To cure any case. With each order received by us for six boxes, accompanied with \$5.00, we will send the purchaser our written guarantee to return the money if the treatment does not effect a cure. Guarantee issued only by Will J. Warrick sole agent, Plattsmouth, Neb.

Railway Bills in Parliament.

Few of the outside public can have any idea of the enormous cost of getting a railway bill through parliament. The parliamentary, surveying and engineering costs of the Kendal and Windermere company amounted to a trifle over 2 per cent. on the whole expenditure on the line. Of parliamentary costs the Brighton railway averaged £4,800 per mile; Manchester and Birmingham, £5,100; Blackwall, £14,414. These figures are almost beyond belief, when we consider that some English lines in favorable positions cost altogether only £10,000 per mile. The Brighton line for two sessions fought a desperate battle against several other companies, and when its bill came before the committee the expenses of counsel and witnesses amounted to over £1,000 a day, and the discussion of the measure lasted fifty days.
The solicitor's bill of the Southeastern railway contained 10,000 folios, occupying twelve months in taxations and amounted to £240,000. One company found such difficulty in getting their bill through its preliminary stages that at last, when they had reached the long desired last stage, they had already spent nearly a million of money, and this simply for obtaining the privilege of making the railway. Of the terrible costs which have been incurred only to lead to ultimate failure, one instance will be sufficient. The discussion upon the Stone and Rugby bill lasted sixty-six sitting days, from February till August, 1859, and in the year 1840 the measure was defeated, after having resulted in a loss of £146,000 to its unhappy promoters.
It is needless to say that such enormous expenditure cripples many a railway, and prevents its shareholders from ever earning good dividends. The ceaseless energy, untiring perseverance and neat diplomacy which have to be shown in pushing a railway bill to a successful issue are almost beyond belief; but it is much to be desired that some means should be discovered of keeping down the expenses which so often go far to ruin a line even before it has begun working.—*Railway Press.*

Degeneration of the Human Teeth.

The law of retardation exhibits itself in the teeth of the higher races of mankind in a highly inconvenient manner. The greatly developed brain requires all the available room in the skull; there is no space left for the attachment of muscles for a powerful jaw. Cooked food also causes a degeneracy in the development of the jaw. There is constantly no room left for either the wisdom teeth or the second upper incisors; the wisdom teeth are retarded, often cause great pain, and decay early. The second incisors appear in staid and unexpected places, and often (in America especially) do not cut the gum at all. Professor Cope says that "American dentists have observed that the third molar teeth (wisdom teeth) are in natives of the United States very liable to imperfect growth or suppression, and to a degree entirely unknown among savage or even many civilized races."
The same suppression has been observed in the outer pair of superior incisors. This is owing not only to a reduction in the size of the arches of the jaws, but to successively prolonged delay in the appearance of the teeth. In the same way men, and the man like apes, have fewer teeth than the lower monkeys, and these again fewer than the insectivorous mammals to which they are most nearly allied. When this difference in dentition has been established, civilized man may claim to place himself in a new species, apart from low savages as well as from high apes.—*Mrs. Alice Bodington in Popular Science Monthly.*

Cocoon Culture in Florida.

It is probable that the cultivation of the cocoon for profit will always be in Florida, be confined to the region on the Keys and mainland south of the Caloosahatchee river, though the palm will continue to be grown for its great beauty, or a chance crop of nuts, in protected spots, even as far north as the latitude of Tampa and Cape Canaveral. The cocoons produced in Florida are a trifle smaller than those of the tropics, and are not considered so valuable for seed, hence most of those used for planting are procured from Central America, more especially from the Bay Islands (Utilla, Bonaco and Ruanan) and mainland of Honduras.
The nuts that have not sprouted on the voyage are sometimes planted in nursery beds and transplanted when a year or eighteen months old. Only a small percentage fails to germinate, though sometimes the sprouts are a year or more in appearing. The distance apart at which they are planted varies from fifteen to twenty-five feet; twenty feet is the usual distance. The only cultivation given on the Keys is the occasional cutting of the weeds and undergrowth in spring and fall. There is a popular saying that a bearing cocoa palm will produce one nut for each day throughout the year, but this is a little overdrawn, the best trees producing about 200 nuts per year.—*American Agriculturist.*
Pure water is being reached by artesian borings 300 feet beneath the salt water of New York bay, 100 feet from shore. A dock company is sinking a twelve inch well.

A Hint for Cities.

Nothing could be better than the association recently formed in Philadelphia called the Open Space association, having for its object the increase of small parks and other openings in the mass of houses as a sanitary measure, and also for the comfort and refinement of the people. This is better than sending crowds of children out for open air during a month of summer. An address before the Missouri Horticultural society, some years since, recommended a system allowing for an opening every fourth of a mile in all streets. In this way a city would be thoroughly sunny and at the same time be provided with shaded spots. The same plan included drinking fountains in each opening provided three times a day with ice. Old cities can only be improved. New cities can be laid out on the better principles. Such cities could not easily have portions that fall into degraded physical habits and become both vile and unsightly. To reform men we must reform homes.—*New York Graphic.*

Machine Noise for Nerves.

It has been suggested that the noise of machinery has a beneficial effect upon the nerves of girls and women employed in factories. For the first few weeks of her work amid the ceaseless clatter the employe generally has headaches, a tendency to deafness, and suffers considerably from insomnia. Later, when she has become accustomed to it, the headaches disappear, hearing is remarkably acute, and her nervousness is much abated. The result is the reverse of what would be expected, but statisticians and hygienists say that it is what is found in the majority of cases.—*Chicago News.*

Tallest Chimney in Existence.

Probably the tallest chimney in the world is one that is being erected at East Newark. Its diameter at the base is 28 feet, and it is to be 9 feet in diameter at the top. It is to be of solid brick to an altitude of 310 feet. A cast iron rim 20 feet in diameter and a bell will surmount the whole, making the total altitude of the structure 335 feet. There will be 1,700,000 bricks used in its construction, and its cost will be \$65,000. A view of it can be had from trains crossing the Newark meadows.—*New York Sun.*

Nothing Like the Dinner Horn.

Japanese gongs melodiously summon guests to dinner, and are considered a great improvement upon the dinner bell. Of all devices, however, which have been invented to call people to meals, including the bugle, the gong, strings of bells suspended from the portiere rod, and the soft spoken waiter, no arrangement sends such a thrill and awakes such an appetite as the farmer's horn.—*Chicago Herald.*

Center of Our Universe.

Considering the fact that many astronomers are inclined to regard Alcyone the chief star of the Pleiades, as the center about which the universe revolves, it seems quite curious that many savage and semi-civilized tribes have given this group of stars an extraordinary importance. The peculiar beliefs which they hold concerning it appear to be of great antiquity.—*Arkansaw Traveler.*

Size of the Waist.

Statistics furnished by the London stay and corset makers prove that the average size of the female stay wearing waists has decreased two inches in the last twenty-five years. One mother had ordered a corset of sixteen inches to be worn by her 17-year-old daughter by day, and one of eighteen inches to be worn at night.—*New York Sun.*

Philosophy of the Plantation.

Mr. Levi Fisher sold a couple of bales of last year's cotton to the Bensons this week. "Some one told him he could have got more for it if he had sold it last year." "Yes," was the reply, "but if I had sold it then I wouldn't have the money now." Something in that.—*Hartwell Sun.*

Taking the Lead.

Southern women are said to have taken the lead of their sex in money making in New York. The head of the richest firm of dressmakers is a southern woman, and women of southern birth come to the front in other directions.—*Chicago Herald.*

It has been discovered and authoritatively announced that the first man to turn the handle of an organ was a native of the province of Tende.

Ice was produced in summer by means of chemical mixtures by Mr. Walker, in 1783. This was the first known attempt in this direction.

A discussion of the Malthusian theory elicited the statement that clergymen as a rule have the largest families.

A note obtained by fraud or from a person in a state of intoxication cannot be collected.

A single grateful thought toward heaven is the most effective prayer.—Lessing.

WHAT ONEARTH

Is the reason people will not, can not, or do not see any difference in cheap nostrums put up by cheap John houses or irresponsible parties at enormous profits, rather than take a medicine of world wide reputation and one that is giving universal satisfaction at equal price? No medicine in the world is giving such unparalleled satisfaction for purifying the blood as BEGG'S BLOOD PURIFIER & BLOOD MAKER, and ever bottle that does not do its work will cost you nothing. For sale by O. P. Smith & Co., druggists.

FOR SALE.—A good span of matched ponies for sale, they are a number one buggy team. Enquire at this office. If

Everything necessary for furnishing a house can be purchased at H. Boeck's.

You query why from home I go, Why 'bout the town I rove?

The reason why is plain, you know, We've got no GAMBLING STORE.
