Operations at the Honey Creek
coal mines, near Peru, have had
to be suspended during the past
week or two because of the fact
of the mine being on fire.

Coal dust that had accumulated
in the first room of the mine, be-
came ignited by spontaneous
combustion and the flames com-
municated with the seams of coal.
These have smouldered away, and
when they fill the mine with
choking smoke and too intense a
heat, the tunnels and openings to
the mines are all sealed up and
the air cut off.

This causes the fire to become
smothered and the miners are
again enabled to work under
favorable conditions.

It is reported that several other
workable veins have been dis-
covered near the Honey Creek
mines and that arrangements are
being made to work the field
on a larger scale.—Auburn Re-
publica n.
