Predicts Bill Will Not Be Approved

Sen. Carl T. Curtis (R-Nebr.) predicted that a bill, S. 5550, which proposes to authorize American participation in the organization for trade cooperation, will not be approved by the congress in its present form.

This proposal would make the United States a member nation along with 34 other countries under the general agreement on tariffs and trade. Hearings on this bill will be held in the coming session of Congress.

Senator Curtis pointed out that in order to participate in this organization, we would be denied an opportunity to market in foreign countries, agricultural commodities which are under price support programs.

"This, of course," said Curtis, "rebukes our agricultural program at a time when we are making every effort to market surplus commodities abroad." Other member nations in GATT would prefer that the United States trade in manufactured goods and let the "underdeveloped areas" trade on the world market in agricultural products.

Curtis pointed out that one important element in solving the farm problem is to provide for increased foreign consumption of farm surpluses.

"In recent years," said Curtis, "the United States has twice fed the free world during large-scale wars. We cannot place ourselves into a deficit position in food production merely because we are the world's leading manufacturing nation."
