**Bad Stomach**  
Sends Her to Bed  
for 10 Months

**Eaton Gets Her Up!**

"Over a year ago," says Mrs. Dora Williams, "I took to bed and for 10 months did not think I would live. Eaton helped me so much I am now up and able to work. I recommend it highly for stomach trouble."

Eaton helps people to get well by taking up and carrying out the excess acidity and gases that put the stomach out of order. If you have indigestion, sourness, heartburn, belching, food repeating, or other stomach distress, take an Eaton after each meal. Big box costs only a trifle with your druggist's guarantee.

**Shave, Bathe and Shampoo with one Soap.—Cuticura**

Cuticura Soap is the favorite for safety shaving.

Not Too Thrifty.

"How much do you charge a fellow to take a wash?" asked a grimy looking individual of the cashier at a public bath house.

"Fifty cents a bath, or 12 for \$5," replied the cashier. "It would pay you to buy a \$5 ticket."

"Nothin' doin'!" answered the grimy individual, decisively. "How do I know I'm going to live 12 years?"—Toledo Blade.

Paradoxical Need.

"I assure you, a new camera is a positive necessity." "And yet it is a negative proposition."

Every woman who hears of a woman hater believes she would alter his views if she were to meet him.

**WASHINGTON**  
**SIDE LIGHTS**

**Saving Fish That Stray in Flood Time**

being supplemented by those of several states.

During the fiscal year 1920, more particularly in the period from July to November, the number of food fishes rescued from the overflowed lands bordering the Mississippi and tributaries reached the noteworthy total of 156,650,000, all of which would inevitably have perished. This salvaged output, which was about 100,000,000 in excess of the results in any previous season, was returned to the open waters in the vicinity of the points of collection, with the exception of less than 1,000,000 fishes of various species of bass that were used in supplying individual applicants or in satisfying the requisitions of fish commissions.

The young fish saved in the 1920 operations, if they had been hatched and reared in the usual manner at the ordinary fish-cultural establishments, would have required several hundred such stations to produce. The entire cost of the rescue work was only 13 cents per 1,000 fish for about 75 per cent of the output. The expense was higher at certain points where the collections were lighter and the overhead charges were fixed, so that the average cost was somewhat under 20 cents per 1,000 fish rescued and planted.

**McCormick Would Shake Up Departments**

**ABOLITION** of the Department of the Interior, creation of two new departments—one to be known as the Department of Public Works and the other as the Department of Public Welfare—and general reorganization of other governmental departments is proposed in a bill prepared by Senator McCormick, Republican, Illinois, for introduction at this session of congress.

Senator McCormick is now in Europe and the principal provisions of his bill were outlined in a statement issued from his office. The statement said that while the bill would be introduced early in the session action on it probably would be deferred until after the inauguration of President-elect Harding. The statement added that the Illinois senator, after completing the measure, discussed the proposed changes with Mr. Harding, "who expressed great interest in the bill."

The proposed Department of Public Works, under the bill, would include all important engineering and building services of the government. The department of public welfare would include various welfare agencies of the government, such as the woman's bureau, now in the Department of Labor; the pension bureau, now in the Department of the Interior; the public health service, the bureau of war risk insurance and the vocational training board.

The Department of Commerce would

**Legnorns** are well adapted for production of eggs.

table scraps for the production of fowls and eggs for home consumption.

To encourage turkey, duck and geese raising when circumstances are favorable.

**TO KEEP HENS COMFORTABLE**

House Must Be Kept Dry, Well Ventilated and Sufficient Space for Scratching.

The poultry house is both the home of the hen and the factory where winter eggs are produced, and unless it provides suitable living and working conditions the hen cannot be expected to lay well. The chief requirement is that the house must be comfortable for the birds. To be comfortable the house must be dry, well ventilated, well lighted and have sufficient floor space to provide exercise by scratching. Dryness is insured by having a good roof, keeping the floor of the house higher than the surrounding ground, and by providing good ventilation. Ventilation must supply plenty of fresh air without drafts. This is secured in the poultry house by having the south side relatively open and the other three sides absolutely tight. The importance of light in the poultry house has not been properly emphasized in the past.

**FERTILE EGGS FOR HATCHING**

Maximum Fertility/Not Likely to Be Obtained Before Two Weeks After Mating Fowls.

Matings should be made at least two weeks before beginning to save the eggs for hatching. If less time is allowed, the maximum fertility is not likely to be obtained. It is often desirable to mate even further ahead than two weeks so that a few eggs can be incubated for five or six days to see whether they are fertile. If these eggs are not fertile, there is still time to change the male bird and thus be sure of fertile eggs for the earlier hatches.

**FRESH AIR VERY IMPORTANT**

Not Advisable to Close All Windows at First Approach of Cold Weather in Fall.

Don't close all the windows in the henhouse at the first approach of cold weather, but leave some of them open. If the wind blows in, put a piece of burlap over the open space to keep out the wind, but let in air.

be enlarged so as to increase its usefulness to business.

Creation of an office in the state department to have jurisdiction over insular affairs and territories such as Alaska would be provided for. The alien property custodian's office and the division of the secret service would be placed under the department of justice. The office of the comptroller of currency would be abolished and its function transferred to the federal reserve board.

The McCormick measure also would abolish the board of mediation and conciliation and transfer its functions to the Department of Labor, and abolish the council of national defense and discontinue its functions.

The measure transfers to the department of commerce the weather bureau, patent office, coast guard, lake survey office, hydrographic office, naval observatory and inland and coastwise waterways service.

**We Are Living in a Tenth-Second World**

that as rapidly as the permanent status of military posts becomes known negotiations will be opened with the telephone companies for the purchase of war activity telephone systems.

Asserting that with suitable apparatus messages may be exchanged between any two points on the surface of the globe, General Squier says we are in fact living in a "tenth-second world," since with suitable equipment any radio impulse passes between any two points within this time.

Perhaps the most important of the many developments worked out during the year by the signal corps has been the putting into practical use of General Squier's own invention of applying radio telephony and telegraphy to bare wires laid in the sea or in the earth.

New developments include a system of potential wave engineering involving no earth return, the utilization of wave coils as antennae and a static elimination scheme.

In addition there has also been carried out during the year a number of experiments with wired radio on rail road lines which resulted in the superposition of radio telephone and radio telegraph circuits on ordinary wire telephone and telegraph circuits over a maximum distance of 150 miles.

**Poor Old Nineteenth Amendment in Bad**

Poor old Nineteenth amendment's troubles are far from being over, according to the National Association opposed to Woman Suffrage. Anyway, the organization with this elongated and impressive name says it has just begun to fight.

In other words the National Association Opposed to Woman Suffrage announces that it has begun a new campaign. There are two purposes which animate the association and inspire the campaign. One is nothing less than the repeal of the Nineteenth amendment. The other is the passage of legislation to restore "state rights." It proposes to have congress pass an amendment requiring ratification by popular vote of all amendments to the Constitution.

The anti-suffrage association, in an analysis of the woman vote in the recent election, says, "the majority of

women stayed at home" and "instead of twelve million only nine or ten million women voted."

"In other words," says the analysis, "only one-third of the 27,000,000 women eligible to vote, about which the suffragists have been shouting for years, could be persuaded to go to the polls."

No wonder the N. A. O. T. W. S. is on the war path.

**POULTRY**

**PLAN TO INCREASE POULTRY**

Department of Agriculture Recommends Careful Selection of Breeding Stock.

The campaign that has been inaugurated by the United States Department of Agriculture to stimulate and increase poultry production along more efficient lines is divided into the following phases:

Careful selection of breeding stock to reproduce a larger percentage of good types of profitable producers.

Early hatching, so as to produce fall and winter layers.

To confine mother hens to brood coops for at least two weeks after the chicks are hatched.

To provide free range for both growing stock and layers in so far as possible to stimulate growth and production and conserve food consumption.

To preserve eggs for winter use.

The production of infertile eggs as soon as the breeding season is over.

Disposing of surplus cockerels as broilers to conserve grain.

To discourage the marketing of all profitable hens of the general purpose class until the end of their second year, and of the Mediterranean or egg class until the end of their third laying year.

To encourage the careful selection of all hens in order to eliminate the unprofitable producers.

To discourage the marketing of all profitable pullets as broilers and of all well-matured pullets for meat.

To encourage the caponizing of cockerels only when free range can be provided and a special nearby market afforded.

To encourage back-yard poultry keeping, especially among city and suburban dwellers, thereby utilizing

**A Change for Company.**

In a North side ment market a woman and her little boy stood at the counter awaiting the preparation of an order of lamb chops. While the cutter was frenching the chops and getting them ready for their little white pantalettes the boy pulled his mother down to whisper into her ear, "Mamma, aren't you going to get some weinies?" "S-s-h, Lawrence," she admonished, "we have to have something different for company."—Publishers' Auxiliary.

**Physical Endurance.**

"Some of those old-time statesmen patiently wrote out their speeches and other documents with pen and ink."

"Yes," rejoined Senator Sorglum. "But they had the strength left. It wasn't so customary in their day for a man to get out in a campaign and shake hands with the whole world."

**His Views.**

"Are you saving up for a rainy day?"

"What's the use? Things will never be wet again."

**Legnorns** are well adapted for production of eggs.

table scraps for the production of fowls and eggs for home consumption.

To encourage turkey, duck and geese raising when circumstances are favorable.

**TO KEEP HENS COMFORTABLE**

House Must Be Kept Dry, Well Ventilated and Sufficient Space for Scratching.

The poultry house is both the home of the hen and the factory where winter eggs are produced, and unless it provides suitable living and working conditions the hen cannot be expected to lay well. The chief requirement is that the house must be comfortable for the birds. To be comfortable the house must be dry, well ventilated, well lighted and have sufficient floor space to provide exercise by scratching. Dryness is insured by having a good roof, keeping the floor of the house higher than the surrounding ground, and by providing good ventilation. Ventilation must supply plenty of fresh air without drafts. This is secured in the poultry house by having the south side relatively open and the other three sides absolutely tight. The importance of light in the poultry house has not been properly emphasized in the past.

**FERTILE EGGS FOR HATCHING**

Maximum Fertility/Not Likely to Be Obtained Before Two Weeks After Mating Fowls.

Matings should be made at least two weeks before beginning to save the eggs for hatching. If less time is allowed, the maximum fertility is not likely to be obtained. It is often desirable to mate even further ahead than two weeks so that a few eggs can be incubated for five or six days to see whether they are fertile. If these eggs are not fertile, there is still time to change the male bird and thus be sure of fertile eggs for the earlier hatches.

**FRESH AIR VERY IMPORTANT**
