**SAVE MUCH TIME**  
 Modern Methods and Implements Mean More Work Accomplished at Less Cost.

**LABOR SAVED IN HAYMAKING**  
 Scarcity of Man Power Necessitates General Use of Certain Types of Labor-Saving Machinery—Horse Solves Problem.

(Prepared by the United States Department of Agriculture.)  
 Thousands of young men have been called to the colors, and on many farms this results in a scarcity of labor. The problem of the hay grower is how to handle his crop with a smaller crew than hitherto, and one often mostly of middle-aged men and boys. With methods used heretofore this type of labor certainly cannot harvest the hay in the usual time, at least on many farms in the East and South, where it has been the custom to use a comparatively large amount of hand labor in making hay.  
 Solution of Problem.  
 Although there is a scarcity of man labor, there are still plenty of horses on most farms, and herein lies the so-

This Method Saves Much Hard Work in Hay Making.

lution of the problem. On farms where considerable hay is grown methods must be adopted by which the greater part of the heavy labor is done by horses. This will necessitate the general use of certain types of labor-saving machinery, some of them not so common in the East, which have been thoroughly tested and proved satisfactory in the western part of the United States. The small hay grower, however, need not make a very heavy investment in new haying apparatus, for by re-arranging the work of his crew and using a little more horse labor for the hard work, he can add considerably to the efficiency of his crew.

The time of day when the mower is started has a direct bearing on the amount of hay made per day and the number of men required. This is especially true on farms where it is the custom to haul or stack hay in the afternoon only. If mowing is done in the morning and raking in the afternoon, more men and horses than usual will be required, and if mowing and raking are both done in the afternoon, still more men and horses will be needed.

**Use Larger Mowers.**  
 The 5-foot cut is the most common size used in the East. With the present scarcity of labor, it will be economy to use larger mowers; 6, 7, and even 8-foot sizes can be used on a great many farms. Some idea of the time saved by using these larger sizes may be had when the difference in the amount of work done by each is known. Under average conditions, a 5-foot mower will cut ten acres in ten hours, a 6-foot mower will cut 12 acres, a 7-foot 14 acres, and an 8-foot about 16 acres in ten hours. It should be borne in mind that more power is required for the wider cuts. Many alfalfa growers are using the 8-foot cut with good success, and make a practice of mowing early in the morning before the dew is off, or even during a light rain. It does not pay to wait until the dew is off, before starting the mower, if the tedder is used to "klick" the water out of the hay. The size of mower used and the time of day it is started are the most important factors in crew arrangement. The use of the tedder and rake are next in importance, and these three implements should be kept clearly in mind when attempting to solve the problem of how to make a small crew efficient.

**Good Feed for Chicks.**  
 A Johnnycake makes good feed for chicks when crumbled up fine. After the first week you can begin feeding small grains such as millet, pinhead oatmeal, rolled oats, cracked wheat and cracked corn.

**Thin Cream With Water.**  
 If the cream is too thick it should be thinned out before the churn starts, but in all cases the thinning should be done with water.

**WHAT COW-TESTING ASSOCIATION CANNOT DO**

(Prepared by the United States Department of Agriculture.)  
 It cannot compel a dairyman to dispose of his poor cows if he is determined to keep them. It cannot make him feed according to production nor practice economy in the management of his dairy herd. It cannot require him to dispose of his scrub bull and buy a better one. It has never yet demanded the planting of legumes and the building of silos. It never will compel, but it always will encourage, economical improvement of the herd, of the farm and of the business.

**INOCULATION PLANS FOR SOY BEAN CROP**

Why It Is Sometimes Advisable and How It Increases Yield.

One Way is to Transfer Soil to New Field From Field Where Beans Have Been Successfully Grown—Other Methods.

(Prepared by the United States Department of Agriculture.)  
 In most of the cotton belt nodule-forming bacteria for soy beans, which make the free nitrogen of the air available, are already in the soil, but usually in limited quantities, and for the sake of safety inoculation frequently is advisable. This inoculation can be made in several ways. One is by transferring soil to the new field from a field where soy beans have been successfully grown and nodules have formed on the roots of the plants. Care should be taken to keep the inoculating soil out of the sunlight from the time it is taken out of the old field until it is worked into the new. A cloudy day or a time early in the morning or late in the evening should be chosen for making the transfer. Two hundred pounds or more of soil should be used per acre and should be harrowed into the soil immediately after scattering. Another method is to inoculate the seed with artificial cultures. In some states these cultures can be obtained from state agencies at a nominal cost. Directions for using the cultures accompany each package. Still another way is to moisten the seed with a thin solution of molasses and water and then thoroughly mix fine dry dirt from an old soy bean field with the seed. After the seed is dry it can be planted in the usual way.

Nitrogen-bearing fertilizers have the same effect on the growth of the soy bean as do the nodule-forming bacteria, and often when planting them for the first time farmers fertilize

Emptying a Soy Bean Picker and Screening the Beans.

with 200 pounds of cottonseed meal per acre to insure a crop while the nodule-forming bacteria are developing in the soil.  
 Some nodule-forming bacteria are usually carried with seed that is not artificially inoculated, owing to the fact that in the process of harvesting and thrashing the seed becomes more or less coated with soil dust, and farmers say that where soy beans are planted without either inoculating or fertilizing with cottonseed meal the yields increase from year to year, until three crops of beans have been grown on the land. This is evidently due both to the improvement in the inoculation and to the increase in fertility of the soil, but largely to the inoculation. The bacteria carried with the seed or the limited number already in the soil multiply from year to year until the supply is sufficient.

**MAKE MISTAKES IN POULTRY**  
 Also Many Difficult Problems Will Be Presented to Beginner Before Success Is Attained.

(Prepared by the United States Department of Agriculture.)  
 Beginners in the poultry business will probably make many mistakes and difficult problems will be presented for solution before success in any large measure will be attained. As soon as it is found to be a paying investment, more capital may be put into the plant.

**Patience in Raising Calfs.**  
 Patience and gentleness are needed in raising calves.

**DAIRY FACTS**

**BUTTER PRODUCED ON FARMS**

First Thing Necessary is to Begin With Good, Clean-Flavored Milk—How to Separate.

(Prepared by the United States Department of Agriculture.)  
 Although creamery butter has almost entirely displaced farm-made butter in the markets of the United States, more than half the butter produced is still made on farms. The fact that this butter cannot compete successfully with the creamery product is that most of it brings a poor price and is consumed in villages or small towns, or is shipped to renovating factories for treatment and sells as a relatively low-grade product. It is possible, however, greatly to improve the quality of farm butter by employing in its production standard practices and greater care than is ordinarily expended.  
 To produce good butter it is necessary to begin with a good, clean-flavored milk. In some sections of the country it is customary to ripen and churn the whole milk instead of the cream. That practice, however, is in-

Comparison of Pound Print and Country Roll—Superiority of Former is Obvious.

advisable, because it requires a high churning temperature, which injures the quality of the butter and causes a considerable loss of butterfat in the buttermilk. It is also liable to result in too much water in the butter. For those reasons only the churning of cream will be considered. It is just as essential to obtain cream under such conditions that it will be of equally good quality as the milk.

Cream may be separated from the milk by gravity or by a centrifugal separator. Gravity separation may be accomplished by the shallow-pan, the deep-setting, or the water-dilution method. The first two have been extensively used and are still in use where very few cows are milked. In the first method the milk is placed in shallow pans and set in a cool place for about 36 hours, usually in a cellar or a spring house, and sometimes in cold water, to permit the cream to rise. During that time the surface, as a rule, is exposed to the air and frequently the cream absorbs or develops objectionable flavors. The skim milk resulting from the removal of the cream by this method usually contains 0.5 to 1.5 per cent of butterfat; that is, one-eighth to one-third of all the butterfat in the whole milk. It is frequently sour also; its value for calf feeding is injured, and its use in the household limited.

By the deep-setting method the milk is soon as drawn from the cow is placed in a "shotgun" can, which is placed in cold water, preferably ice water, for 12 hours. Because of the quick cooling to a low temperature the cream rises more quickly and completely than in the shallow-pan method and is skimmed before its fresh sweet flavor has been lost. The resulting skim milk may contain as low as 0.2 per cent of butterfat, though often nearer 0.5 per cent, and is sweet. If the milk is not placed in ice water immediately after it has been drawn the loss of butterfat is still greater.

The dilution of milk with water has been used to some extent, in the belief that it aids creaming, but investigations have shown that the loss of butterfat is as great as, or greater than, in the shallow-pan method. There is the further objection that a watery flavor is imparted to the cream, and the usefulness of the skim milk is limited; mixtures of water and skim milk being undesirable either for household use or for calf feeding.

A centrifugal separator gives by far the best results, because the separation is accomplished in a few minutes while the milk is still warm. The skim milk usually contains only a trace of butterfat and is available for use at once, while perfectly fresh. Because of the ability of the mechanical separator to skim clean, it is a profitable investment unless the quantity of milk is very small.

A cream separator should be run according to the directions furnished by the manufacturer. Bearings and gears should be kept clean.

**Libby's**  
**Tempting veal loaf**

**WHAT** is more tempting for a summer luncheon than Libby's savory Veal Loaf! Pretty garnished it makes a dainty yet substantial dish—and one all ready to put on the table!

**Help Save the Harvest**

When Our Own Harvest Requirements Are Completed United States Help Badly Needed Harvest Hands Wanted

Military demands from a limited population have made such a scarcity of farm help in Canada that the appeal of the Canadian Government to the United States Government for

**Help to Harvest the Canadian Grain Crop of 1918**  
 Meets with a request for all available assistance to GO FORWARD AS SOON AS OUR OWN CROP IS SECURED

The Allied Armies must be fed and therefore it is necessary to save every bit of the crop of the Continent—American and Canadian.

Those who respond to this appeal will get a Warm Welcome, Good Wages, Good Board and Find Comfortable Homes

A card entitling the holder to a rate of one cent per mile from Canadian boundary points to destination and return will be given to all harvest applicants.

Every facility will be afforded for admission into Canada and return to the United States.

Information as to wages, railway rates and routes may be had from the UNITED STATES EMPLOYMENT SERVICE OMAHA, HASTINGS, NORTH PLATTE, COUNCIL BLUFFS, IA.

**EACH HAD AWFUL THOUGHT**

For a Few Dreadful Moments Fair Dancing Partner of Jackies Feared Worst Had Happened.

This is a true story. It occurred at a dance given for certain boys in the naval reserve.

While dancing with one of the jackies, a certain young lady had a horrible sensation that her petticoat was coming down. She excused herself, went to the dressing room, and secured the garment with an extra safety pin—though it showed no signs of being loose from its moorings.

Then she danced with another sailor—and had the same disconcerting sensation. She fled to the dressing room again. This time, several other girls were there—each with the same end in view. It took some time to solve the mystery. You see, the sensation had been caused by the bottoms of the boys' bell-bottomed trousers rubbing against the ankles of the fair dancers.

Watch Your Skin Improve. On rising and retiring gently smear the face with Cuticura Ointment. Wash off Ointment in five minutes with Cuticura Soap and hot water. For free sample address "Cuticura, Dept. X, Boston." At druggists and by mail. Soap 25¢, Ointment 25¢ and 50¢.—Adv.

**Safety First.**  
 "You make it a rule never to smoke when filling your car with gasoline."  
 "Yes," declared Mr. Chuggins.  
 "When I buy gasoline I can't afford to smoke."

**He is Content.**  
 "Although all my goods are a drug in the market," said he, "I am content, I keep an apothecary shop."

**Lives 200 Years!**

For more than 200 years, Haarlem Oil, the famous national remedy of Holland, has been recognized as an infallible relief from all forms of kidney and bladder disorders. Its very age is proof that it must have unusual merit.

If you are troubled with pains or aches in the back, feel tired in the morning, headaches, indigestion, insomnia, painful or too frequent passage of urine, irritation or stone in the bladder, you will almost certainly find relief in GOLD MEDAL Haarlem Oil Capsules. This is the good old remedy that has stood the test for hundreds of years, prepared in the proper quantity and convenient form to take. It is imported direct from Holland laboratories, and you can get it at any drug store. It is a standard, old-time home remedy and needs no introduction. Each capsule contains one dose of five drops and is pleasant and easy to take. They will quickly relieve those stiffened joints, that backache, rheumatism, lumbago, sciatica, gall stones, gravel, "brick dust," etc. Your money promptly refunded if they do not relieve you. But be sure to get the genuine GOLD MEDAL brand. In boxes, three sizes.—Adv.

**Do This After You Eat**  
 Hot Weather "Out of Fix" Stomachs Easily Put Right

When hot weather comes, stomach and bowel miseries begin. Strong, sound stomachs as well as weak ones are easily affected by the harmful gases and acids so often produced in the things we eat and drink during hot weather. Winter—Nature's ice-box, is gone—but weather breeds the poisonous germs that cause ptomaine poison in all its many forms.

Every one knows that the after-eating nausea, belching, that wretched, bloated, "lumpy" feeling, sour stomach, heartburn, food repeating, and other forms of indigestion and dyspepsia are far more frequent during hot weather. It is the time when you have to guard constantly against an upset stomach and the many ills that are always apt to follow. Then again—we have the world's war to win—with the change of diet and extra work which means we must all carefully guard our stomachs this year—keep ourselves fit and fine.

A marvelous relief and prevention has been found for stomach sufferers, which makes it possible for you to eat the things you like best without a

single unpleasant thought of what may follow. EATONIC Tablets, good tasting, quick acting, and absolutely harmless, have already proven an untold blessing to thousands of people.

One or two EATONIC Tablets after meals work wonders. They sweeten and purify the stomach by neutralizing the trouble-making acids and gases and stop the gripping pains of indigestion and other stomach and bowel disturbances.

And the best part of it is—you can be your own judge. Just try EATONIC. Let your own stomach tell you the truth. If you are not pleased then they don't cost you one penny.

Druggists are amazed at the astonishing reports from EATONIC users, who have found EATONIC a quick, wonderful relief for stomach ailments. So we tell you to get a large box of EATONIC from your druggist, whom you know and can trust, and then if EATONIC is not suited to your case, return it to your druggist at once and get back your money. That's a fair, square offer. Every person is urged to make the test. Let your own stomach tell you the truth. So start using EATONIC today.
