Sight is priceless and its proper preservation is a matter for the most earnest consideration of every person of ordinary common sense. Remember that a lens decentered one centimeter (the one hundredth part of an inch) produces as many prism diopters as it possesses lens diopters of refraction. Don't wear poorly made spectacles when you can get reliable ones at the same price. Tudor's Adamantine lenses are ground from the clearest crystal obtainable, building up the nerve power, easy and rendering natural the accommodation, they are without doubt best adapted for optical purposes and are recommended by all the most eminent of the medical fraternity, including
