head, and pull it just enough to break a large number of the small rootlets, but not enough to allow the head to fall or lean very much to one side. This will lessen the amount of moisture and food taken into the plant and the development of the head, and consequently the bursting will cease. In most cases the cabbage will remain perfect and unharmed, and can be sold or used before any damage results.
Heads of cabbage about to burst, or even those showing the first split, can be kept for several weeks, without damage by simply following the above instructions carefully.

PREVENT SCOURS IN CALVES
Cause of Great Loss to Dairymen is Due Almost Entirely to Over-feeding or Dirty Pails.
The most fatal disease in calves is the scours. This simple trouble is the cause of our great loss among the calves during the first four or five months. It is owing almost invariably to one of two things: either overfeeding, or feeding from dirty pails. The first thing to do when this appears is to cut down the feed and cleanse the pails thoroughly.
Scours are sometimes caused by feeding sour milk and then sweet milk. A good calf can be raised on sour milk if he is fed sour milk all of the time after he is a month old and the milk is in the same degree of sourness when fed, but no one can raise a good calf on sour milk one feed and sweet milk the next.
And no person can raise a bunch of good calves who feeds from dirty pails.

CORNER POST ON A HILLSIDE
Simple, Cheap and Satisfactory Method is Described and Shown in Illustration Herewith.
To anchor a corner post on a hillside, set the corner post 4 feet deep. The second post should be not less than 2 feet deep and tall enough so the top will be level with the ground at the

GUINEA FOWL IS PROFITABLE
Large Farms Now Being Established Where Guinea Are Being Raised for Meat Purposes.
Raising guinea fowls in Kansas is profitable, according to N. L. Harris, superintendent of the Kansas State Agricultural college poultry farm.
"Large farms are now being established where guineas are raised for meat purposes," said Mr. Harris. "The eggs are small and consequently are of little value commercially."
"Guinea fowls are easy to raise. They are noisy and good fighters and are not subject to the attacks of hawks."
"There is a good market for guinea fowls. The meat of the young guinea resembles that of prairie chickens and wild ducks. The clubs and stylish fates use the guinea as a substitute for ducks, prairie chickens, quail, and other game which the laws make it impossible for them to secure."

IMPORTANT EGGS BE TURNED
Comparatively Small Hens Have Trouble in Turning Goose Eggs—Crippled Goslings Result.
Sometimes it is necessary to set goose eggs under comparatively small hens, that have not the strength to turn the large eggs. In setting eggs under a hen, mark them on one side, so that you can tell whether or not the hen is turning them.
If she does not turn the eggs, the goslings will be crippled, unless the eggs are turned by hand.

DETERMINE ABILITY OF COW
Milk Scale and Babcock Test, Assisted by Judgment of Eye, Are Most Practical Means.
The cow is very much like a race-horse when it comes to judging her ability to perform. Both the race-horse and the cow must be judged by means of the eye assisted by the record of performance.
The milk scale and the Babcock test, assisted by judgment of the eye, are the best means of exercising judgment in building up a profitable dairy herd.

FARM POULTRY

PROPORTION OF MALE FOWLS
One Rooster to Fifteen Hens is About Right With Larger Breeds, Such as Plymouth Rock.
Birds of the general-purpose class, such as the Plymouth Rocks, Wyandottes, Rhode Island Reds, Oringtons, etc., usually require one male to 15 females, depending upon the vigor of the male. Among birds of lighter

breeds, such as Leghorns, Anconas, Campines, Hamburgs, etc., one male is sufficient for a flock of 20 females.
About ten days should be allowed for the fertilization of the flock by the male. However, in small flocks, such as four or five females, only four or five days is needed.

GOOD MEDICINE FOR FOWLS
On Account of High Price of Permanganate of Potash Substitute is Sought by Poultry Men.
(Storrs Experiment Station.)
Many poultry men have been using permanganate of potash to prevent the spread of colds and other catarrhal diseases. During the past two years this product has risen in price from 50 cents to \$2.50 to \$3 per pound; thus it is not surprising that a good substitute is being looked for.
One authority suggests the use of bluestone or copper sulphate, which can be used as follows: Dissolve four ounces of the bluestone in a quart of water, this to be known as a stock solution. Add one ounce of this solution to each gallon of the drinking water. This can perhaps be well used for a short period, but should not be too long continued.
Furthermore, one ought to use enameled or earthenware vessels, as the copper sulphate solution may produce undesirable chemical changes when used in galvanized pans.

EGGS \$1 A DOZEN NEXT WINTER
Statistics for 30 years show December eggs worth 2 1/2 to 3 times that of previous April and May. You will not need to boycott eggs next winter if you will coat some fresh eggs soon with Egg-o-Latum and put them in an egg-crate or carton in the cellar. A 50-cent jar treats 50 dozen eggs.
Another good way is to get some hens. We can tell you how to keep them healthy and laying every month of the year. The Egg Poultry Library (5 booklets) mailed free for 5 cents stamps. Geo. H. Lee Co., 10 Lee Bldg., Omaha, Neb. For 21 years makers of Lee's Poultry Foods, Remedies, Insecticides and supplies.—Adv.

Fish Are Misnamed.
Apparently every popular name for fish is a misnomer. There is a fish plentiful on the coasts of Alaska known as the atka mackerel. The bureau of fisheries patiently points out that it is not a mackerel and nothing like a mackerel. But it is an excellent food fish, and can be shipped salted. Alaska canneries have been encouraged to salt this fish, which will be known as the atkafish, and it should make its appearance in our markets in the coming winter.

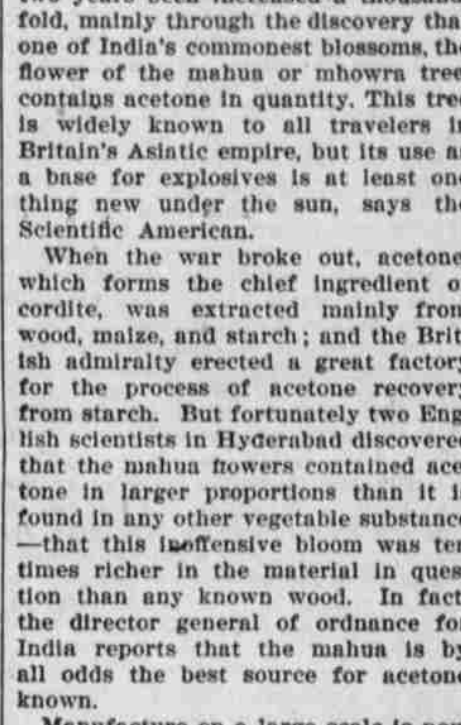

SHAKE INTO YOUR SHOES
Allen's Foot-Kase, the antiseptic powder to be shaken into the shoes and sprinkled in the foot-bed. It relieves painful, swollen, smarting feet and takes the sting out of corns and bunions. Used by the British and French troops at the front. Allen's Foot-Kase is a certain relief for tired, aching feet. Sold everywhere.—Adv.
Still Very Much Alive.
"She has a past."
"Oh! Why doesn't she bury it?"
"It isn't dead yet."—Judge.
He who would save should begin with the mouth.

The Effects of Opiates.
THAT INFANTS are peculiarly susceptible to opium and its various preparations, all of which are narcotic, is well known. Even in the smallest doses, if continued, these opiates cause changes in the functions and growth of the cells which are likely to become permanent, causing imbecility, mental perversion, a craving for alcohol or narcotics in later life. Nervous diseases, such as intractable nervous dyspepsia and lack of staying powers are a result of dosing with opiates or narcotics to keep children quiet in their infancy. The rule among physicians is that children should never receive opiates in the smallest doses for more than a day at a time, and only then if unavoidable.
The administration of Anodynes, Drops, Cordials, Soothing Syrups and other narcotics to children by any but a physician cannot be too strongly decried, and the druggist should not be a party to it. Children who are ill need the attention of a physician, and it is nothing less than a crime to dose them willfully with narcotics.
Castoria contains no narcotics if it bears the signature of Chas. H. Fletcher. Genuine Castoria always bears the signature of Chas. H. Fletcher.

GET EXPLOSIVE FROM FLOWER
British Scientists Discover That Blossom of Mahua Tree in India is Rich in Acetone.
The munition output of India has in two years been increased a thousand-fold, mainly through the discovery that one of India's commonest blossoms, the flower of the mahua or mowra tree, contains acetone in quantity. This tree is widely known to all travelers in Britain's Asiatic empire, but its use as a base for explosives is at least one thing new under the sun, says the Scientific American.
When the war broke out, acetone, which forms the chief ingredient of cordite, was extracted mainly from wood, maize, and starch; and the British admiralty erected a great factory for the process of acetone recovery from starch. But fortunately two English scientists in Hyderabad contained acetone in larger proportions than it is found in any other vegetable substance—that this inoffensive bloom was ten times richer in the material in question than any known wood. In fact, the director general of ordnance for India reports that the mahua is by all odds the best source for acetone known.
Manufacture on a large scale is now under way and it is whispered that the abundance of munitions with which the British forces in Mesopotamia appear to be blessed is to be attributed to the new discovery.

PAIN? NOT A BIT! LIFT YOUR CORNS OR CALLUSES OFF
No humbug! Apply few drops then just lift them away with fingers.
This new drug is an ether compound discovered by a Cincinnati chemist. It is called freezone, and can now be obtained in tiny bottles as here shown at very little cost from any drug store. Just ask for freezone. Apply a drop or two directly upon a tender corn or callus and instantly the soreness disappears. Shortly you will find the corn or callus so loose that you can lift it off, root and all, with the fingers.
Not a twinge of pain, soreness or irritation; not even the slightest smarting, either when applying freezone or afterwards.
This drug doesn't eat up the corn or callus, but shrivels them so they loosen and come right out. It is no humbug! It works like a charm. For a few cents you can get rid of every hard corn, soft corn or corn between the toes, as well as painful calluses on bottom of your feet. It never disappoints and never burns, bites or inflames. If your druggist hasn't any freezone yet, tell him to get a little bottle for you from his wholesale house.—adv.
In a Sense.
"I ache all over from working in my garden yesterday."
"Growing pains, eh?"
A man is never such a bonehead that he can fool himself by lying to himself.

When Your Eyes Need Care Try Murine Eye Remedy
No Smarting—Just Eye Comfort. 60 cents at Druggists or mail. Write for Free Eye Book. MURINE EYE REMEDY CO., CHICAGO

SWAMP-ROOT
Is not recommended for everything, but if you have kidney, liver or bladder trouble it may be found just the medicine you need. At druggists in fifty-cent and dollar sizes. You may receive a sample size bottle of this reliable medicine by Parcel Post, also pamphlet telling about it.
Address Dr. Kilmer & Co., Binghamton, N. Y., and enclose ten cents, also mention this paper.
