## HAVE YOU COWS?

If you have cream to separate a good Cream Separator is the most profitable investment you can possibly make. Delay means daily waste of time, labor and product.

DE LAVAL CREAM SEPARATORS save

\$10.- per cow per year every year of use over all gravity setting systems and \$5.- per cow over all imitating separators. They received the Grand Prize or Highest Award at St. Louis.

Buying trashy cash-in-advance separators is penny wise, dollar foolish. Such machines quickly lose their cost

instead of saving it.

If you haven't the ready cash
DE LAVAL machines may be bought on such liberal terms that they actually pay for themselves. Send today for new catalogue and

name of nearest local agent. THE DE LAVAL SEPARATOR CO. Randolph & Canal Sts. 74 Cortlandt Street
CHICAGO NEW YORK

CHICAGO NEW YORK What Stopped the Quarreling.
From the Kansas City Times.
One of the first persons a Hyde Park
woman saw upon returning from a summer trip to the Michigan lakes recently was her negro washerwoman, who called at the house ready to return to work. During the conversation that followed the

"'Mandy do you and your husband quar-rel like you used to?"
"No'm," replied the negress.

"No m," replied the negress.
"That's nice. Aren't you glad he doesn't quarrel with you any more?"
"Yes'm, 'deed Ah is."
"Well, 'Mandy, what caused you two to stop fighting?"
"He died," replied the washerwoman.

## YOU HAVE NO RIGHT

To Suffer from Constipation, Bowel and Stomach Trouble.

What is the beginning of sickness

Q. What is the beginning of sickness A. Constipation.
Q. What is Constipation?
A. Fallure of the bowels to carry off the waste matter which lies in the alimentary canal where it decays and poisons the entire system. Eventually the results are death under the name of some other disease. Note the deaths from typhoid fever and appendicitis, stomach and bowel trouble, at the present time.
Q. What causes Constipation?
A. Neglect to respond to the call of Nature promptly. Lack of exercise. Excessive brain work. Mental emotion and improper diet.

proper diet. Q. What are the results of neglected

Constipation?

A. Constipation causes more suffering than any other disease. It causes rheumatism, colds, fevers, stomach, bowel, kidney, lung and heart troubles, etc. It is the one disease that starts all others. Indigestion, dyspepsia, diarrhea, loss of sleep and strength are its symptoms—piles, appendicitis, and fistula, are caused by Constipation. Its consequences are known to all physicians, but few sufferers realize their condition until it is too late. Women become confirmed invalids as a result of Constipation.

Q. Do physicians recognize this?
A. Yes. The first question your doctor
asks you is "Are you Constipated?" Tha

is the secret.

Q. Can it be cured? Q. Can it be cured?

A. Yes, with proper treatment. The common error is to resort to physics, such as pills, salts, mineral water, castor oil, injections, etc., every one of which is injurious. They weaken and increase the malady. You know this by your own experience.

malady. You know this by your own experience.

Q. What then should be done to cure it?

A. Get a bottle of Mull's Grape Tonic at once. Mull's Grape Tonic will positively cure Constipation and stomach trouble in the shortest space of time. No other remedy has before been known to cure Constipation positively and permanently.

Q. What is Mull's Grape Tonic?

A. It is a compound with 40 per cent of the julce of Concord Grapes. It exerts a peculiar strengthening, healing influence upon the intestines, so that they can do their work unaided. The process is gradual, but sure. It is not a physic. It is unlike anything else you have ever used, but it cures Constipation, Dysentery, Stomeoh and Bowel trouble. Having a rich, fruity grape flavor, it is pleasant to take. As a tonic it is unequalled, insuring the system against disease. It strengthens and As a tonic it is unequalled, insuring the system against disease. It strengthens and builds up waste tissue.

Q. Where can Mull's Grape Tonic be

The Best of Reasons.

From Life.

Mother—Willie, why do you quarre.
so much with that Jones boy? Willie-'Cause he's afraid to fight,

Chicago, Sept.—The Peruna Drug Manufacturing Company, manufac-turers of a widely known proprietary medicine, has brought suit in the Superior Court of the city of Chicago against the Curtis Publishing Company of Philadelphia, alleging that it been damaged to the extent of \$250,000 by a recent article in the Ladies' Home Journal.

The suit is based on a statement recently made in that journal that a tes-timonial as to the merit of the remedy manufactured by the plaintiff, alleged to have been given by Congressman George H. White of South Carolina was fraudulent, denial from Mr. White that he ever gave such a testimonial

also being printed. The Peruna Company declares that Congressman White did give the testimonial in good faith, that it has two original letters from Mr. White. It declares that Mr. White was led to repudiate the testimonial through a

misunderstanding. This is the second large damage suit that has been filed against the Curtis Publishing Company since it inaugurated its attacks on "patent meditines."

Fairly Rolled in It.
From the Cleveland Leader.
"Our office boy dropped into poetry yes-

"How was that?" "The literary editor kicked him into the

There are no small buildings on the farm that cannot be amply ventilated by the simple plan here described. Generally such buildings are of the single or sloping roof sort so that the plan can be carried out at small expense. In the rear of the house, near one corner build an air shaft, made by joining at edges four boards about eight inches wide. Set this into the ground or fasten to the floor if of boards so that it will be firm. Have it open at the wall of the building and about a foot up from the floor cut out a piece so as to have an opening the width of the board and about six inches the other way. and about six inches the other way and in the side of the building opposite this hole in the shaft cut a hole of corresponding size. Cover these two holes as well as the

hole in the shaft with wire netting so that no bird or small animal can get in.
This is the shaft by which the air enters
the building. Then build another shaft
long enough to reach from about eight of this shaft must be opened so that the opening will be protected from rain. The lower end is to be covered with wire netting. Fasten this firmly at the roof end and with corner supports to the floor at the bottom. The plan is simple, easy to construct and works splendidly. It is particularly good for ventilating poultry houses. In the plain illustration A repre-sents the shaft through which the foul air passes and B the shaft through which the

FEEDING WARM MASHES.

Now that the season is approaching when the poltry must be houser more or of the warm mash in the morning; then we turned to the plan of giving it at night and liberally in either period. Now we stand on a middle ground for with our flocks mainly of the larger breeds, it was found that the liberal feeds of warm mash put the fat on and when the fat gets on too heavily the eggs begin to fall short. We then worked along the plan of feed-ing the mash in the morning during mod-erate weather and at night in colder weather, but the quantity is far more lib-eral; indeed, the fowls are not a little hungry when they have finished, but, on the other hand, they don't stand around with a dreamy look in their eyes which comes from a full stomach, but get to work vigorously to scratch out the grain in the chaff on the scratching shed floor. To make up for our stinginess in quantity of mash we make it appetizing by using a little wheat in the bran as well as bits of meat and vegetables chopped fine. Experience through two seasons of fine. Experience through two seasons of the way to the surface of the ground. feeding in this manner has convinced us. Then, the tree must be staked if there is the correct Don't go to the other extreme and cut the mash out lastly a mound of earth should be heaped entirely until this suggestion has been up around the base of the tree both as pro-WHAT ARE FIRST GRADE APPLES

Several inquiries have been received asking for additional information along the lines of our suggestions on the assorting and packing of high-grade fruit, one point being to decide as to what constitutes high grade or first class fruit. One authority claims that the first grade of apples should never be less than a stated diameter; this is not a safe rule for some varieties are much smaller than others while with some other sorts the size would be all required while the specimen might be de- on the inside. If the frame will not percidedly faulty in other respects. A safe guide would be to select the largest specimens that are nearly uniform as to size, but a triffe smaller these should be packed separately, yet sold as first class window and the cost is not great. In fruit. Next to perfect specimens some cases a double window of glass will fruit. Next to perfect specimens some cases a double window of glass will it is important that the fruit be as answer the purpose and be more ornanearly uniform in size as possible, for inmental, but in cold locations a curtain of variably the smaller specimens will reduce the price obtained for the lot. This nights. In addition to fixing the windows holds good with all fruits and vegetables. We have seen specimens which were really third grade as to size sold readily as the boards. Have some corner of the barn seconds because they were free from blemish, bringing a price more than larger specimens less perfect would have brought. It follows, of course, that when the demand is great and the supply small the prices will rule high but even then, if there are first class buyers among your customers, it will pay to grade closely. TRY THE HOME MARKET.

A grower of good fruit, vegetables and poultry ought not to have much trouble in working up an excellent trade in his nearest large town if he will take some trouble in assorting his products, packing them attractively and offering only the best sorts. Yes, this is the old story we have told before but it needs repetition frequently. All of us have seen growers who would go to considerable trouble to prepare their products for the commission man in the city, yet be positively hasty in the way they prepared the stuff for the home market. They will be careful in home market. assorting for the commission man because they know the goods will be examined before they are paid for, but they will work off all the poor stuff in the middle of the basket for the home market trusting to luck not to get caught. This is dishonesty, of course, but it takes type to make things stand out in their true light. Many of the men who do this thing do not really mean to be dishonest for I have heard many of them grumble because they could not work up a good home trade, seemingly oblivious to their faults. Just as surely as a good home trade can be worked up by first class products properly and attractively presented, it is also just as certain that failure will result if one works along the other line indicated.

BALANCED RATIONS FOR SWINE While our hogs get plenty of corn we go o considerable effort to furnish them

SIMPLE PLAN OF VENTILATION | weight and in the finest condition. These grains are mixed thoroughly and then skim milk is used so that the mass is about like thin porridge. This our hogs get twice daily with corn on the cob for the third meal and something in the way of root crops or good kitchen slop in which is mixed vegetable and fruit parings for the in-between meal. This is the food during the summer (except that the corn is cut out) as well as during the winter. The range takes the place of the third meal of

> If it is thought necessary to apply mulch around the base of trees or shrubs as a winter protection care must be used, not to do the work too soon, particularly if anything in the nature of a fertilizer is needed such as coarse stable manure, for there is always danger of inciting renewed growth in the tree just as it is beginning to go to sleep for the winter and this growth, being extremely tender, will with much injury to the tree. A better plan is not to apply the mulch until the ground freezes, applying more, if neces-sary, later on. By far the best plan of all is to use earth with which to protect the roots of the tree or shrub during the first cold days; put it on several inches thick for three or four feet around the tree. Later, if it gets too cold, a little coarse manure may be put on over the soil. By this plan the tree or shrub will have full protection without danger of inciting a

WINTER PROTECTION FOR VINES Many who have climbing vines around the house have set varieties that ought not to have been planted. The climate the roof a foot or fifteen inches. The top the roof a foot or fifteen inches. The top the roof a foot or fifteen inches. The top with success. The best plan is to have vines that are entirely hardy in your climbs. The honeysuckles, the American The honeysuckles, the honeysuc Ivy and most of the heavily wooded sorts are hardy or so nearly so that they need only a mound of earth around the base to carry them through severe winters. The Clematis family are readily protected as the tops usually die back so that only care is needed of the roots which is readily given by the mound of earth and over this some coarse half-rotted manure free from straw. In some sections it is custom to wrap tender vines and shrubs in straw. There is no decided objection to this if the top is left open so that a circulation of air will pass over the shrub and if one is sure no mice will get in near less closely the annual subject of feeding culation of air will pass over the shrub the warm mash comes up for considera and if one is sure no mice will get in near tion. We were formerly strong advocates the bottom to gnaw the tender shoots. The plan of laying over the partially tender vine and covering it with soil is also adopted in some sections, but a vine so tender as to require this treatment ought not to be planted.

FALL PLANTING OF TREES, ETC. In very cold climates the fall planting of trees is not feasible, but there is no reason why the trees cannot be bought and "heeled" in so as to be ready for early spring planting. In the more moderate sections there is everything in favor of fall planting; the soil is in good condi-tion for the trees, the work may be done with more comfort, and one is apt to get better trees because the nurseryman is not neither are you. On the other hand quite a little more care is necessary in fall planting. The roots must be pruned so that all bruised or broken pieces are removed, the soil must be well worked in around the roots and firmed down well all is likely to be high winter winds and tection against frost and to help the tree withstand the wind. With these things withstand the wind. With these things done the majority of the trees will Mye and thrive. The same thing applies to flowering shrubs, most of which can be planted in the fall to better advantage

DOUBLE WINDOWS IN THE BARN Except in the warm south we believe that the windows of every barn should be fitted with an extra covering of wood. In other words a shutter of wood hinged on the outside and swinging in to be hooked mit of this have it anyway and use a button on the outside. One scarcely realizes how much warmer the barn will be for the cows and horses with this double as described go over the barn well and stuff newspapers between the cracks of where a window of a size according to the number of animals in the barn can be placed which will be open most of the time to give as nearly perfect ventilation as possible or have some plan like that illustrated this week which is as applic-able to the large building as the small one.

A CHEAP HOG HOUSE DOOR. There is no good reason why the door to the hog house should be made of heavy boards and kept shut nor why the hous should be without any door if one will work out this simple plan. Take some strong burlap or an old fertilizer bag and get a few laths. Place the laths an inch apart on both sides of the bag (crosswise) and fasten them to each other, nailing through the bag. Hem the edges of the bag so they will not ravel then fasten over the opening in the door letting it

weight it sufficiently to hold it in place so that it will keep out cold and storm, yet it will be sufficiently light so that the hogs will be sufficiently light so that the hogs to considerable effort to furnish them variety in the rations and try to give it to them in such a way that it forms a balanced ration. We are believers in considerable soft food for swine and considerable soft food for swine and consideration of wheat middlings and gluten meal with a small portion of process oil if desired the regulation board door may meal a feed that will keep them in good will be sufficiently light so that the hogs and the hogs will be sufficiently light so that the hogs and push it with their heads when they want to get in or out of the house. The illustration shows the plan plainly and it will work better than any door we know of, obviating the trouble of opening the door every time the hogs are to get in or out of the house. The illustration shows the plan plainly and it will work better than any door we know of, obviating the trouble of opening the door every time the hogs are to get in or out of the house. The illustration shows the plan plainly and it will work better than any door we know of, obviating the trouble of opening the door every time the hogs are to get in or out of the house. The illustration shows the plan plainly and it will work better than any door we know of, obviating the trouble of opening the door every time the hogs are to be let out.

## AWFUL NEURALGIA

Mr. Porter Thought He Should Go Mad But Dr. Williams' Pink Pills Cured Him.

"It seems like a miracle that Dr. Williams' Pink Pills should have cured my nenralgia," said Mr. Porter. "They are certainly a marvelous medicine and I am always glad to recommend them.

"For two years," he continued, "I had suffered almost unendurable pains in my head. They would start over my eyes and shoot upward most frequently, but they often spread over my face, and at times every part of my head and face would be full of agony. Sometimes the pains were so intense that I actually feared they would drive me mad.

"My eyes ached constantly and there was always a burning sensation over my forehead, but the other pains varied, sometimes they were acute, and again they were dull and lingering. I could not sleep. My temper was irritable and I got no pleasure out of life.

"I tried remedy after remedy, but finding no help in any of them, I became a despairing man. Even when I began to take Dr. Williams' Pink Pills I had no great hope of a cure.

"That was in December of 1903. my surprise, a change in my condition took place right away. The pains grew less intense and the acute attacks were further apart, as I kept on using Dr. Williams' Pink Pills. The improvement began with the first box, and when I had used six boxes I stopped. My cure was complete and has lasted ever since.

Mr. Charles H. Porter lives at Raymond, N. H. He is one of many grateful people who have found that Dr. Williams' Pink Pills will cure diseases of the nerves that have stubbornly resisted every other remedy tried. Not only neuralgia, but sciatica, partial paralysis and locomotor ataxia yield to them. They are sold by all druggists, or may be obtained directly from the Dr Williams Medicine Co., Schenectady, N. Y.

SCREAMED AT NIGHT.

Baby Scratched Until Face Was Raw and Bleeding-Eczema Cured by Cuti-

"For over two years my little baby girl suffered with a raw, itching and painful eczema on her head and face, the pain causing her to scream day and night, and my wife could get no rest. We tried several doctors, but without success. Unless we kept her hands tied she would scratch until her face was like raw beef. One cake of Cuticura Soap and two boxes of Cuticura Ointment completely cured her, her ing her face without mark or blemish. (Signed) W. J. Morgan, Orchard Town, New Lambton, New South Wales, Australia."

Recommends More Marriages.
From the Kansas City Star.
The race suicide question has evidence that marriages in Massachusbeen officially taken up in Massachus-sets by Charles Felton Pidgin, who is in charge of the state census now in in charge of the state census now in progress. He is going to tramp on the trail of the man with the small family and discover a few things, which Mr. Pidgin believes will help the state. Mr. Pidgin has an idea that the fact that the population does not increase is to be blamed more upon men who refuse to wed than upon small families. A list of questions has been prepared for the women of the state to determine whether or not the same birth rate exists among married women of the state as among the maren of the state as among the mar-ried women of other states. If the rates are equal, Mr. Pidgin says it is evidence that marriages in Massachus-sets are later or fewer than in other states. If it is evident after the re-turns are all in that the married folk turns are all in that the married folk of the state are doing their duty by the commonwealth then it will be the duty of the lawmakers to devise some plan may be lured or coerced into matri-

Advancing the Farmers' Interests. Traveling agents and salesmen are now sent from the home offices of the Chicago packers into all South American and Asiatic countries. They are going into every land, no matter what language may be spoken or what money be used. They will exchange their goods for cowries or elephant tusks-anything to sell the product and get something in return convertible into money. It may seem odd to some folks, but traveling men, carrying cases with samples of American meat products, can be seen in the desert of Sahara, the sands of Zanzibar or in Brazil, "where the nuts come from." Great is the enterprise of the Yankee merchant. The greater the market, the greater the price and stability of the price of the product and all that goes to make it in its various stages.

The Richest Heiress a Florist.

From the Chicago Chronicle, Fraulein Bertha Krupp has become lately interested in horticulture. For more than a year she attended to the beautiful little florentine garden her late father laid out for her, but until recently she had shown no particular interest in gardening; now she is an araent florist. She has had an orchid house built. Some of the rarest growths have been sent from English growths have been sent from English growers as well as from South Amer-ica. Some of her orchids, by their beauty, awakened the enthusiasm of this reserved girl about whom so little is known, who leads a strange, retired life within the walls of the Villa Hugel

near Essen. Fraulein Bertha is of the opinion that ornamental gardening is a calling for which women are especially fitted and, aided by her mother, is taking steps to start a school at Essen where selected girls shall be trained for it.

Hardly a rumor reaches the outside world from the Villa Hugel and serv-ants who talk are peremptorily disants who talk are peremptorily dis-charged. Frau Krupp and his daugh-ter visit the seaside or go to Florence or the Italian lakes and no one knows in Essen what their movements have been. Deep, impenetrable shadows seem to rest over the Villa Hugel. There is no longer any talk of Frau-lein Bertha's marriage and the general opinion is that the young Cologne banker to whom it was believed she was engaged has been dimissed.
