TERMS FOR DAILY. THRMS FOR WHRELY.

WE acknowledge the receipt of the Allegany County Republican, published at Angelica Court House, N. Y. The number we receive is Vol. 68, No. 1. The paper was issued on Friday, January 6, 1888. It discusses the political questions of the day, and is very newsy in evand it shouts for Blaine.

ASIDE from the commercial travelers there is really no popular demand for the it. Business men are not asking it, and are satisfied with the present fares, and so are the people. What is wanted is legislation on freights, and all fair and possible reduction in them. - Des Moines (Iowa,) Register.

THE tide has changed and the bank cashiers are coming to the United States, this time it is the cashier of the Central Bank of Toronto. He has left the directors in a bad shape. It is a poor rule that won't work both ways, and if a few more cashiers will just step over to this side, the British government will be more ready to modify the extradition treaty.

A STATEMENT of the relative wagess paid in a woolen mill employing 221 hands in Providence. R. I., and a mill of the same kind and size in Bradford, Eng., shows over 100 per cent in favor of the American operatives. It is by such figures as these that the arguments of the free traders in this country are easily and conclasively refuted. When a workingman to that observed in the Hendon cows, is asked to favor a policy which is thus plainly seen to imply tess than half as much pay as he is now receiving. he can were differently affected. Sore patches only be expected to shake his head, and vote for protection every time. - Globe-Democrat.

THE free traders evidently believe that no duty was ever placed on coal until virus of the cows. The circle was thus the Republican party came into power. Nevertheless the truth is, as every one knows who is acquainted with the subject at all, there has been nearly all the time an impost on coal, since July 4th, 1789, when the first tariff act was passed. From 1824 to 1843 it was \$1.68 a ton, and during the war it ranged from \$1 to \$1.10 a ton, and since 1872 it has only been 75c. This reduction was made by the republicans, and all this howl about coal being \$2 a ton higher than it should be on a ;count of the tariff, is nonsense, as the tariff is only 75 cents.

The simple truth is that Mr. Cleveland's use of the offices has bound the results as before. Again, last January a monkey died at Wimbledon of scarlatina democratic party hand and foot. In no other administration since the foundation of the government have there been so many important appointments made. Microscopic examination of the internal In no other have there been half so many. It would probably be within human scarlatina, and in the blood the bounds to say that in no other administration have their been one-fourth as many important changes in appointive Dr. Klein may therefore claim to have offices as Mr. Cleveland has made. These discovered a hitherto unsuspected cause changes have been made, not only with of scarlatina, in the form of a little the purpose of fortifying the democratic noticed and less understood cow disease party against the return to power of the republican party, but also with the effect germ-it produces in man.-St. James of fortifying Mr. Cleveland against all Gazette. other possible democratic candidates in 1888. - Minneapolis Tribune.

THE free trade editors in the west are indulging in a great deal of balderdash is a very good imitation of it: Attach a over what they are pleased to call the thirty pound dumb bell to a thin line, tariff, says these editors, that causes the has been touched, wait a minute or two, high price of coal in the west. The duty possible until the dumb bell has reached on coal is about \$2 per ton and these the gunwale of the boat. At this stage editorial wiseacres would have the people of the proceedings drop dumb bell and believe that their coal would be just all into the water again, and repeat the that much cheaper per ton if the duty is process ad libitum. Be sure to get yourremoved. The foreign coal comes from wear malodorous, second hand oilskins, Nova Scotia. In no other part of Carada and have your hands blistered in as many is it found in paying quantities. This places as convenient. Meanwhile imagine coal must be shipped to Portland, Boston or New York, transferred from the barges to the railroad cars and then hauled the entire distance from the Atlantic seaboard. Will any sensible man believe that coal will be \$2 cheaper in Nebraska with the duty removed? Hardly .- Ga- streets reaches the stage of growth that eztte Journal.

THE SCARLET FEVER GERM. A Hitherto Unsuspected Source of Scarlatina-Dr. Klein's Investigations.

Several months ago Dr. Klein and Mr. W. H. Power, of the medical department of the government board, established the relation between a disease found on the udders of some cows at Hendon and scarlatina. The cow disease was not itself scarlatina, but by cultivation of the organisms obtained from cows the specific micrococcus of scar-latina was produced. Moreover, this cultivation was made in milk, and it was the milk of the affected cows that caused the scarlatina epidemic which gave rise to the inquiry. Then it was proved that the virus of the cow disease, if conveyed into the human body by the medium of milk, developed there into the germ of scarlatina; although between the cow disease itself and scarlatina there is

almost every possible difference.

This discovery suggested to Dr. Klein further question. He had shown that the cow disease could set up scarlatina in the human subject; he would now find out whether the scarlatina germ was capable of producing the cow disease. From ery way. Its heading is printed in red, a number of patients in the Fulham fever hospital Dr. Klein took minute quantities of blood. These were placed in tiny tubes and transferred to the surface of nutritive gelatine. In the result he obtained clear evidence that in some of his experitwo-cent fare. Farmers are not asking ments the blood contained organisms. In other cases no positive results whatever were obtained. But in four cases out of nine the specific organism was detected, and the organism so recovered from the blood of scarlatina patients was found to be exactly the same as has been cultivated from the virus taken from the teats of the Hendon cows. Dr. Klein does not hesitate to name this organism the micrococcus scarlatinæ, as having a special character and a definite mode of existence. The next question was whether, itself capable of being cultivated from the cow disease, it was capable of being transformed back into the virus of that

> With a subculture of micrococcus scarlatinæ, derived from scarlet fever in a human being, Dr. Klein inoculated two calves. The first was killed after ten days, and from blood taken from it a growth was derived identical with the micrococcus scarlatinæ. The second calf was killed after twenty days with the same results. In both animals an identical disease had been produced. Subsequently two calves were fed with milk mixed with the growth from several tubes of the same date and the same source as used for the other calves, and again the identical disease was produced, this disease bearing a great resemblance except that there was no affection of the skin. But three out of four calves-two of which were inoculated and two fedappeared, and the skin became scurfy, and on each nostril of one of them there was a patch of eruption, which decided the matter. From these skins eruptions were obtained "beautiful chains of cocci" coinciding with those developed from the completed.

A cow disease which is not scarlatina, nor anything like scarlatina, causes the animal to have sore teats. The exudations find their way into the milk pail, and there develop into something which infects human beings with scarlatina. From the scarlet fever patient a few drops of blood are taken, and after the disease germ has been cultivated it is passed into the system of a calf, which forthwith becomes attacked by the identical disease observed in the original cow. But this is not all, A case of suspected condensed milk was brought under Dr. Klein's notice. Scarlatina had broken out and could be traced to no other source. Sure enough, the micrococcus scarlatinæ was found in the milk, and experiments with it on animals yielded exactly the same contracted by drinking the milk of cows among which there prevailed a disease similar to that at the Hendon farm. organs of the monkey revealed the same changes as occur in these organs in scarlatina micrococcus was found. By means of this micrococcus the Hendon disease was again induced in animals. quite distinct from the dreaded malady which-after certain developments of its

Cod Fishing as a Sport.

A traveler on Cape Breton Island says that cod fishing is anything but an ex-hilarating sport. He thinks the following about 100 feet in length, and throw it "iniquitious" tariff on coal. It is this overboard. Pay out line until the bottom self thoroughly wet from the line, or that you are excited over something, and

Methods of Advertising.

Ingenuity is now expended in selection of places and startling lettering. As soon as a new building on one of the city requires it to be fenced in for the protection of passers by, the advertising locusts descend upon the owner and bid for the privilege of using the screen for adver-tising purposes. Vacant lots are filled the popularity that this medicine has, as out with big sign fences, and space is sold to advertisers and their signs painted on.

Death by Drowning.

The doctors differ in their opinion as to the time at which death comes in drowning. Some say in three minutes. Warrick offers low prices on Wa'l Pa- others in five, but none set a longer time Bailed hay for sale at Holmes livery dist case.—Youth's Companion. THE VIRTUES OF LAUGHTER.

Country Schoolboys Turned Loose-Laughing All Over-Shouting Happy.

Now go to a school horse in the country where the youngsters are let loose pell mell. Out they come with a rush, and every throat is doing its utmost to add to an uproar of sounds. Part of it is a bedlam of words, part a pure set of yelps like my dog. They run hither and thither, and stand on one leg. They turn handsprings, and do a dozen impulsive things that have no other purpose than to express happiness. I do not think it is any disgrace to the chaps so say it is an overflow of animal spirits, and in a way very much as my dog expresses himself.

I should be glad if my own condition could be more generally of the same sort. Only there is no denying that if boys be allowed to shout as they will they become shocking nuisances. Yes, young gents, you are a legitimate product of vitality, but one can't let you shout the top of his head off. On the whole, if they will let you loose, you will soon run quiet. Boys are a good deal like spouting geysersnoisy and quiet by turns. But if we had never outgrown this boy period, and could get on without philosophizing, and printing, and editing newspapers, and doing so many other exhausting things! Ah, yes-if. But we did not stop at the right point, but went on into what we call ripe years. There has been too much evolution. We should have been satisfied at the shouting happy point.

The object of language of all sorts seems to be to express satisfaction or dis-tress, joy or grief. Far back of primitive man, indeed at the very origin of life, there was some method of expressing satisfaction and dissatisfaction. When the head was established and vocalization achieved a great deal of language was left distributed all over the body. When a person is thoroughly happy the tongue is altogether insufficient to tell of it. Laughter is a remnant of the old sort of language, only we have a facial laughter that often supersedes a real all over laughter. But I know a few men who always laugh from top to toe. There is the shaking laugh, that is likened to

the quiver in a bowl of good, thick set jelly. When it begins it goes in ripples from side to side, and perpetual motion seems absolutely to have set in. And there is the roaring laughter that throws the practitioner into convulsions until he must hold his sides and gasp for breath. A really good laugher is a healthy man.

I have seen many a patient cured by a good story. I have in mind one who was in a despondent melancholy that had brooded over him for weeks. A cat had nestled by his side, and he involuntarily had stroked it. Pussy turned up her nose to touch his hand, when a flash of electricity leaped from it, and pussy was both shocked, confounded and insulted. Drawing back in great dignity, and with an appearance of vast intellectual amazement, she gave him two cuffs of a decided sort and stalked off. The man instantly broke into a laugh, and, as he expressed it. "couldn't stop." His whole system reacted from depression. He laughed till he was sore; and was cured. Of course there is liable to be a touch of the hysterical about such a break up; but it will do no harm. I recommend laughter as a preventive against disease, and as a cure for illness of both body and mind. Children should be encouraged to laughter. They should be taught to laugh loudly, strongly and all over. Laughing can become a matter of education as well as talking or singing. Have them stand up, with their hand on their hips, and begin. It is a capital exercise. You need only start the roar. It is catching. As soon as one urchin has exploded the rest will be at it. It will run up and down the line, and you will end by having all your pupils on their backs,

shouting happy.

So if you ask me what I consider most essential to health, vigor and longevity, I answer a plenty of laughter and a plenty of shouting. We should never check children from a reasonable amount of noise making, and never get beyond it ourselves. If possible have some place, a grove or, if no better, a barn, where you can shout as loudly as you please and blow out good full draughts of the purest air. We ought never to get beyond play. A good game of quoits, or tennis, has half its advantage in letting our lungs have full play. We can laugh as loudly as we please and shout with the young folks. Nearly all old age is folly, a useless drying up, owing to false notions of manhood and propriety. Mark this, my friend, don't outgrow the shouting happy point.-M. Maurice, M. D., in Globe-

The Food Question.

The subject of food has never yet received a common sense consideration. There is no doubt but a vast amount of wholesome food products are yet overlooked. During the grasshopper invasion it was proved by Professor Riley and some of our normal school teachers that such creatures may serve as an excellent article of food, yet the people preferred semi-starvation to even tasting them. Snails are luxuries in France. It was long before frogs found a market in this country. Mr. Waltace tells us eggs are never eaten by Pacific Islanders. Strawberries are rejected by some of the tropical races. Esquimaux reject all vegetable food. The people of New Guinea pronounce bread a detestable affair. Milk is used very little in some of our southern states, as it is seldom-tasted by tribes in Africa that keep large herds. One tribe in New Guinea abhors sugar, but devours salt. Snakes are an article of diet quite largely in Asia .-Globe-Democrat.

Durability of Gutta Percha.

percha, there was recently shown a speci-men of it that had laid immersed in rick's drug store. water between Blackwell's island and New York for a period of thirty-seven years, and is still in first class condition, The only indication of wear on the gutta percha is where it rubbed against the rocks on the bottom of the river, and that is very slight. Another specimen is of a ten conductor gutta percha insulated underground cable, which was recently taken from the grounds around the Capitol at Washington, where it was laid in 1873. The cable of which this is a section is still working, and the specimen gives every indication of being as good as when first put down, fourteen years ago.—Frank Leslie's.

Who Make the Best Sallors.

The American able seaman is a thing of the past. Indeed, he isn't wanted. His very Americanism places him at a disadvantage in seeking a berth. He is not a good subordinate. And he knows too much for his own good. The best sailors, from the masters' standpoint, are Scandinavians, Norwegians, Swedes and Dutchmen. Italians and Frenchmen are in more demand in the winter for southern voyages, as being better acclimated, but at other times are not preferred.

Negroes do not make the best sailors, but are useful in the cabin, and there are usprily two or three aboard every ship. But the best seamen are rarely anything more. The men who rise to be officers are almost always Americans, Englishmen or Germans.—Edwin Atwell.

Starvation Among the Eskimo.

When the food supply of the Eskimo village is reduced to that point where physical weakness ensues among the members, the distribution of it among the people is no longer equal. The good, able bodied bunters among them still receive from the amount enough to keep them in strength, and when this is no longer sufficient to go around among all of them, the better of these even yet are on full rations, until it gets down to the best hunter, who is kept in good physical condition until the last morsel disappears.—Frederick Schwatka in St. Louis Republican.

Silva Porto, a famous Portuguese traveler and slave trader, who died at Bihe, in Africa, recently, was the first white man to cross the Dark Continent. He accomplished that great feat in 1853 .-Boston Budget.
