The development of a school from small beginnings into a great educational institution, is directly traceable to a careful selection of the best ability and minute attention to the details of administration. No minute attention to the details of administration. No nstitution is so favorably known in this respect as the New England Connervatory of Music in Boston. With nearly a million dollars invested in its magnifi-cent buildings, and with courses in music and elocu-tion and practical instruction in piano and organ tuning, the advantages offered are unparalleled, and prove beyond question that the student can make no mistake who selects this school in preference to any other, at home or abroad.

How Successful Farmers Operate This Department of the Farm-A Few Hants as to the Care of Live Stock

(Condensed from Farmers' Review "A Bundle of Nerves."
This ter is often applied to people whose nerves are abnormally sensitive. They should strengthen them with Hoscetter's Stomach Bitters. After a course of that beniga tonic, they will cease to be consclous that they have nervous systems. excent through agreeable sensations. It will enable them to eat, sleep and digest well, the three media for increasing tone and vigor in the nerves, in common with the rest of the system. The mental worry begotten by nervous dyspepsia will also disappear. tenographic report of Wisconsin Round-up Institute.)

C. TAYLOR spoke on how to get good cows. There are three things that enter into successful dairying: First, the dairy tendency of the cows: second, the fertility of the farm and its

food for the cows. The third thing to be taken into consideration is the dairyman. Then it is necessary that there be the ability to apply modern dairy methods. If he be not a dairyman he will never succeed. Q.—Should a dairyman raise his own

cows? A .- Yes, sir; if he can, and as much as possible.

Q.-Can you increase the percentage of fat in the milk of cows? A .- That can be done only by good

Charles Thorp spoke on handy things on the dairy farm. He said that every man should have a dairy house on his arm. His dairy house is located near the well, where every dairy house should be located for the purpose of

having the water handy. The house is 30 by 14, the first twelve feet being used for the dairy room proper. Then there is the cream vat, which is a

more practical fowl for the farmer, or | "OLD HICKORY'S" INAUGURAL? those who keep poultry for market. The Buff Wyandotte is in color a rich, deep, clear buff, uniform in shade throughout, except the tail, which is of a deeper buff or copperish-bronze color. The Blacks are of a rich, glossy black, with greenish sheen, excepting breast primaries, secondaries, tail and fluff, which are pure black. The standard weight of cocks is 81/2 pounds; hens, 61/2 pounds; cockerels 7½ pounds; and pullets, 5½ pounds.

The early hatched pullets are now large enough to permit of intelligent selection. The culls should be disposed of, and the best reserved for laying and breeding, says Farm Journal. If the cockerels have become sufficiently matured to be troublesome, they should be separated from the pullets and fattened for market. Although the price may be low now, it seldom pays to keep early hatched birds for fall and winter sales. To develop the pullets into good laying hens, an exclusive diet of corn must be avoided. They need bone and muscle, but to get enough of this out of corn they must eat an excessive quantity of it and this will produce too much fat. This caution must be heeded when the pullets have only a limited run and but little pasture. In these circumstances with the corn ration, green grass, clover, green fodder and some vegetables, with milk and cut bone, or meat meal must be supplied to secure a healthy development. The farmer's flock that has the range of the fields, and access to a great variety of food, may thrive on a ration of corn because it is not their exclusive dlet. We have, however, often seen farmers' premises where for two or three hundred yards from the buildings the poultry had eaten every green thing except weeds that was not en-closed by chicken proof fences. Such great saving of labor, and should be a runs become polluted and the fowls part of every outfit. By its use we suffer for the lack of insects and green have to churn only once a week. It food. The owner feeds the customused to be necessary to churn every ary corn ration and wonders why his day or every other day. Now the cream | flock do not thrive and the pullets do can be held sweet by the means of ic : not lay. The development of pullets for a long time. The next six feet of for laying is very much like that of

A Mob Followed Him from the Capitol and Invaded the White House Mr. Bishop says of President Jackson's inauguration in the Century:

An eye witness who took a somewhat locose view of the day's events wrote that the most remarkable feature about Jackson as he marched down the aisle of the senate with a quick, large step, as though he proposed to storm the capitol, was his double pair of spectacles. He habitually wore two pairs, one for reading and the other for seeing at a distance, the pair not in use being placed across the top of his head. On this occasion, says the eye witness, the pair on his head reflected the light, and some of the rural admirers of the old hero were firmly persuaded that they were two plates of metal let into his head to close up holes made by British bullets. When he appeared on the portico we are told that the shout which arose rent the air and seemed to shake the very ground. The ceremony ended, the general mounted his horse to proceed to the white house, and the whole crowd followed him.

"The president," says a contempor ary writer, "was literally pursued by a motley concourse of people, riding, running helter skelter, striving who should first gain admittance into the executive mansion, where it was understood that refreshments were to be distributed."

An abundance of refreshments had been provided, including many barrels of orange punch. As the waiters opened the doors to bring out the punch in pails the crowd rushed upon them, upsetting the pails and breaking the glasses. Inside the house the crush was so great that distribution of refreshments was impossible, and tubs of orange punch were set out in the grounds to entice people from the rooms. Jackson himself was so pressed against the wall of the reception room that he was in danger of injury and was protected by a number of men linking arms and forming a barrier against the crowd. Men with boots heavy with mud stood on the satin covered chairs and sofas in their cagerness to get a view of the hero. Judge Story wrote that the crowd contained all sorts of people, from the highest and most polished down to the most vulgar and gross in the nation. "I never saw such a mixture," he added. "The reign of King Mob seemed triumphant. I was glad to escape from the scene as soon as possible."

GATHERING RUBBER.

How the Natives of the French Congo

Work.

The natives of the French Congo 'cut rubber" in March and April. The rubber of Congo is not a tree, but a vine, often three or four inches in diameter, and is found in the jungle, says an exchange. Natives who scorn to be industrious at all other times of the year work hard during the season of rubber gathering. Before the cutters start out the whole village in which they live indulges in a tremendous debauch, after which the men strike out boldly into the jungle, well laden with food, for there are few edibles in the rubber districts. The vines climb up the trees, and as only the upper and smaller portions of the vine produce desirable sap the men have to climb to the height of the first branches, often as much as fifty feet, to do their work. After the pieces are thrown to the ground they are cut again into lengths of three or four feet and are then held over pots so that the juice will run out. When a pot is nearly full the juice is boiled down for several hours, during which time it is mixed with juices of several other vines, which renders the mixture sticky and more easily formed into balls. When it is cooled sufficiently to be handled it is shaped by winding it first around a stick. After a while the stick is pulled out and the ball rewound. In some cases these balls weigh three or four pounds; in some

pound. The best and purest rubber is obtained in the shape of bracelets, which are made by the natives catching the juice as it runs out around the wrists, where it is allowed to dry. When perfectly set it comes off easily and would be transparent if the negroes' arms and hands were not dirty.

others it takes five or six to make one

Our School Books.

The great fuss made by the G. A. R. over school histories will accomplish much good if sectional bitterness is avoided. As the matter stands now, the publishers are entirely to blame. There are firms in the school-book publishing business who employ a man in each state to write the history of that state, and he is expected to glorify things within its borders. He is generally a partisan. Whatever of prejudice he may have against national institutions is eliminated, but a great deal of unhistoric exparteism is jammed through the completed work.

Our little Duchess of Marlborough has been a guest of the queen. Good. The dispatches from London say: "Eighteen months ago Consuelo Vanderbilt was a plain American girl." Not so! She never was "plain." Consuelo was distinguee at the age of 10, and, as Miss Vanderbilt, was regarded

REV. J. B. WADE, Cured of CONSTIPATION.

Dr. Kay's Renovator

This remarkable medicine has cured so many of the worst cases of constipation that it certainly REMOVES headache, biliounness, indigestion, as well as every other trouble which linds its cause in constipation. It strikes to the very root of the trouble and cures THE very worst cases which seem to be obscure and in which physicians and all other remedies fall to cure or give relief. It is the best medicine for impuse blood, the CAUSE of which may be scrofula, erysipelas, or other troubles, all of which are treated in our new book. "Dr. Kay's Home Treatment," a Cs page treatise on diseases which will be sent to any address for stamp. Dr. Kay's Renovator at druggists or by mall for 25c and 61. Address: Dr. B. J. FEATHERS OF SILVER-LACED WYANDOTTES. the building is used for a storage heifers for giving milk. Concentrated room. The rest of the building is used

for an ice room, which every man should have. Mr. Thorp then showed his system bone and muscle making materi of making artificial ice by natural cold. necessary to secure the healthy diges-He had on exhibition a model of a long box in which the ice is frozen. The box in which he freezes his ice is 14 feet long, 2 feet wide and 1 foot deep. The inside of the box is waxed with paraffine wax, which makes it easy to remove the ice when it is frozen. The waxing must be done during a warm day, and the wax should be used boiling hot, so the wax will stick to the box. In freezing he puts in only three inches of water at a time and lets that freeze before putting in more. He has been using three of these boxes for the last few years. With three of these boxes you can fill an ice house very quickly. When you loosen the ice from one of these boxes you have a single cake of ice 14x2x1, which is saw-

ed into cakes the size desired. A feed cutter comes very handy cn a farm, if it be not in such shape that it has to be set up every time it is to

be used. Q.-How do you build an ice hous. and how do you pack the ice?

A .- I would build it about as I would any common building, but I would make the walls double, with lath and plaster on the inside, and then I would paint the walls. I pack the ice with dry snow, and the cracks between the cakes I pack with dry snow also. I do not put the ice against the outside wall, but leave a six-inch space

which I fill with saw-dust. John W. Decker spoke on cheesemaking. The cheese industry is in better shape than it has been before for many years, due largely to the passage of laws against filled cheese. New York and Wisconsin are the great cheesemaking states. At the South and in some parts of the North dairying is not carried on to any great extent. So the states that make cheese will have to supply not only themselves but the others. Canada has been supplying the English trade. That is the trade that we are trying to supply with our product, and that trade requires a very firm article in the way of cheese.

Standard Varieties of Chickens.

The Golden Wyandotte is marked like the Silver, excepting that the color is golden-bay and black instead of white and black. The White variety is, perhaps, the favorite of the Wyandotte classes, from the fact that it is plumage being pure white throughgrain diet overtaxes the digestive organs and produces fat. Bulky succulent food, that which contains the tion and thrifty growth.

Wind Power.-Not nearly enough use is made of wind power. Most of the wind mills we see are used wholly to pump water from wells. Though this as a steady job probably saves as much labor as any one thing the wind power could be set to doing, there are many other back-aching jobs that are on many farms done by hand power, which might quite as well be given over to wind power. Turning grindstones and churning are among these. When young we knew some farmer wooden articles. All of these boys kept up their love of farm life because there can be no use of water power, for the land is too level. Nowhere in the world is wind power used to so much advantage or for so great a variety of purposes.-Ex.

Intelligent Dairying.-Dairying requires constant study and intelligent thought, it requires years in which to build up a profitable herd of cows and to learn how to feed and care for them an to handle the product. The man who can successfully breed and feed a dairy cow has a mind above the average. He is a student, a keen, bright business man, and you will not find this class of men dissatisfied with their business. It is the class of men who are constantly changing from one branch to another-men who do not do much figuring and cannot tell how much their cows earned individually or collectively-who have intense hatred for the Babcock test and for all creamery men.-Kansas Farmer.

not so difficult to breed to feather, the | London shows. The veterinarians condemned the practice as painful to the out. They are for this reason the animal and a fraud upon the judge.

boys who put up a light windmill which turned a lathe in a shop. Here they spent many hours making all kinds of their windmill was set to do tasks that on other farms the boys had to perform by what sailors call "main" strength and stupidness. In Holland

Gingering Horses.—Gingering horses at the horse shows, especially the saddle horse to make them carry their tail high up and to present an unusual amount of animation and appear smart. is a disgusting and deceptive jockey trick that should be prohibited by the rules of horse shows in this country as it doubtless will in England, since the Humane society prosecuted and fined a number of the grooms at the
