SANITARY TERMS EXPLAINED TO LAYMEN BY AGRICULTURAL EXPERTS

Pointing out that an insecticide is not a dependable disinfectant and that there is a wide difference between an antiseptic and a deodorant, the United States Department of Agriculture emphasizes the use of the right preparation in disinfecting premises. Sanitation is especially important in preventing losses from animal diseases and along with attention to cleanliness, disinfectants are frequent after an outbreak of a contagious disease. Here is condensed information on the subject, prepared as a result of the department's experience in advising persons who misunderstand the purpose and correct use of disinfectants.

The word "infected" means contaminated with or affected by disease germs; "disinfected" means freed of disease germs. "A disinfectant is a product that destroys disease germs or renders them harmless. An "antiseptic" is a substance that prevents the development and growth of disease germs, but an antiseptic is not a disinfectant unless it is capable of destroying disease in addition to preventing their growth.

A disinfectant is not necessarily an "insecticide" for some powerful disinfectants are relatively harmless for insects and the best insecticides may be of little value as disinfectants. Formaldehyde is one of the most powerful disinfectants known, but it is a very weak insecticide; and conversely hydrocyanic acid is deadly for insects and all forms of animal life, while it has little power as a germicide or disinfectant. It is well to remember that "deodorants" are not necessarily disinfectants—one destroys odors, the other destroys germs. No single disinfectant is appropriate in all cases. Select the proper substance, apply liberally, allow ample time for the disinfectant to do its work, and remember that success depends in large part upon the care and exactness of the person who prepares and applies the disinfectant.

HENS ARE GOOD FOR SOMETHING BESIDES LAYING EGGS

On the Scottsbluff reclamation project, Mitchell, Nebr., where the grasshopper pest has been particularly bad this year, various methods of control have been tried out. One of the most successful methods observed so far was used by a farmer who has a quarter section of land. Five hundred chickens divided into lots of 100 were kept in colony houses on 80 acres of the farm and moved about as occasion required. As a result, on the half of the farm where the chickens were pastured there were only about 20 per cent as many no-poppers as on the other 80 acres. This is a better showing than has been made on most of the fields where poison was distributed. The owner and the renter found the method profitable. After they had used what they needed of the poultry for domestic purposes and after the weasels and coyotes had taken their toll, the rest were marketed and brought in about 75 per cent of the original investment. This year the owner is stocking the farm with 1,000 chickens as insurance against the grasshopper pest.

Girls Slumber Party
The Sacajawea campfire girls were entertained at a slumber party at the home of Janet Green Wednesday evening. Breakfast was served at 7 o'clock.

Entertains Twenty Friends
Helen Edwards entertained twenty of her playmates at a party yesterday afternoon in honor of her eighth birthday. The afternoon was spent in playing games. At the close of the afternoon a dainty lunch was served.

Party at Hershey
Mrs. Simon White and Mrs. F. A. Aldridge entertained at a chicken dinner at the White home Sunday at Hershey. The guests were Mesdames VonGoetz, Adams, Welch and Sizemore.

Birthday Party
Doris Williams entertained fifteen of her playmates at a birthday party Wednesday afternoon, the occasion being her fifth birthday. The afternoon was spent in playing games. A dainty lunch was served.

Birthday Party
Mrs. J. M. Baker and Mrs. Mary H. Elder entertained at a birthday party at the Baker home Wednesday. The occasion was Mrs. N. Kilen's 85th birthday. There were three children present, fourteen grand children, ten great grand children, and two great-great grand children. The only out-of-town guest was a daughter, Mrs. William Snelling who lives in San Diego, California.

Surprise Party
Last evening twelve girls entertained at a surprise party for childred Cressler in honor of her seventeenth birthday. The evening was spent in playing games after which a delicious three course luncheon was served. The house was decorated in cut and garden flowers and the color scheme was carried out in pink and white. The girls presented Mildred with a beautiful bracelet.

Another of the beautiful new Dodge Coupes will be on view at our show room next week. We have four more of them sold on future orders and it will pay you to file your order at once. J. V. Romigh—Dealer.

Mr. and Mrs. James Loudon of Denver came last evening. They were called here by the death of the former's brother N. E. Loudon.

GRASSHOPPERS ARE DOING BIG DAMAGE AS PREDICTED BY EXPERTS

Active work against grasshoppers this season is going on in Sheridan County, Wyo., according to reports received by the Bureau of Entomology of the United States Department of Agriculture. Early in May the attention of farmers and business men was directed by the district entomological specialist on grasshopper control, and by the county agent to the fact that thousands of eggs could be found by digging under the surface of the fields and that these eggs would be ready to hatch about June 1.

Before holding a mass meeting to organize the county, a party of bankers and business men visited the infested areas and were so impressed with the probability of an impending grasshopper plague that they pledged complete financial support to the campaign.

An estimate of the amount of poison needed was made and the board of county commissioners backed the campaign by depositing a non-interest-bearing warrant with the banks of the city for \$15,000 as a guaranty to the banks for advancing money for poisoned bait. The Farm Bureau aided by the Commercial Club of Sheridan, is conducting the campaign. The County Agents have sent out notices that farmers must distribute the poisoned bran or it will be done by the county at the expense of those who refuse to spread the poison. At a second mass meeting addressed by the grasshopper control specialists many farmers told what poisoning had saved them in previous campaigns. It is expected that this year's well co-ordinated work will rid the county of hoppers before they have any chance to damage crops seriously.

The Meter Is As Accurate as Your Watch

It has to be! It would mean a big loss in dollars and cents and in the good will of our customers (which is worth a good deal more) if every meter wasn't just as accurate as a fine watch.

We don't make our own meters, of course. They're made by an outside disinterested manufacturing company who has but one object—to turn out a perfect product.

No meter can register unless gas is passing through it. No meter, correctly adjusted, can register more gas than is passing through it. Every meter is tested before it goes into your home, of course. In some sections of the country, meter inspectors are employed by city or state. Their job is to test meters and do nothing else.
