Sometimes there are serious conditions where a hospital operation is the only alternative, but on the other hand so many women have been cured by this famous root and herb remedy, Lydia E. Pinkham's Vegetable Compound, after doctors have said that an operation was necessary — every woman who wants to avoid an operation should give it a fair trial before submitting to such a trying ordeal.

If complications exist, write to Lydia E. Pinkham Medicine Co., Lynn, Mass., for advice. The result of many years experience is at your service.

We meet and mingle; we mark men's speech;

You men and women who can't get feeling right-who have headache, coated tongue, bad taste and foul breath, dizziness, can't sleep, are billous, nervous and upset, bothered with a sick, gassy, disordered stomach and colds.

Are you keeping your liver and bowels clean with Cascarets, or shocking your insides every few days with Calomel, Salts, Oil and violent pills? Cascarets work while you sleep; they cleanse the stomach, remove the sour, undigested, fermenting food and foul gases; take the excess bile from the liver and carry out of the system all the constipated waste matter and polson in the bowels. Cascarets never gripe, sicken or cause inconvenience and Cascarets cost so little too .-- Adv.

Airship Construction Complex. Some interesting facts regarding

the work required in building a large modern airship is given in a recent issue of the Engineer, which states that the general problems of design are closely allied to those of naval architecture; although the airship designer must be a highly skilled mechanical engineer and also must have a knowledge of textile technology. For the work of construction, owing to the multiplicity of parts required, a very efficient shop organization is necessary. In a rigid airship structure, excluding the machinery, there are 20,000 different parts, a total length of structural material of 20 miles of wire, and more than 2,000,000

Japanese Have New Religion Japan has devised a new doctrine of life, says the secretary of the British Foreign Bible society. Eighteen volumes are taken to explain in detail its principles. Tokyo is the headquarters, where daily lectures are

ment of Agriculture.) Since early in 1919 there has been

a steady increase each month in the federal ald business in the bureau of public roads of the United States department of agriculture. States in all sections of the country are filing their projects and receiving allotments. The road-building era is in full swing, and it would seem that the end is not yet. All indications point to greater records in the months immediately to come.

Based on complete reports from 44 of the states cash expenditures on the rural roads and bridges of the United States for the calendar year 1918 amounted to \$286,098,193. To this should be added the value of statute and convict labor, which cannot be fixed with any great degree of accuracy but probably amounted to not less than \$14,000,000, thus making the grand total expenditures for the year \$300,000,000. This total is made up of the actual expenditures for such items as labor, materials, supervision and administration directly connected with the construction, improvement and upkeep of public roads and bridges outside the limits of incorporated towns and cities, and does not include any item for sinking-fund payments or redemption and interest on road and bridge bonds.

The year 1918 offered an unprecedented condition in practically all lines of highway work. There was not only a tremendous increase and expansion in the amount of heavy truck traffic on public roads and an unprecedented shortage in regard to road materials, labor and ready funds, but also a decided increase in maintenance work, which was, however, partially offset by a decrease in the amount of new construction.

PLANS FOR GOOD ROAD DRAG

One Shown in Illustration is Adapted for Localities Where Lumber is Plentiful.

(Prepared by the United States Depart-ment of Agriculture.)

The design for a road drag shown in the illustration is adapted for localities in which sawed lumber may be readily obtained. In this design the runners are made of 2 or 21/2-inch boards, 10 inches wide and from 6 to 8 feet long, re-enforced with other 2inch boards of the same length, but only 6 inches in width. If more convenient, however, 4-inch runners with-

in connection with the split-log type of drag. In this case only two of the cross braces have their enus fitted into auger holes like rungs.

In fastening the draw-chain to a sawed-lumber drag, it is usually advisable to run both ends of the chain through holes in the front runner or else make the connections by means of eye or hook bolts, as shown. The reason for this is that the sawed cross braces are seldom sufficiently strong to withstand the pull of the chain when it is looped over them, as is frequently done when round timber crosspleces are used. If straight-grained pieces are used for the crosspieces, however, there is no apparent reason why one end of the chain might not be connected by looping it around the 21/2inch square crosspiece near the cutting end.
