The longest continuous stretch of submarine cable now working, that is, without relay, is 3.458 nautical miles— that from Vancouver to Fanning island in the Pacific, and the average distance without relay is much less than this. It is evident, therefore, that on the long transoceanic cables such as those across the Pacific, islands must be found for relay stations. This explains the rivalry of certain of the European nations for the possession of small, sol-Itary islets, scarcely more than mere rocks, and useless except for just such a purpose as this. This was the reason for Germany's acquisition of the Caroline and Marianne islands and later of one of the Samoa group, at the time of our war with Spain. Similarly Eng-land is to be found in possession of conveniently placed islands all over the

The completion a short time ago of a chimney, 571 feet high, at Tacoma, Wash., transfers the title of the world's tallest chimney from Japan to America. The structure, which in respect to height held the world's record until recently, was the 570-foot chimney at Sagonoseki, Japan. While the giant flue is of reinforced concrete, the one surpassing it by so narrow a margin is of brick. The big Tacoma vent, like its rival in the Orient, is part of a smelting plant, and the reason for rearing it to such great height is to prevent the fumes discharged by it from harming vegetation, particularly in a park close at hand.

The Australian government has de-cided to follow the example of the Brit-ish war museum authorities and obtain protographs of the men who have given their lives in the war, and of others who have won awards and decorations. In order to avoid dupli-cation of the effort, W. E. Mate, vice president of the Amateur Photographic Society of Victoria, who has undertaken on behalf of the British war museum to collect the photographs, will do the same for the Australian war museum now being established.

Experiments were made with air-planes in the 19th century. Santosplanes in the 19th century. Santos-Dumont achieved success with an avi-ator on October 23, 1906, winning a prize of \$10,000 for the first aerial ap-pliance which, without support by gas, should make a circle in the dir of at least one kilometer. Since then the airplane has been perfected. Most suc-cessful in this field have been Orville and Wilbur Wright, of Dayton, Ohlo, who fairly solved the problem of avia-tion. The airplane has since been made more effective.

A whirlpool bath is the novel treat-ment applied at a hospital in Manchaster, England, for cases of rheumatism, heart disease, shell shock and debility following typhoid and dysentery. The tank, large enough for 12 men, con-tains four feet of water and is provided with seats on which the bathers are im-mersed to their necks. The tempera-ture is kept at 93 degrees Fahrenheit, just below that of the body. The room is quiet and dimly lighted, and after an hour in the bath the men go to rest

ANOTHER STEP IN POTASH LEASE CASE

Lincaln, Nob., June 8.—The state board of educational lands and funds got a knockout blow from the Lan-caster county district court in the case where T. L. Briggs of Sheridan county enjoined the board from issuing any mineral leases to the potash lakes on school land he has under lease from the state. The big fight really was whether the company of which State Fire Warden Ridgell is president should get, without competition, the

lease on these lakes, Briggs having made a higher bid.

The district court holds that Briggs only is entitled to the mineral lease and enjoins the board from issuing one to any other person until after the agricultural lease that Briggs holds has expired in 1927. The court finds that Briggs is raising hay and live stock on the land, that the lakes furnished. ish water for his stock and sub-irriga-tion for his hay land; that without the lakes he could not feed stock or raise hay, and that he is in right pos-session of the land.

CAN'T KEEP UP RAIDS, NAVY EXPERT STATES

By Associated Press.
London, Wednesday, June 5.—The
German U-boat campaign off the Atlantic coast of the United States can-

not be kept up for any length of time in the opinion of Archibald Hurd, the naval writer, expressed in a statement issued tonight. Mr. Hurd believes the operations were undertaken in the hope of weakening the work of the Amera-can navy in European waters and of in-timidating the American people.

"There is no possibility of the enemy maintaining a long continued campaign off the shores of the United States, which would require a large number of U-boats," Mr. Hurd said. "The Diesel U-boats," Mr. Hurd said. "The Diesel engine gives a greatly increased radius of action to big submarines, but New York is easily 3,500 miles from the nearest German base and the return journey means a matter of 7,000 miles apart from the mileage involved in chasing merchantmen; so there is no reason to anticipate any such developments as have been seen in British ments as have been seen in British waters and in the Mediterranean. The U-boats crossing the Atlantic must pass through the danger areas of patrols, aircraft and mines.
