FORD
advances into 1937 with the
LOWEST PRICE IN YEARS
and new operating economy

THE ADDITION of a new 60-horsepower engine to the Ford line for 1937 brings you a new, low price and gives you a choice of two V-type 8-cylinder engines. 85 horsepower for maximum performance. 60 horsepower for maximum economy.
The 60-horsepower V-8 engine was originally developed for use in England and France, where fuel costs are high. It has been proven there for two years with brilliant success. Now, brought to America, it

creates an entirely new standard of modern motoring economy!
The "60" engine, available in five body types, is built in exactly the same body size and wheelbase — to the same advanced design — with the same comfort and convenience as the "85." And it delivers V-8 smoothness at speeds up to 70 miles an hour.
Two engine sizes—but only one car and one purpose—to give you more miles and more satisfaction for your money in 1937.

BODY—All steel. Top, sides, floor and frame welded into a single steel unit. Safety Glass throughout at no extra charge.
COMFORT AND QUIET—A big, roomy car. Center-Poise comfort increased by smoother spring-action with new pressure lubrication. New methods of mounting body and engine make a quieter car.
