

## Ripping Up Old Coat, Washing, Turning Makes Fine Garment for Small Child

By BLANCHE SPANN PEASE

The limelight is on cherries over direct heat until mixture thickens and boils, stirring constantly. Cook over boiling water 15 minutes, stirring occasionally. Add extract. Serve hot or cold over pudding.

### Not Fat—but Plump—and 40—

Dear Blanche:

I really enjoyed the holidays but now they are behind us and I'm always ready for a good rest and ready, too, to start taking off those extra pounds which were put on the waistline.

Blanche, don't you envy those people who say, "I can eat anything and never have to worry about it making me fat?"

I'm not one of those people as I'm fat and 40. Not fat, just plump, sounds better.

Now, I'm ready to start sewing. I always use the tails of my husband's dress shirts (which have the collars worn out) to make blouses for the little girls or short sleeve sport shirts for the small boys. The flannel shirts are also used in the same way. Have also used the wool plaid shirts and made jackets for the little boys. I use a contrasting color for the collar and if I'm short of the plaid, I also make the band at the bottom of the same plain color.

My sister ripped an old coat up, washed and pressed the material and turned it and is making a coat for her granddaughter. The material by turning it, shows no sign of wear. All the coat was new material for lining.

I want to can some beef next week. Of course, we use the locker but I like to have a few cans to open for unexpected company when you want to get a meal in a hurry, or it also is good to grind and make sandwiches.

Would sure like to see your new house, Blanche. I know you

are really enjoying the building of it.

### "A HOLT READER"

THIS ONE IS LICKING GOOD. It's orange date cake and a new one to try. Good and a bit on the different side:

One-half cup butter, 1 cup brown sugar, 2 eggs, well beaten, 2 cups cake flour, 1/2 teaspoon soda, 1 teaspoon baking powder, 1/4 teaspoon salt, 3/4 cup sour milk, 1 cup dates, 1 whole orange.

Cream butter and sugar thoroughly, add eggs. Sift dry ingredients together 3 times, add alternately with sour milk and ground dates and orange. Bake in buttered loaf pan in a moderate oven of 350 F. for 50 to 60 minutes.

Next time you make a veal round roast, squeeze a few drops of garlic juice into olive oil and baste occasionally with this for a different flavor.

### SANDHILL SAL

Last survivors of the Custer massacre keep turning up. And in our town there is a man who still has his "Landon" button.

Luck accompanies the man who doesn't count on it in his plan.

It is better to be honest whether you can afford to be or not!

### STUART NEWS

Mrs. Norris Coats took her daughter, Miss Lorraine, to Knoxville, Ia., Monday, January 21. Miss Coats has accepted a position as music teacher in the public schools at Knoxville for the second semester. Mrs. Coats returned Saturday.

"Out of thin air" comes the HIGHEST HORSEPOWER in Buick history

### NOTE FROM YOUR BUICK DEALER:

Presented here is the story of a great new engine development, as told by the men who did the job. We reprint the story here in its entirety—as we couldn't beat it if we tried.

No, we didn't have to build a new engine.

We took Buick's valve-in-head Fireball Engine—which makes the most of high compression. We drew on 12 patent years of Buick carburetion research.

And we came up with more might, more miles, from gas—right out of thin air, in more ways than one.

When you talk about "miles per gallon" you think of fuel, because that's what you buy.

But air's free—and for every gallon of gasoline, a busy engine can gulp more than 8,000 gallons of air.

The problem is to deliver air in the right proportions, throughout the full range of speeds at which you drive.

A carburetor—big enough to supply the air needed at full throttle—can be wasteful in stop-and-go driving. A carburetor sized for thrift in city traffic literally smothers your engine when you really give it the gun.

So Buick engineers developed the Airpower carburetor—a four-barrel automatic—and here's how it works.

Loading along, two barrels are working, two stay closed. And you get a low-speed

thrif and smoothness that's out of this world.

As you pick up speed, the "stand-bys" come into play—feeding not just more gas, but more air too—so you keep getting maximum power from each drop of fuel.

You have 170 effortless horsepower when you need it—a tremendous reserve ready to go into instant action at the nudge of your toe.

You have the satisfaction of knowing that you get this power with a frugal use of gas. At 40 you use less gas than you formerly used at 30.

\* \* \*

That's the story of Airpower carburetion in facts and figures straight from the factory. But statistics can't tell you the breath-taking joy of heading for new horizons in a great-powered new ROADMASTER.

When can you do that? Better come in soon. Lots of other folks are flocking into our showroom these days to see the greatest array of new Buicks we've had in years.

Equipment, accessories, trim and models are subject to change without notice.

Sure is true for '52
