

gold miners of the world. The Treasury is paying somewhere between is worth. Washington is practically the only buyer of gold in the world at the moment, leaving out the gold actually used in certain industries. The answer is simple. We are getting all the gold mined in the world because we are willing to pay more for it than any one else thinks it is worth.

The British empire is the chief beneficiary, as it produces about 55 per cent of the world's total. Soviet Russia has risen to second place, about 28 per cent. There is nothing picayunish about this subsidy. The United States Treasury is buying right now at the rate of almost \$1,400,000,000 a year.

To make it worse, the government is highly embarrassed by this flood of gold. It is so explosive from the inflationary standpoint that the Treasury has been "sterilizing" it. To do that the government must seil short term obligations, on which it must pay interest, to get the dollars to buy the gold it wants to "sterilize." These short term obligations in themselves tend toward inflation, but they also tend to boost interest rates, and in turn to depress government bond prices.

Both these lead in a vicious circle towards higher interest rates for other money the government must borrow. As the government is now running on a basis which indicates a \$3,000,000,000 deficit this year, this situation also is far from picayunish.

Depression of bond prices is a dangerous signal to all banks, so the problem is what to do about it.

Would Mean Big Loss

One suggestion, which has raised cain in the world's money marts during the last month, is for the United States to reduce the price of gold to \$32 or even \$30 an ounce. Secretary of the Treasury Henry Morgenthau Jr., opposes this because of the loss the Treasury would then take- amounting to more than one and two-thirds billion dollars. It is not likely to be accepted.

Another proposal is for the government simply to stop buying gild. Objection is made that this would throw the rest of the world into a state of financial jitters. It would certainly stop a lot of foreign buying of commodities from this country. It is the dollars obtained by selling gold to the Treasury that finances these experts in considerable part.

That solution would seem to fit in, however, with President Roosevelt's views about prices, which in many instances have soared because of foreign buying. In fact, it is a solution which is being urged very strongly, especially as it would involve no paper loss to the Treasury.

But it might, say its critics, prove far too drastic a curb on the boom which had been pushing prices up too rapidly. This remedy might be worse than the disease. Much worse. It might even be better to continue paying a subsidy of from \$150,000,-000 to \$200,000,000 a year to the gold miners than to risk it.

There is some talk also of a free gold market once more-letting it really find its own level. Critics of that say they are not sure what would happen if the only big buyer of the world suddenly stepped out of the picture. Some even suggest no other government would care to buy gold-that it might drop to its commercial value, with Uncle Sam holding the bag-just as he did on silver.

The chief difference between gold and silver in this subsidy business, aside from the volume, is that the Treasury is paying its subsidy only to silver miners inside the United States. It is paying most of its gold subsidy to foreigners.

Big Disappointment

Perhaps the biggest disappointment opponents of President Roosevelt on the Supreme court enlargement plan have had was the special congressional election in Texas. where Lyndon B. Johnson, the candidate one hundred per cent for the President, was decisively vic-

It was so disappointing because it was the action of the Texas legislature, coming so swiftly after the first announcement of the court program, which so heartened the senators and members of the house who were against "tampering" with

the court. In fact, during the few days that intervened between the first announcement and the heavy majority cast in both branches of the Texas legislature disapproving the President's plan, there was no hope in Washington on the part of critics

that they could beat it. But then folks began recalling the League of Nations fight, which started out with only two open treaty "killers" and wound up in complete victory for opponents of the league. They began hoping that the country would manifest its opposition in the same way-that every special election would show that the people

were against the President. Outside of the special election for

the United States are subsidizing the | however, there have been few signs pointing in that direction. There seems to be no doubt that a very \$2 and \$5 an ounce more for gold large number of persons are opthan the rest of the world thinks it | posed to the President, including not only those who opposed him in the last election, but many who warmly supported the New Deal in that fight. But there is nothing to prove that this number of opponents is formidable enough to force the switching over of senators now intending to vote for the President's

Timid Senators

It is necessary to bear in mind, in appraising the importance of these signs from the country, that there are enough senators opposed to the court enlargement plan to defeat it by a wide margin if they dared vote their private sentiments.

One senator from a Middle Western state went to one of the leading opponents, who happens to be a very forceful orator, and urged that orator to make a few speeches in the Middle Western senator's state.

"If you would just make that speech you just made in half a dozen cities in my state," said the Middle Westerner, "I think I would be able to vote with you on the final roll call. I think you could convince enough of my constituents that there is real danger of a future dictatorship in this country involved in this court packing plan to make it safe for me to go along with you. The point is that now I am afraid not to go along with the President."

Most of the senators sitting on the fence of course are not so frank about it. But there are very few sitting on the fence who would not like to be sure that they could vote against the President without risking their political futures.

Unfortunately for the President's opponents, however, the breaks do not seem to be going that way. fragrant with bananas. Which makes the chances of the President getting his way-unless retirements should smooth the way to a compromise-considerably better than before that Texas special election.

Justices to Retire

Supreme court "grapevines" are leaders are highly encouraged about. It is that at a recent conference of the nine justices, two stilted English. announced to their colleagues that at the conclusion of the present term-early in June-they would re-

Further, the "grapevine" reports that the two were from the following three names: Justices Louis D. Brandeis, Willis Van Devanter and George Sutherland.

The first of these is beyond question the most liberal member of the court, has approved more of the New Deal's progressive pieces of legislation than any other. In fact, the only two Roosevelt moves he voted to disapprove were N. R. A. and the removal of a federal trade commissioner--William E. Humph-

The other two, Van Devanter and Sutherland, have almost invariably voted with the conservative side when the division was anything like close. They are exceeded in their conservatism only by Justice James Clark McReynolds.

So that retirement of either of them would swing the court to the liberal side on all questions which have been decided against the administration by five to four de-

The removal by retirement of both would swing the court to the administration side on all decisions which have been against the proposed laws by six to three decisions.

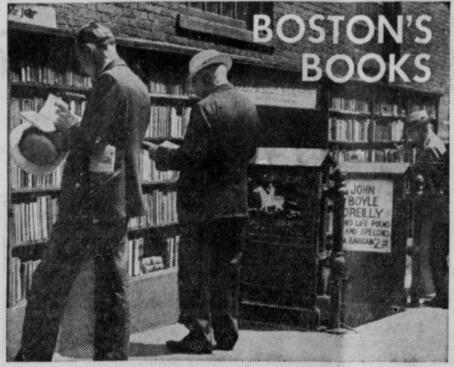

Hand-Picked Successor

The point here is that whether Justice Brandeis should retire or not makes no difference in such calculations. He practically always votes liberal anyhow. If he retired he would be replaced by a handpicked justice whose whole record and statements of views would have been gone over with a fine tooth comb by New Dealers. So that the only changes that would really count would be replacements of justices listed now on the conservative side, or in the middle of the road class.

It is also a fact that the end of the present term of court will come -in all probability-before the senate can reach a vote on the Supreme court enlargement bill. Thus the retirements, providing they are the globe. Miraculously, almost, announced at that time as the "grapevine" indicates, would supply an excellent excuse for the President not to compel the senate to hold a roll call on the measure at

There is no authority for the statement that the President would accept these court changes in lieu of his proposed bill, but such leaders on Capito! Hill as heard about this "grapevine" express the view privately that Mr. Roosevelt would not insist on his bill if the natural course of events provides this opportunity to change the economic complexion of the court without forcing through a measure which is so disrupting to his own party lines.

Browsing Among Books an Outdoor Sport in Boston.

Prepared by National Geographic Society, TUDY Boston from the high tower of the customhouse. It looks down on that cobweb maze of narrow, crooked streets which marks the "city limits" of bygone days, when cows grazed on the Common and clipper ships traded with China and Bom-

In the shadow of modern structures squat many old-style shops "countinghouses," already weather-beaten when John Hancock was governor. To Boston these are more than obsolete architecture: they are symbols of her busy, audacious youth when she built and sailed our first merchant fleet.

Modern Boston sprawls over more than 1,000 square miles and counts some 2,300,000 people in her metropolitan district. Much of that is in the pattern of other American cities. But the old Boston, so like parts of ancient London, is unique in the United States.

Come down from the tower now and see how certain of these streets are devoted to a particular enterprise. This one smells of hides and leather; along that one you see only the gilded signs of shoe manufactuturers. One section smells of fish, another of wool, and here is a wharf

Turn up the hill toward the venerable Transcript, with its columns of genealogy, and you smell newsprint, fresh ink, roasting coffee, and second-hand books stacked in the open air-any book from Gray's "Elegy" to "Anthony Adverse."

Even the odd wording of signnotoriously unreliable, but here is boards harks back to earlier days. one that some of the administration "Victualers License," "Spa," "Protection Department," not fire department, and street-car signs in quaint,

Old trades cling to old places. The Old Oyster House, live lobsters wriggling in its window tanks, stands just as it was a hundred years ago.

Aged Carver of Pipes.

Before a window at 30 Court street crowds watch a wrinkled artist carve pipes. At eighty-seven, wearing no glasses, he works as skillfully as when he began, seventy years ago. Monk, Viking, and Indian heads, skulls, lions, dogs-he makes them all.

Give him your picture and he will cut its likeness on a meerschaum bowl. For a Kentucky horseman he carved the image of that rider's favorite mount; he even carved the "Battle of Bunker Hill" with 50 brier figures on one big

Five workmen in pipe stores hereabouts have a total service of more than 200 years. "A man is on trial until he has been here 25 years" is a favorite joke in one shop.

Quietly another old sculptor works, making "ancient" idols, rellics of the Stone Age, even a "petrified man" for a circus in Australia!

Turn back and walk through the cathedral-like First National bank and look at its compelling murals. with their dramatic themes of merchant adventures by land and sea or study the fascinating exhibit of historic ships' models in the State Street Trust company.

Then talk with men whose families for generations have helped shape Boston's destiny, and you begin to sense what significant events, affecting all America, are packed

in her 300 years of history. Boston cash and engineering skill built several of the great railway systems of America. Chicago stockyards, to a large degree, were built by men from Boston. She founded the great copper-mining industry in our West; she was the early home of many corporations, famous now in the annals of finance, foreign trade, construction, and manufac-

It was Boston brains and money that started the great telegraph and telephone systems that now girdle she turned the jungles of Central America and the Caribbean isles into vast banana plantations, and built up the greatest fruit industry the world knows.

Bostonians Pioneered West.

From Boston went groups of thrifty, energetic men to share in the conquest of the West. To Kansas, especially, many colonists were sent by the Massachusetts Enrigrant Aid company to circumvent the rise of another slave state under the Kan-

sas-Nebraska act. Lawrence, Kansas, is named for an old Boston family, and many a budding Midwest factory town drew its first artisans from that national training school for skilled mechanics which is New England.

Descendants of these pioneers form part of the army of 2,000,000 visitors, more or less, who flock back to Boston each season and swarm out to the historic towns about it. They want to see the old places where their ancestors lived, and spots famous in the annals of early days: Bunker Hill monument: Faneuil hall; the site of the Boston Tea Party; Old North church; Paul Revere's house; the tomb of Mother Goose; the site of the Boston Massacre; the sacred codfish in the Statehouse; and near-by Plymouth Rock, Concord, and Lexington, and the Witch House at Salem.

Today Boston prints more books than when she was pre-eminently a 'literary center.' Manuscripts pour in to her editors. Novels, carloads of dictionaries, and schoolbooks in Spanish and English, Sanskrit and Eskimo, are shipped from here, often to markets as remote as Bagh-

Her Golden Age of letters, when Emerson, Hawthorne, Longfellow, Whittier, Holmes and Lowell used to frequent the Old Corner Book Store, passed with the rise of New York as a market for manuscripts. But curious visitors still seek out Emerson's old home at Concord; they prowl through the country house of Louisa M. Alcott-admission 25 cents-and drop a tear for "Little Women." For another 25 cents they see the "House of Seven" Gables" at Salem.

In American letters Dana's "Two Years Before the Mast," Melville's "Moby Dick" or "Typee," and the brilliant historical work of Prescott, Parkman, Fiske, and Bancroft must long endure, as will other names, from Edward Everett Hale, author of "The Man Without a Country, and Julia Ward Howe, who wrote "The Battle Hymn of the Republic." to Thoreau and John Boyle O'Reilly.

From Boston still come important magazines for both adults and youths. But it is the stupendous output of textbooks which astonishes.

You can imagine the volume when you stop to think that between 25 alone are enrolled in schools; that books when schools open each September, and that Boston is one of the chief textbook-producing centers in the world.

World Center for Textbooks.

"There are many schoolbooks," said an official of a publishing company, "whose sales make that of a popular novel look diminutive. They are handled not in dozens of boxes, but in carloads of 40,000 pounds each.

"While some of our novels, 'Uncle Tom's Cabin' and 'Rebecca of Sunnybrook Farm,' for example, have sold more than half a million each, our little school pamphlets such as 'Evangeline' and 'The Courtship of Miles Standish' have sold at the rate of a million a year.

"The task of getting sufficient schoolbooks ready to meet the sudden demand every September, when orders come in at the last minute by wire, means that publishers usually begin printing these books as long as ten months ahead."

"Books made in Boston are sent everywhere that English is used in schools," said another publisher. "More than that; in translation, they go to scores of foreign lands. Recently orders came from Baghdad for thousands of our Craig's 'Pathways in Science.' Arabic translations of Breasted's 'Ancient Times' and a number of our other books are used in the schools of Iraq. Not long ago we granted the government of Iraq permission to translate Caldwell and Curtis' 'Introduction to Science' into Arabic.

"You know that the British Isles are a citadel of the classics. We feel gratified, therefore, that our series, 'Latin for Today' is now in wide use in Scotland and England. These volumes are the authorized books in New Zealand and at least one of the states of Australia, besides being much used in South Af-

"Latin America is today using carloads of Boston textbooks. They are Spanish readers, geographies, arithmetics, hygiene books, algebras, geometries, and others.

"In Ottawa I saw a wall map with tiny flags that marked the sites of Indian schools; many were up within the Arctic Circle. All these schools use our books. This summer we had to hurry one new book through for publication early in August so we might get it to these schools before ice closed navigation to the Far North."

"I Want My Man"

By MARTHA SAMPSON © McClure Newspaper Syndicate. WNU Service.

THE town gossip, known as "Old I Ironsides" because of her heavy steel braces, seated herself in the cane rocker in Mrs. Jones' kitchen. "Don't you just love the smell of newly-baked bread?" she asked exuberantly, her beady black eyes swimming richly and her heavy face beaming.

"Yes," replied the demure Mrs. Jones, lifting a pan of bread from the stove. "But I'm rather glad to see this is the last loaf."

"Yes, I suppose you are," sympathized the gossip. "Now you can sit down and rest a while and we'll chat a bit about things."

Little Mrs. Jones seated herself very gently on the edge of a kitchen chair while "Old Ironsides" rocked expectantly. Mrs. Jones turned her head undecidedly for a few moments, and then began: "I think it's a shame the way the girls carry on today. Why, you'd never believe how silly they are until you have one of your own. Take that Sadie of mine, now-why, from morning till night that child hasn't a sensible thing in her head. She gets up in the morning with just a few minutes to spare; she slips on a few flimsy rags and plasters on some paint and calls herself clothed. She drinks a cup of coffee and chews a bit of toast and calls herself fed; and then she rushes off to the train as fast as her spindle legs can take her. She goes into the office and types all day; but I doubt if she puts a moment's thought on her work; it's all on parties and dances. I don't see how she can give a respectable day's work to her boss. And the hussy tells me all the girls are the same." This was Mrs. Jones' usual tale of woe, and when she concluded it, she heaved a sigh of relief.

The buxom gossip leaned forward on her elbows. "It's a fact; that's all they do. I've been around to all the ladies of the neighborhood and they're all complainin'. Now take that daughter of yourn, what is she aimed for? It's a shore thing travel? she ain't following no career or studyin' for no profession. Her motto is that of the rest of the shop and office girls, 'I want my man.'

"Take that Ellie Brown from down the road away. She was one of those office girls, trottin' off to the city every day, runnin' out to dances and parties. She kept going pretty fast-too fast, according to some of the stories that were going around outlandish stories that I wouldn't have told of no kith nor kin of mine; and I'm glad I ain't got no chick or child in these wild times-but she managed to hook up with this Jimmy fellow, and let me tell you that this Jimmy boy is about the same type, travels fast and light-hearted.

"They're all up to it. It ain't like it use tuh be when we was young. and 30 million American children But the certain shame of it is that these wild girls get the men. Now they must have some 70,000,000 if for some reason they stopped getting the men, they'd tone down a bit: but with the men coming free and easy, everything's hunky-dory with them."

"Yes," sighed Mrs. Jones. "I suppose it's all true. I suppose that's all Sadie's aiming for; and she doesn't care about anything else. But I'm anxious as to whether or not she'll get a decent man-you hear so much about these heartbreaking sheiks now-a-days, and with the girls as frivolous as they are, goodness knows what's going to happen to them. They'd just as soon run off with any man that stares at them even though it's only a glass eye he's staring with."

"Indeed!" broke in "Old Ironsides," "I know of one young lady who saw a man in the subway she thought she'd like to know. Of course, she couldn't speak to him. But this young lady had a queer habit, unconscious, you know, of blinking her eyes, very catchingly, too; and, my land, that man followed her for some stations and then spoke to her and today he's married to her. Queer!-Queer world!" And the old gossip shook her heavy head.

"I'll admit there isn't much formality to the present generation. They point at things and babble at the top of their voices. I asked Sadie one day, 'Why do you talk so loud?' and she came right back in a voice that would startle a mule, 'Oh, ma, how am I gonna make myself heard in a wee, quiet voice when everybody else is screeching at the top of their voices?'

"I know several young fellows that I'd like to have interested in Sadie. But she doesn't take to the idea of me fixing it up for her. She says, 'Let me pick my own. Those of yourn are dead ones.' I do hope she does pick out a good man."

The conversation was interrupted by the slamming of the front door. There was a stirring of two pairs of feet, a whispered conference. Then a girl's voice broke out, "Oh, ma's a darling."

"Why," gasped Mrs. Jones, "that's Sadie. So early in the afternoon. Something must be up. Oh, I hope it's nothing serious."

The curtains between the kitchen and the living room was spread apart and Sadie's head appeared with tousled hair and rouged cheeks. "Oh, mom, I want you to meet Mr. Munton," throwing wide the curtain, "my husband. We were married this afternoon."
