

CHATS WITH YOUR GAS MAN

We do not say much about it, but as an industry we are growing by leaps and bounds. Look at these facts:

Last year the American people consumed three times as much gas as they did twenty years ago and double the amount used ten years ago.

In 1860 the largest gas holder in the country held but two million cubic feet of gas. Today holders are built with a capacity of fifteen million cubic feet.

If the gas now used annually by the American people were all made and stored at once, just for one day, it would require a tank large enough to cover the entire state of Rhode Island and more than fifteen feet high to hold it all.

We are making quite a little progress, don't you think?
