Educational Notes

The next teachers' examination will be held in O'Neill on Saturday, July 10. The usual schedule of subjects will be followed. This is the last examination until November.

Free high school tuition applications should be made to this office not later than July 1. This is to insure the levy, made for that purpose by the county, being sufficient to cover the number of applicants who desire free high school tuition. The certificates of admission to high school will be mailed to applicants in August.

The examination to renew temporary teachers' certificates will be given in O'Neill on August 6, 1943. The examination will be comprised of two parts. Written tests will be administered in the morning by the county superintendent. A committee of three persons representing the state department will have charge of the oral examinations in the afternoon. These examinations are given in O'Neill for Holt county and several other counties in this part of the state. More details will be sent out from this office.

All temporary certificates are granted by the state department of public instruction. No legal permits can be granted by any county superintendent in the state. In order to be eligible for a temporary certificate an applicant must have previously held a qualifying certificate for the particular position they are now to be qualified for temporarily.

A temporary certificate must be applied for by a district, for it is meant to supply a school with a teacher, and not just a job for the teacher.

ELJA McCULLOUGH,
County Superintendent.

What You Buy With WAR BONDS

Prevents the "Bends"

Before our fighting pilots take to the air for stratosphere flying they must be "supe-up." To do this the pilot just before he takes off pedals a stationary motor driven bicycle to reduce the amount of nitro in his blood. Otherwise gas bubbles would collect in his blood stream.

The stationary bicycle is an inexpensive piece of equipment, but the vast quantities of this and other materials of war make it imperative for all of us to keep our fighting men well supplied by greater and greater purchases of War Bonds.

Hospital Notes

Mrs. Bud Seger and baby dismissed on Wednesday.
Mrs. Lyle Vquist and baby dismissed on Wednesday.
Mrs. John Steskal and baby dismissed on Wednesday.
Mrs. Clarence Young and baby dismissed on Friday.
The two Braddock boys of Page had their tonsils removed on Wednesday.
Ronnie Coventry had his tonsils removed on Monday.
Henry Bauman underwent a tonsilectomy on Tuesday.

THE RIDDLE

The master of the Oregon State Grange and the chairman of the National Grange Executive Committee have joined the national master of the Grange in strongly gram on the ground that it "discriminating the price subsidy directly contributes to inflation by further increasing the purchasing power of the high-income group—a purchasing power which already is in excess of the amount of consumer goods available."

The reason given for the subsidy is to help hold down prices, thereby retarding inflation. But people must pay any subsidy

through taxation, which in turn promotes inflation. The argument for a price subsidy does not ring true.

How can prices be stabilized unless the cost of production is stabilized? That is the riddle that has never yet been answered.

Miss Eva Salmons will leave Friday for San Francisco, Cal., where she will make her home. Her mother and family will join her later.

Pfc. and Mrs. Jerome Spittler, of Fort Knox, Ky., came Tuesday to visit relatives and friends.

HOME CANNING

The Answer to America's Greatest Food Problem

FOUR MAIN CANNING METHODS APPROVED FOR NEBRASKA

PRESSURE COOKER

The pressure cooker is the safest method of home canning. By using pressure, the higher temperatures can be attained. That's why the pressure cooker method should be used for vegetables and other non-acid foods. It is the only method which provides the 240° temperature required to kill botulinus. Your electric range is ideal for pressure cooker canning.

WATER BATH

This method is probably one of the most used methods but is suitable for fruits and tomatoes only. The jars are placed in a water bath container which is deep enough to permit boiling water to cover them. Be sure the jars are placed on a rack and not directly on the bottom of the container. Your electric range makes water bath canning easier.

OVEN OR ELECTRIC ROASTER

This method is suitable for fruits and tomatoes. Your oven or roaster must be thermostatically controlled, otherwise high temperatures may result in food boiling out or in breakage. The even, exact-controlled heat of your electric range makes oven canning simple and highly satisfactory for non-acid foods.

OPEN KETTLE

Safe for fruits and tomatoes only. Food is thoroughly precooked and packed in hot, sterile jars with hot, sterile rings and tops. This method is recommended only when other methods are not available. However, the economy and controlled heat of your electric range is highly beneficial in open kettle canning, as in other methods.

HOME canning is more than an economy measure this year... it's the patriotic duty of every American homemaker. Uncle Sam has set the goal for home canned foods at 5 billion jars for 1943. That's a big order and a big job for American housewives. But if you are one of the fortunate women who use an electric range, your canning will be much easier... no matter what method you use or what foods you can.

Use Your ELECTRIC RANGE for all Canning.
