PRODIGES PROVE A PUZZLE
Psychological Experts Unable to Account for Their Amazing Prevalence in England.
Infant prodigies are being discovered in England almost daily. Some connect this with the psychology of war. One of the youthful marvels is Pamela Bianco, a thirteen-year-old girl artist, whose drawings were given the place of honor in an exhibition at one of the principal London galleries.
Critics dealt with them quite seriously and said that the work was suggestive of Botticelli and some of the other old masters. Pamela is an Italian girl who was born in England and never had taken any drawing lessons.
Ronnie Routledge, four, little more than a baby, whose parents know nothing of music, has enjoyed six months of tuition on the violin. At the Grimsby College of Violinists recently he outranked 43 competitors, most of them in the twenties, and scored 110 points in a possible 120. Professor Danton describes him as a miracle.
Little Robbie Day, aged seven, of Brighton, son of a motor mechanic, has wonderful powers of clairvoyance, according to the Weekly Dispatch. Blindfolded, he described a number of articles. These included a treasury note (giving its color, numbers and writing on the back), the color and texture of a piece of fabric he had never seen, the correct answer to a complicated sum in mental arithmetic and figures written down at random.
After five minutes' test he complained of feeling icy cold. "I just see little pictures and I just say them," is Bobbie's explanation.
AMERICANS WILL BE THERE
Opportunities Offered in Abyssinia Are by No Means Likely to Be Long Overlooked.
After his visit to the United States one of the Abyssinian visitors admitted that he knew now why there were no Americans in Abyssinia. As he had seen him at home, the American, so the stranger from Abyssinia decided, is not given to slow and tedious traveling. He wants to get about quickly, and Abyssinia, with nothing faster than a pack mule, offers no inducements of rapid transportation. "That, it seems," said the Abyssinian, "has kept the American man out of our country. It is too bad. We need bridges like yours, we need streets like yours, and we need men like yours to direct the building of them." Commercially and industrially, however, the truth probably is that Abyssinia has not been "discovered," and when that happens the American man will come and build his own rapid transportation. The mere statement that the capital, Addis Ababa, is a city of some 40,000 inhabitants and no railway connection with the outside world is a temptation.—Christian Science Monitor.
Birds Have Right of Way.
Fowl have the right of way in air, warns the director of military aeronautics. This is justice indeed, since birds flew first.
But this is not all. Recently many towns along the Atlantic coast have been visited with dead bird showers. Aviators flying by a town would see a flock of wild fowl coming their way. They would set their machine guns and let the bullets fly.
Presently a prominent citizen walking below would be hit with a large, bloody bird. He complained to the town, and the town complained to the department of agriculture. Then the federal migratory bird law between the United States and Great Britain was referred to, and it was found that shooting birds from airplanes is unlawful.
The Wrong Man.
When I was an eighteen-year-old girl I was keeping house in my mother's absence and received word from an old friend of the family, of whom I was very fond, that he was to be our guest for a day or two. Toward evening when the doorbell rang I told our little colored maid to answer it and show Mr. Blank into the living room.
I rushed into the room which was half dark, some minutes later and threw my arms around the gentleman who rose to greet me and kissed him soundly only to hear a strange voice say, "I called to see if I could interest you in a wonderful set of books I am showing today."
I backed to the light and turned it on to view a perfect stranger—a book agent. But Mr. Blank's timely arrival just then saved a little of my embarrassing explanation.—Chicago Tribune.
Triple Tone Electric Bell.
Three separate and distinct sounds are given by an electric bell which operates on ordinary lighting current by means of a transformer. In the home the bell can be connected with push buttons installed at three different doors—front, kitchen and side, for example. When one button is pressed a clear ring results, when the second is operated a buzz is produced, and when the third button is pushed a combination buzz and ring results. In the office or shop this bell will prove most useful, since it can be used to call three different persons without necessitating them to count the number of rings, as must often be done when the customary signaling is employed. This bell has no contact points to burn out and no batteries to replace.
