**BILIOUSNESS**  
Caused by  
**Acid-Stomach**

If people who are bilious are treated according to local symptoms they seldom get very much better. Whatever relief is obtained is usually temporary. True biliousness is usually temporary. Trace biliousness to its source and remove the cause and the chances are that the patient will remain strong and healthy.

Doctors say that more than 70 non-organic diseases can be traced to an Acid-Stomach. Biliousness is one of them. Indigestion, heartburn, belching, sour stomach, flat and gas are other signs of acid-stomach. **EATONIC**, the marvelous modern stomach remedy, brings quick relief from these stomach miseries which lead to a long train of ailments that make life miserable if not corrected.

**EATONIC** literally absorbs and carries away the excess acid. Makes the stomach strong, cool and comfortable. Helps digestion, improves the appetite and you then get full strength from your food. Thousands say that **EATONIC** is the most effective stomach remedy in the world. It is the help you need. Try it on our money-back, not-satisfied guarantee. At all drug stores. Only 50 cents for a big box.

Opinions Differ.  
Nagging Wife—"What I need is a new silk dress." Tired Husband—"What you need is muslin."—Judge.

**LONG FACES**  
"Cascarets" for Liver  
and Bowels bring  
back Smiles

Turn the "kill-joys" out—the headache, biliousness, indigestion, the sick, sour stomach and misery-making gases—turn them out tonight and keep them out with Cascarets.

Millions of men and women take a Cascaret now and then and never know the misery caused by a lazy liver, clogged bowels, or an upset stomach.

Don't put in another day of distress. Let Cascarets cleanse your stomach; remove the sour, fermenting food; take the excess bile from your liver and carry out all the constipated waste matter and poison in the bowels. Then you will feel great.

A Cascaret tonight straightens you out by morning. They work while you sleep.—Adv.

Occasionally when a man attempts to stand on his dignity some one spoils it by sitting on it.

**"Cold in the Head"**  
is an acute attack of Nasal Catarrh. Persons who are subject to frequent "colds in the head" will find that the use of **HALL'S CATARRH MEDICINE** will build up the System, cleanse the Blood and render them less liable to colds. Repeated attacks of acute Catarrh may lead to Chronic Catarrh.

**HALL'S CATARRH MEDICINE** is taken internally and acts through the Blood on the Mucous Surfaces of the System. All Druggists 75c. Testimonials free. \$10.00 for any case of catarrh that **HALL'S CATARRH MEDICINE** will not cure.

**Coughing**  
is annoying and harmful. Relieve throat irritation, tickling and get rid of coughs, colds and hoarseness at once by taking

**PISO'S**

**PREVENT WINTER ALFALFA KILLING**

Common Saying Among Well-Posted Farmers That Plant Won't Stand "Wet Feet."

**AVOID DEEP LOOSE SEEDBED**

On Land That is Not Well-Drained Crop Will Either Drown Out or Heave Out in Course of Few Seasons—Other Factors.

Poor drainage is one cause for winter-killing. It is a common saying that alfalfa will not grow with "wet feet," and in land which is not well drained the crop will either drown out or heave out in the course of a few seasons. A deep loose seedbed is an unfavorable

Splendid Field of Alfalfa.

condition for starting alfalfa, and the young plants in such a seedbed are likely to dry out or heave out during the first year. Other factors which have to do with decreasing the vitality of alfalfa plants, thus making them more susceptible to winterkilling, are weeds, insects, diseases and animal pests, particularly moles and gophers.

The factors named are qualifying factors which reduce the vitality of the alfalfa, making it more likely to winterkill, but even under the most favorable conditions of growth, alfalfa frequently winterkills in our northern climate, and this is the condition which we desire to investigate.

**Kinds of Winterkilling**

Winterkilling is brought about in different ways—by the heaving of the soil, by the smothering of the plants under ice, and through the killing of the roots by the extreme cold.

The heaving of the soil by alternate freezing and thawing lifts the root growth, and when the soil thaws, it settles with it. The soil, on freezing, takes a new hold on the roots which are again raised. Thus the alternate freezing and thawing finally draws the roots of the plant out of the ground, sometimes several inches, breaking off the tap root, and in the case of young plants, the roots are frequently thrown out on the surface.

Winter rains or winter thaws may cause the fields to become covered with a sheet of ice, which, if it continues long, is almost sure to smother alfalfa or clover, and even grasses and fall grains are liable to injury in this way.

The killing by extreme cold is most likely to happen in a dry open winter, and new seedlings, especially late seedlings in which the plants are shallow rooted, and afford little cover, are most likely to be affected.

Often old fields which have been pastured are practically destroyed, while fields which had considerable fall growth left on the ground are not damaged so much. In the ordinary winter, the protection afforded by a strong fall growth is usually sufficient to prevent any winterkilling.

**Winter Protection Favored.**

It is evident that when the conditions are too severe, winter protection, while it may help some, will not prevent some winterkilling by which a good stand is thinned or destroyed. Prevention should always be taken, however, to give such winter protection as may be afforded by the growth of the alfalfa after the last cutting. Too late cutting should be avoided as well as too close pasturing. In fact, it is doubtful whether alfalfa fields should be cut or pastured after September 1.

**RETAIN FERTILITY ON FARM**

Much Taken Off That Might Be Returned to Soil if Crops Were Fed to Live Stock.

In the marketing of hay and roughage there is a large bulk to handle and haul to the point of delivery. The United States department of agriculture points out that this means much extra labor for the men and teams on grain and crop farms, and much fertility is taken off which might be returned to the fields if the products were fed to live stock.

**FEEDING SILAGE TO DIFFERENT ANIMALS**

Feed Any Place Where It Can Be Done Without Waste.

Good Plan to Supply It to Cows in Barns After Milking Has Been Completed—Not Advisable to Give Too Much to Horses.

"Corn silage may be fed out of doors in bunks, in the stall, or in fact any place where animals can eat it without waste," says R. W. Clark of the Colorado Agricultural college.

"In feeding milk cows it is a very good plan to give the hay in racks outside or some place where the animals will not waste it, and feed the ensilage in the barn after milking. It may be given twice a day in rations from 10 to 15 pounds at a feeding or 20 to 30 pounds per day.

"Some large animals will take as high as 40 to 50 pounds of silage per day and make good use of it. In feeding fattening stock or steers, silage may be fed twice a day in smaller rations ranging from 10 to 15 pounds at a feed for grown stock and for young animals from 6 to 12 pounds.

"Sheep will consume from 2 to 4 pounds daily and horses from 4 to 12 pounds when not working.

"It is not advisable to feed work horses large quantities of silage no more than to give them large quantities of new grass.

"Feed the ensilage so that the animals will eat it up clean, as it spoils when exposed to the air for several days."

**ADVANTAGE OF SELF-FEEDER**

Hogs Not Entirely Finished in Cornfield Should Make Profitable Gains in Drylot.

Some feeders believe that hogs which are not entirely finished in the cornfield do not make efficient gains if removed from the field and fed grain in a drylot. There is no reason why this should be true provided the drylot ration is equal in amount and quality to that which the hogs have been obtaining in the cornfield. If the unfinished animals are full-fed on corn, properly supplemented, they should make profitable gains in drylot if they have been previously doing so in the cornfield. The trouble is usually caused

Fall Pigs at Self-Feeders.

by the fact that the amount of the ration is decreased when the hogs are removed. A self-feeder can be used to excellent advantage in such cases.

**ADVANTAGES OF A SILO**

(By R. W. CLARK, Colorado Agricultural College, Fort Collins, Colo.)

1. One-third greater returns can be secured from the land than when the corn is cured the ordinary way.
2. More live stock can be kept with silage than without it.
3. More of the corn crop can be saved than in any other way. This saving varies from 35 to 50 per cent.
4. Surplus silage can be carried over to years of scarcity. Good silage will keep for years.
5. The value of straw is greatly increased by feeding it with silage.
6. Silage nearly doubles the profits of dairying.
7. Silage increases the profits of beef from 25 to 50 per cent.
8. Good silage is a splendid and economical feed for horses, but poor silage may kill them.

**FAILURE IN RAISING CALVES**

One of Most Common Causes is That of Overfeeding, Which Usually Results in Scours.

One of the common causes of failure in raising calves is that of over-feeding, which usually results in scouring. When scouring occurs, the amount of milk fed should be reduced, or in severe case no milk at all given until the trouble ceases.

**VALUE OF POULTRY PRODUCTS**

Equal in Value to One-Half of Corn Crop—Easy Matter to Double Output of Chickens.

The poultry products of our nation are equal in value to one-half the entire corn crop of the nation. It would be fairly easy to double the output of poultry and make that industry equal in value to the corn crop.

**FARM POULTRY**

**VENTILATION OF HEN HOUSE**

For Success With Poultry There Must Be an Abundance of Fresh Air Without Drafts.

Poultry raisers have come to realize that the ventilation of the poultry house is a very important matter. There must be an abundance of fresh air without extreme heat or cold, and without dampness and draft. Proper conditions cannot be had with the makeshift, wrongly used ventilators frequently employed.

One method, which has proved successful is to use the straw air strainer. A second ceiling is built about six inches below the regular ceiling, in the form of a latticed framework. A trapdoor in the center of this makes it possible to change the straw which is packed between the lattice and the original ceiling. Vents, or wide, low

Muslin Ventilators Can Be Used in the Poultry House to Secure Abundance of Air Without Either Drafts or Extremes of Temperature.

openings, must be cut in the side of the house as close under the eaves as possible. The air, entering at these vents, filters through the straw, and thus into the poultry house. No drafts are possible, and the temperature is kept very nearly constant. The straw also absorbs a great deal of moisture.

Another method, in rather wide use, is to cover an ordinary window frame with muslin, instead of using glass. An improvement on this type of ventilator is shown at the right of the drawing. A light wooden frame covered with muslin is hung from a wire, which serves as a track. The frame can thus be moved sideways over or away from the window opening. Screw eyes on the frame allow it to slide easily over the wire. The wire itself may be fastened either to screw eyes or over blocks at either end. To the left is shown a similar frame, moving up and down. In this case it will be necessary to arrange some means of holding the frame at the height desired. Either the pegs that fit into holes in the wall, or a hook fitting into screw eyes, placed at various heights in the wall, may be used for this purpose.

The advantage of the air strainers over muslin-covered frames is that the latter have to be adjusted accurately to the weather, while the air strainer requires no attention whatever.—J. T. Bartlett, Fort Collins, Colo., in Popular Mechanics Magazine.

**COVER WINDOW WITH BURLAP**

Most Excellent Plan to Keep Out Wind at Night While Fowls Are Roosting.

If the poultry house is narrow so that the wind blows in through the open windows on the fowls on the roost, put a piece of burlap over the open space at night, but do not close the windows until the weather gets cold.

**FATTEN FOWLS FOR MARKET**

Poultry Will Sell for Higher Price Per Pound Because of Increase in Weight.

If any stock is to be sent to market be sure that it is fattened well before it is shipped. It will pay to do this because the poultry will sell for a higher price per pound and it will weigh more.

**POULTRY NOTES**

Cull out weak or slow growing chicks.

A larger flock of hens could be kept on many farms at a profit.

Water fowls do not receive the consideration they deserve on many farms.

Leghorns produce eggs more cheaply than hens of the general purpose breeds.

Don't forget to give the fowls a little salt, in some form every day. They like their food seasoned as well as we do. Pepper as well as salt.

Boarders in the shape of lice and mites on fowls are unnecessary. The energy absorbed by these parasites will never go into eggs and meat.

**PE-RU-NA**  
Made Me a Well Man

Mr. Louis Young, 1652 Clifford St., Rochester, N. Y., writes:  
"I suffered for thirty years with chronic bowel trouble, stomach trouble and hemorrhages of the bowels."  
"We bought a bottle of Peruna and I took it faithfully, and I began to feel better."  
"My wife persuaded me to continue, and I took it for some time as directed. Now I am a well man."

Liquid or Tablet Form

Many a young man doesn't propose for the reason that he is afraid the girl will say yes.

A ray of hope is capable of penetrating the darkest despair.

**FRECKLES** POSITIVELY REMOVED by Dr. Burnett's Freckle Cream. Your agent at 2075 Michigan Avenue, Chicago, Ill., 2075 Michigan Avenue, Chicago, Ill.

FOR SALE—1/2 section, half in cultivation, small house, route, telephone, good water, \$4,000. Terms, Tom Cramer, Dighton, Kan.

W. N. U., OMAHA, NO. 1-1920.

**Stock Raising in WESTERN CANADA**

is as profitable as grain growing. Successes as wonderful as those from growing wheat, oats, barley, and flax have been made in raising Horses, Cattle, Sheep and Hogs. Bright, sunny climate, nutritious grasses, good water, enormous fodder crops—these spell success to the farmer and stock raiser. And remember, you can buy on easy terms

**Farm Land at \$15 to \$30 An Acre**

—land equal to that which through many years has yielded from 20 to 45 bushels of wheat to the acre—grazing land convenient to good grain farms at proportionately low prices. These lands have every rural convenience, good schools, churches, roads, telephones, etc., close to live towns and good markets.

If you want to get back to the farm, or to farm on a larger scale than is possible under your present conditions, investigate what Western Canada has to offer you.

For illustrated literature with maps and particulars regarding reduced railway rates, location of land, etc., apply to Department of Immigration, Ottawa, Canada.

**W. V. BENNETT, Room 4, Bee Building, OMAHA, NEB.**  
Canadian Government Agent.

There are times when it is better to be "never" than late.

Garfield Tea, taken regularly, will correct both liver and kidney disorders.—Adv.

It is said that married men make the most satisfactory workmen; they can be bossed.

**Did Her Best to Get There.**  
When Lucy's teacher told her that she was five minutes late for her call, she replied: "I didn't mean to be late, and if I hadn't runned all the way, I'd been a heap later."

**Had the Idea, All Right.**  
Teacher asked Gertrude if she knew the difference between "man" and "men." "A man is one man and men is a lot of mans," was the child's reply.

**No Accounting for Tastes.**  
"Did you ever fall in love with a bareback rider in a circus when you were a boy?"  
"No," replied Mr. Grimptin. "People used to say I was a queer boy. I passed up the bareback rider and the lovely trapeze performers in their pink and white tights to worship at the shrine of a snake charmer of mature years."—Birmingham Age-Herald.

**Your Family Tree.**  
You had a father and a mother, and you grant that each of them had two parents, thus declaring that you had four grandparents. Then keep on going backward.

Fifty-four generations ago you had 2,251,790,813,685,248 ancestors (of course the decimal does not count here). Count thirty years to a generation and your many ancestors existed 1,620 years ago in the year 290 A. D.

This seems like good arithmetic, but I cannot vouch for its historical accuracy. Better look it up and see.

**And There Are Other Public Bodies.**  
"There are scientific questions," said Sir Oliver Lodge recently, "that will never be answered." One of these was recently propounded by the Basuto chief, who, after listening to the house of commons for an hour, asked what it was for.—London Punch.

Yes, Rosie, time is money to the bookmaker when your horse fails to come in.

Speaking of ducks, it takes greenbacks to catch canvasbacks.

No race with  
Coffee prices!

**POSTUM CEREAL**

is still selling at  
the same fair price,  
and is better for you.

Try it!

Two sizes, usual price 15¢ and 25¢

Made by  
Postum Cereal Co. Battle Creek, Mich.
