The Beautiful Oleographs given away with

VOICES.

December's wind was keen and shrill; The streets were desert, bleak and bare. I could but inly feel the thrill Of wintry sky and leaden air, Made but more leaden in the glare Of lamp and gas, as on the car There fell a voice whose faded trill Gave little sign of merrie cheer; For Fortune's hardest shafts are hurled On hearts that hunger through the world.

The face was thin and wan; the frock So tattered, scanty, old and thin,

Was feeble screen to meet the shock Of coid without and cold within:

Yet ever clear above the din There rose: "The thief rejoiced to see That fountain in his day:" to mock

It did but seem her misery, And Fortune's hardest shafts but hurled On hearts that hunger through the world:

"I will not leave thee nor forsake," Is yet the only voice that cheers The aching heart of man to slake His weary lot of hopes and fears-Frail pendulum 'twixt smiles and tears!

To find a haven safe at last, And anchorage therein to take, From the keen wind and biting blast

Of Fortune's shafts, no longer hurled On hearts that hungered through the world.

-W. K. Leask in Chambers' Journal.

One Horse Power.

When men first begin to become familiar with the methods of measuring mechanical power they often speculate he had crossed over to the island duri on where the breed of horses is to be found that can keep at work raising 33,000 pounds one foot per minute, or the equivalent, which is more familiar to some mechanics, of raising 330 pounds 100 feet per minute. Since 33,000 pounds raised one foot per minute is called one horse power, it is natural that people should think the engineers who established that unit of measurement based it on what horses could really do. Eat the horse that can do this work does not

exist. The horse power unit was established by James Watt about a century ago, and motor, picking up its electricity from a the figures were fixed in a curious way. Watt found that the average horse of his district could raise 22,000 pounds one | and inasmuch as, for each track, there is foot per minute. At that time Watt a separate tunnel only a trifle larger than was employed in the manufacture of engines, and customers were so hard to find that all kinds of artificial induce tions), each train acts as a piston, driving ments were necessary to induce power users to buy steam engines. As a method of encouraging them Watt offered to sell passed. engines reckoning 33,000 foot pounds to a horse power. And thus he was the means of giving a false unit to one of quarters of a mile apart; any foul air the most important measurements in the world .- Rider and Driver.

A Curious Mining Coincidence.

The figure 9 is curiously and intimately connected with all the great gold mining excitements of the Nineteenth | murky days it has been noticed that the century. The great Algerian gold bub ble formed and broke in 1809. Next appear, are far more pleasant in the tuncame the Mantazan mountain craze in 1839, when solid bowlders of gold as Sterne in Forum. large as flour barrels were reported. The California gold fever broke out in 1849. and raged until counteracted by the Pike's Peak boom in 1859. Ten years later, in 1869, "Old Virginy," the celebrated miner, struck the lucky lead which made Virginia City and Nevada famous in the mining annals of the world. Eighteen hundred and seventynine came in on time with the Leadville

A Very Bly For. Many stories told of the crafty for are doubtless incidents of the imagination. But a recent writer tells an anecdote which, though taxing belief, he says is vouched for by an eye witness of the affair. Some fishermen on the west coast of Ireland were in the habit of going to a small island, a few hundred yards from the mainland, in quest of bait. The island was inhabited by large

numbers of rabbits, and could be reached at low tide by wading, the water there being only a few inches deep. One morning they went in their boat quite early, it being high tide, and on landing saw a dead fox lying on the beach. The fur of the animal was all bedraggled, and he seemed to have been drowned. One of the men, remarking that his skin was worth something, pitched him into the boat. Procuring their bait they returned to the mainland, and the man who had possessed himself of the fox seized him by the tail and flung him on shore.

As soon as the animal struck the heach he picked himself up with considerable agility for a dead fox and shot off like : flash up among the cliffs, while the mean stood staring at each other in mute a tonishment. The men concluded th the night, when the tide was low. search of rabbits, and finding in t morning that he was cut off from mainland counterfeited death, with expectation of thereby procuring a parage to the shore in a boat, an expect tion which was fully realized .- Bosto Courier.

The Greathead Underground System. The cars are supplied with longitudinal seats, lighted by electricity, and luxuriously cushioned, the passengers facing one another. The locomotive is an electric central rail through which the electric current is conducted by a copper wire: the train (which fills almost the whole of the annular space, except only at staout, from station to station, the air through which the preceding train

The stations are connected with the open air and are not more than threewhich gathers in the tunnel is thus expelled by each passing train. Indeed, the air in the tunnel is of a more equable temperature, and is kept more constantly moved and freshened, than the air on the surface; and frequently on dark and air and atmosphere, strange as it may nel than on the street surface.-Simon

Raising Water in London Docks.

In lieu of incurring the immense expense of excavating the London docks to accommodate the increased size given to modern ships, large pumping engines have now been set up, and the water in the docks is raised by this means. Some idea of the demands upon these engines can be had from the size of the docks, one of which has an area of nearly ten acres, the pumps which raise the water MERCHANTS having a capacity of 685 tons per minute and raising the water level five feet in one a half hours. Centrifugal pumps of superb workmanship are employed, driven direct by compound tandem engines, and the power of these pumps is evident from the fact that the inlet orifices to the main pumps are fifty-four inches in diameter, and, when worked together, the three pumps have a capacity to raise 57,600,000 gallons of water in five hours, against an average head of ten feet. The pumps are arranged to be worked separately and independently or together, as desired, and the engines are supplied with steam at a hundred pounds pressure by powerful boilers .- New York Sun.

GOOD BAR CONNECTED

WANTED-A desirable tenant for the Dovey homestead, corner o Seventh and Oak streets. E. G. DOVEY & SON.

Everybody says that Gering & Co sell the most wall paper and paint Why? Because they sell the best goods for the least money.

A gold ring was found near the B. & M. shops yesterday which the owner may have by calling at the B. & M. shops and proving property.

What did you say? I said that Gering & Co's soda water and frosted cream are out of sight,

each \$10 worth of goods Lake county, Colo. Eighteen hun-dred and eighty-nine broke the charm, but 1899 may make up for lost time. there being two 9s in that date .- St. Louis Republic.

frenzy and the famous "carbonates" of

Hawthorne's Old Home.

The ancient fireplaces in the old house in which Hawthorne was born on Union street, in Salem, Mass., have been reopened after having been closed for many years. The old staples for the iron crane on which swung the kettle are still in position. In the fireplace in the room in which the romancer was born there was found an ancient iron shelf on which were several old fashioned buckshot and rifle balls, just as they had been run in the molds. There was also an old time iron firedog, much worn -Philadelphia Ledger.

Ramie Fiber for Pipes.

Steam pipes are made of ramie fiber, hardened under tremendous hydraulic pressure, and possessing a tensile strength equal to two and one-half times that of steel. The ramie fiber, or China grass, has the property of being unaffected by moisture; it will not shrink nor swell, it is a nonconductor of heat, it cannot rust, and these features. together with its great strength, are all desirable in steam pipes, its utilization in this line being regarded, therefore, as one of the possibilities of the future.-New York Sun.

To Help Laboring Men.

To overcome the serious results that are experienced upon coming from protracted labor under compressed air, a waiting chamber, where one can rest and have the change of pressure take place gradually, has been used of late, and it has been found that some diseases incident to such work are prevented and some cases cured. The time for resting varies from five to twenty minutes .-New York Times.

It is rather interesting to note the photographic illustrations of the primitive manner in which mails are carried even | ened by the tipsy imitation, either given nowadays in northern Michigan, where the function of the United States post is undertaken by dogs. The latter, in bolt upright. An old hat slouched reckteams of six, draw sledges carrying the letter sacks over the wintry snows.

Where a face is used on a piece of money it is always in profile, because the cameo is more readily struck with the die in that manner, and if a full or three-quarter face were represented, the nose of the gentleman or lady would get damaged in circulation and produce a ridiculous effect.

It is related as a curious fact that Paris, with a population of nearly 2. 500,000 souls, has less than 100 hegroes within its limits. Statisticians say that the whole of France cannot muster a negro population exceeding 500.

A recent discovery proves that pineapple is a remarkable digestive agent tf and capable of emulsionizing and part-ly digesting beef.

The Big Kimberley Mine.

No pen can adequately describe the appearance of the Kimberley mine. It is the largest hole made by man, and in the shortest space of time, for the incentive to work was there-the diamond. A spectator standing on the edge looks down and sees men at work looking like ants in size, and during the blasting hours he can in perfect safety witness the explosion of thousands of pounds of dynamite and note the rending of masses of blue and rock, which would fall far below him.

As an honor to the late "Chinese Gorwriter saw the Kimberley mine illumin- mele. ated at night with thousands of improvised lamps, assisted with colored fires and displays of fireworks. The weird effect produced was grand, for the eye could not properly measure distance at night, and the twinkling lamps but served to heighten the effect.-Engineering Magazine.

The Crude Scarecrow.

The old clothes scarecrow in its crude state is merely a wooden cross over which is drawn a tattered coat. Usually about half of each sleeve's length dangles over the end of the short arm, lending an aspect of lassitude that is heightto, or speedily acquired by, the cross. You never saw a scarecrow standing lessly above the coat, never fails to give an air of demoralization to the figure. -Lewiston Journal.

Royal Fish.

Throughout the British dominions bone, which was useful in her toilet. was supposed to be in the tail; the truth being, however, that both the whalebone and the precious ambergris were to be found in the head.-Harper's Bazar.

Robert Barrett Browning, the poet's only child, is now a man of forty-two years. He is a water colorist of some repute and is married to an American lady.

Elam Parmele has pushed his way to the front as a livery man by keeping nothing but the finest car riages and buggies and best horses to be found in the state. Those wanting a satisfactory livery can't don" when he visited the mines, the do better than to call on Mr. Pardtf
