At Last--A One-Adjustment Cream Separator

BEFORE you buy any cream separator, come in and look at the Primrose. But one adjustment is needed to keep it in perfect operating condition. This adjustment is a simple one for keeping the bowl at the correct height—an adjustment that you or your wife can safely make.

The adjustment is made from the outside of the separator by either raising or lowering the bearing containing the hardened steel point, upon which the spindle revolves. A slight turn with a screwdriver, perhaps once a year, does the work.

The Primrose is a well-constructed, close-skimming, durable cream separator, one it will pay you well to buy. When can you arrange to see it?
