Some Big Legal Fees. Senator Carlisle's fee of \$25,000, which he is to receive in the Preston-Beal case. decided in the court of appeals at Frankfort, Ky., the other day, recalls some of the large fees that have been paid to attorneys. Judge Brown, of Membhis, also in a Kentucky case, received a fee of \$50,000. The case in which Senator Carlisle won his big fee made the heirs of Robert Wickliffe richer to the extent of \$220,000. General Draper, of New Jersey, is married to one of these heirs, and it was as the representative of Mrs. Draper that Senator Carlisle came into the case, and his fee comes entirely out of her portion of the prise to him, and he could not underestate. I am told that the senator did not even make an exhaustive study of the case, but made his argument at Frankfort from briefs filed by the attorneys for other heirs.

To do this required his presence in Frankfort five days, and this is said to Professor De Witt Van Court and Phil have been all the time he had to devote | Boulo were the boxers, and they gave to the case, so that his big earnings were as much per day as a member of congress receives for a year of heavy brain fag for his country and the old flag-not counting perquisites.

The decision of the United States court was handed down something over a year ago in the Fiske will case against | allowed a sigh of relief to escape him. the Cornell university. In this case the university lost \$1,750,000, and the law firm of Hill & Bacon is said to have received \$400,000 as their honorarium from the successful heirs. The Mr. Hill in this firm is none other than Senator David Bennett Hill.

The fee which John E. Parsons, the New York lawyer, received for organizing the Sugar trust is believed to be the largest ever paid to one New York attorney. The amount was \$400,000, the same sum received by Messrs. Hill & Bacon in the Fiske case. And yet, notwithstanding this large fee, it did not take the courts long, once they got at it, to destroy the apparently invincible legal structure which the able and high priced lawyer had reared .- John A. Cockerill in New York Recorder.

A California Sculptor's Work. Douglas Tilden, the deaf and dumb California sculptor, has completed in clay at his Paris studio a group of heroic size which he proposes to cast in bronze and send to the World's fair. One of this sculptor's works is now to be seen in Golden Gate park, at San Francisco. The subject of the last is a struggle between two Indians and a she bear (grizzly), whose cubs the Indians are trying to make off with. A Parisian critic says of the group: "It is broad in treatment and daring in execution without exaggeration. The figure modeling of the two Indians is of high power, strong and harmonious at the same time. He has succeeded in showing not the mutilation of the two Indians by a ferocious brute, but a fine realization of a struggle for mastery and life which thrills with interest." This sculptor has been working in Paris four years, and was the first American to receive "honorable

An Unlucky Locomotive.

cisco Chronicle.

mention" at a Paris salon.-San Fran-

Engineer Knowblow, of the Erie, has finally agreed to preside at the throttle of engine No. 670 of that road. This is the machine that passed through the two terrible wrecks on that road at Ravenna on July 3 and at Kent on Sept. 30. When it came out of the Meadville shops recently none of the boys wanted to sit at the right hand side of the cab in the unlucky engine, and it was only after considerable persuasion that Engineer Knowblow was persuaded to take charge of the hoodooed locomotive. Railroaders are like sailors-they have their superstitions, and an engineman no more likes to run an unlucky machine than does an old tar to sail on certain unfortunate vessels.-Pittsburg Post.

From London to Chicago for \$125. Tours suitable to all pockets are being arranged by the London Polytechnic Young Men's Christian institute. A yachting trip to Norway, lasting three weeks, and including a visit to the land of the midnight sun, is to cost only £12 15s.: the island of Madeira can be visited for £12, while £7 5s. will cover the expense of sixteen days in the Bernese Highlands. There is also to be a trip to the Chicago World's fair, costing only twenty-five guineas from Liverpool .-London Tit-Bits.

A Maine Woodpile.

The most wonderful woodpile on record is owned by a man in Oxford county, Me. In the pile of eight cords, all cut from one piece of forest, are no fewer than twenty different kinds of wood, viz., white birch, yellow birch, white maple, rock maple, white ash, brown ash, black cherry, wild cherry, apple tree, elder, beech, moosewood, willow, fir, dogwood, spruce, sugar plum, elm, poplar and hemlock.

The Joker Is at Large. J. C. Young, of Albany, has two wooden legs. A fool friend, who could think of no other way to be funny, tried to throw a knife into one of his legs. He succeeded, but it struck above the knee where the leg was flesh and blood. Mr. Young is now nursing an ugly and painful wound. The fool friend isn't in jail, but he ought to be.-Portland Orego-

Maine Soldiers Going to the Capital. Heath post, G. A. R., of Gardiner. Me., will go in style to the national encampment in Washington in September. The members have chartered the steamboat Kennebec, a seagoing side wheele: of 1,652 tons, to take them and their friends to the number of 400 on a ten days' trip, allowing four days at Washington.

Mineral Poison Kills Cattle. In Fayette county, Ida., a peculiar mineral poison exudes from the ground and contaminates the grass, upon which a herd of cattle fed. This caused great losses to stockmen, who at first thought the poison had been administered by

AN ASTONISHED SOUTH SEA KING.

M'Bora of Butaritari Sees Many Won-

derful Things in San Francisco. King M'Bora of Butaritari spent two hours at the Olympic club, and was probably more amused and surprised than by anything else he has seen in San Francisco. The members who were present practicing in the gymnasium gave an impromptu exhibition, which interested his South Sea majesty very much, and he gave evidence of this in grunts and by gestures of surprise, and almost of fear, at some of the feats of the athletes. The tumbling was a surstand, while Professors Tronchet and Chapins were fencing, how it was that they did not drop dead when struck by the foil. A burlesque boxing contest ending in a well "faked" knockout was arranged for the king and his party. an exhibition which interested his island majesty more than the genuine fight he saw at the California club. At the end Boulo was apparently knocked out, and he was carried out of the room limp and motionless. Of course he immediately returned, and as he appeared the king

not been killed, as he was so plucky. After the exhibition King M'Bora and his party were shown through the Olympic club building. In the billiard room he had his first meeting with a piece of ice. His dusky majesty was given a glass of ice water in response to a request for a drink. He saw the piece of ice floating in the water and could not understand what it was. He put his royal right hand into the glass are seized the cube of ice, but immediatel dropped it and jumped back severel frightened. After an explanation is picked up the ice again and watches it slowly melt in his hand. He seemed to partially understand the philosophy of the thing and gave an order for an ice making machine, which he will take to Butaritari with him to cool his roy... throat on hot summer days.

and remarked through the interpreter

that he was glad the little fellow had

In the ladies' parlor the glass chand her was lighted by electricity, and the king immediately wanted to know where the oil tank was. He had had some ex perience with gas before. The first night at his hotel, after having seen the gar turned on and lighted, he nearly terminated his royal career by playing the Farmer Wayback act. He turned on the gas and lay down waiting for the gas to

light itself. One of the members of the Olymp club who was going through the room with the party wanted the king to talk through the telephone. His majesty had already had an experience and was so shocked that he did not care for another. It was at Sutro Heights on his visit Saturday. W. Lauterbach, who spent some time on the Gilbert islands, went to the stables on the place while the king was in Mr. Sutro's house. When the telephone connection was receiver to his ear. As he did so he heard words in his native language, and he dropped the instrument as if struck by lightning. A long explanation could not fully satisfy his mystified majesty. The king and his party remained at the rooms of the club until nearly midnight. -San Francisco Chronicle.

The Secret of Happiness.

Not long ago Professor Blackie had oceasion to be in the Fair City-Perth. He was waiting for a certain train, and was marching up and down the platform whistling gayly, and for all the world like a schoolboy en route home for his holidays. A gentleman near by, at once recognizing the picturesque figure and wishing to enter into conversation with him, went up to him and asked him: "Professor, may I ask the secret of

your happiness? The genial professor smiled and an

swered: "Well, here is the secret of my happi ness: I have no vain regrets for the past, I look forward with hope to the future and I always strive to do my duty There," he ended emphatically, "you have it." And he straightway set to and walked up and down again, whistling as before.-London Tit-Bits.

An Antediluvian Joke.

A hardware drummer is responsible for the story that a clerk in one of our hardware houses was informed that the last tailor's goose was sold and to order a dozen more. After puzzling over the matter for some time he wrote on a piece of paper as follows:

12 tailor geese. 12 tailor's geese. 12 tailor gooses. 12 tailor goose. 12 tail-

Then he got rattled, scratched his head, looked in the dictionary and finally formulated the following:

"Gents please send at once one tailor's goose and eleven others."-Burlington Hawkeye.

Monkeys Might Be Made Useful. Monkeys could be used in certain cases

of fire, where expert climbing might be required; they could be used as messengers to some extent, and to do many light chores for man. They could be taught to destroy many vicious insects, such as tobacco worms, cutworms, cabbage worms and many others. They could be taught to do many things on a farm. and I think long domestication would develop many fields of usefulness for them.-New York Independent.

A Stroke of Economy.

The height of economy was that recently practiced by a woman who will move to the suburbs, and who effected the sale of her address die which she has used for her stationary to the incoming tenant of the house she will leave.—New York Times.

Bather Literal.

"That's an angel of a house!" said she.
"Not quite," he replied. "It only has no wing."—Harper's Basse.

Two Mythical Islands.

Marco Polo's "Travels" gives a curiforced to admit that their whereabouts of earth called cova. is doubtful in the extreme.

ter's work on the continent.

As far as Marco Polo's "Island of lost, the combined efforts of the geographers, the historians and the travelers not being equal to the task of bringing it from the mysterious mists which have hidden it for centuries.-St. Louis Republic.

Boards of Trade in Western Cities.

The novelty in western life is the inevitable combination of leading citizens pledged to promote the best interests of their town. Such a body is variously called a board of trade, a chamber of commerce or a commercial club. It is the burning glass which focuses the public spirit of the community. Its most competent officer is usually the highly salaried secretary. He does for his town what a railroad passenger before the anckster gets them. That deagent or a commercial traveler does for his employers, that is to say, he secures business. He invites manufacturers to set up workshops in his city, offering a gift of land or of land and money or of exemption from taxation for a term of years. The merchants, and perhaps the city officials also, support his promises. In a South Dakota city I have known a fine brick warehouse to be built and given, with the land under it, to a wholesale grocery firm for doing business there. In a far northwestern city there was talk of sending a man east on salary to stay away until he could bring back capital to found a smeltery.

These boards of trade often organize local companies to give a city what it needs. They urge the people to subscribe for stock in associations that are to build electric railways, opera houses, hotels, convention halls, water supply and illuminating companies, often divid-Bora was asked to put the ing an acknowledged financial loss for the sake of a public gain. Thus these boards provide the machinery by which the most ambitious, forward and enter prising communities in the world expend and stilize their energy.-Julian Ralph in Harper's.

Salamander from Artesian Wells.

Mr. H. G. Zimmerman, of Albion, Ind., recoully discovered in a trench leading from an artesian well a good sized and very lively mud puppy or water dog. This well is eight miles north of Huron, S. D., and is 1,250 feet deep. Everybody was confident that the reptile came from the well, as there is no other water for miles and miles. Its head was shaped like that of our common catfish, its color was similar to that of the catfish, and it had bushy external gills, besides four legs.

Many conjectures as to what the ant mal could be were made; some persons thought it principally fish, others lizard, and the most general conclusion was that the thing was a mongrel between the two. A genius (Proteus) belonging to the same family as the above (which we take to be Necturus), and found in caves in southwestern Austria, is blind and colorless. Mr. Zimmerman states specifically that the puppy found by him had a good pair of eyes and was dark in color. Lake Byron, twelve miles north of where this batrachian was found, is said to fur nish good fishing .- Forest and Stream.

Where Artists Blunder.

"I never saw an artist yet who could correctly paint a horseshoe," remarked a friend of mine, pausing before a Broadway picture store. "They invariably paint it with an equal number of nails on each side-sometimes three, sometimes four, and even five nails. As a matter of fact, there are four on one side and three on the other, the extra nail being on the inside of the foot, where the greatest strain comes."

Which reminds me of the lines of a distinguished American poet in which he sweetly depicts the drowsy cattle on a summer's day lazily lapping the cooling waters of the crystal stream. The same peculiarity is also poetically attributed to the horse and other animals, the model of the poet having probably been the house cat.-New York Herald.

Livery of Parlor Maids.

English parlor maids wear a distinct livery, not often, though occasionally, seen in New York houses. This consists usually of a plain, long, black or dark woolen skirt, a loose, open jacket of the same material, and either a white vest with gilt or ornamented buttons or a vest made of livery stripes. With this are worn cap and apron.-New York

A Puzzled Yankee.

A story is told of Lord Grosvenor, who, while traveling in this country, was asked by a Yankee how he got his living. My lord replied that he did not work, as his father supported him. "What a dear old gentleman," said the Yankee; "how will you ever manage to live when he dies?"- San Prancisco ArThe Nitrate Fields of Chill.

The caliche, or raw nitrate of soda, is ous account of two islands, "distant not equally distributed over the pampas from Kesneacoran about 500 miles to- of Chili. The most probable conclusion the earth below the caliche so as to that has yet been arrived at is that Se form a little hollow cup. Into this a rodah, a small island on the west coast charge of gunpowder is introduced and of India, is the celebrated "Island of Fo subsequently exploded. The caliche is males," it being the resort of dancing then separated by means of picks from girls and women who retire to the place the overlying costra and carried to the for a summer's outing after a hard win refinery. Both in appearance and composition it varies very much. In color it may be snow white, sulphur, lemon, Males" is concerned it is irretrievably orange, violet, blue and sometimes brown, like raw sugar.-Blackwood's Magazine.

The Age of Fresh Eggs.

As to just how old the eggs may be when they get into the hands of the consumer in this town is a matter for conjecture, and a task that would cause pleasant thrills in one inclined to mathematics. Any one who has ever spent any time in the country and made a proper use of his eyes knows it is the habit of farmers to keep their eggs until they have a certain quantity before disposing of them.

The farmers may collect the eggs for an entire week and then dispose of them, or they may keep them for two weeks pends entirely upon the number of eggs which that particular farmer's hens will lay in a given period.

The hucksters go about the country once or twice a week the dealers say. They gather the eggs here and there. and when they have gathered a certain quantity turn them over to the shippers.

The shippers, in turn, hold the eggs until they, too, obtain a certain quantity and then consign them to the dealers in this city. When the eggs get here finally the dealers say they have received a shipment of fresh eggs, and mean it too.

The dealers maintain that an egg two weeks old in ordinary weather is just as good as an egg that is not more than twenty-four hours old. In fact, they make bold to say they would eat an egg two weeks old just as soon as one two hours old, and relish it just as much.-New York Evening Sun.

The Year 1881.

The year 1881 was a chronological oddity of the oddest kind, besides being a mathematical curiosity seldom equaled. From right to left and left to right it reads the same. Eighteen divided by 2 gives 9 as a quotient; 81 divided by 9 gives 9; if divided by 9 the quotient contains a 9; if multiplied by 9 the product contains two 9s; 1 and 8 are 9; 8 and 1 are If the 18 be placed under the 81 and added the sum is 99; if the figures be added thus-1, 8, 8, 1-it will give 18 as the result. Reading from the middle from right to left or from left to right it is 18. and 18 is two-ninths of 81. By adding, dividing and multiplying, 10 9s are produced, being one 9 for each year to the beginning of the last decade of the Nineteenth century.

No wonder the fortune tellers, the astrologers and the mathematicians weave so many strange fancies around that curious combination of figures. It may have been what induced Mother Shipton to end her prophetic jingle with, "And at last the world to an end shall come in eighteen hundred and eighty-one."-St. Louis Republic.

A Very Old English Cloth.

Fustian is a species of cotton cloth much used by the Normans, particularly by the clergy, and appropriated to some orders for their cashubles. The Cistercians were forbidden to wear them made of any material but linen or fustian. A stronger description was first manufactured in England, at Norwich, temp. Edward VI.

It was much used for doublets and jackets in the Fifteenth century, at which time it appears to have been imported from Italy. "Fustians of Naples" are named in a petition to parliament from the manufacturers of Norwich, 1 Philip and Mary, 1554. The name was corrupted in England into "fustianapes" and "fustian and apes," i. e., "fustian a Naples."-Notes and Queries

Scared Burglars by His Voice.

The ventriloquist, Fred Maccabe, has put his special gift to good use. Retiring late one night he tossed about for some time unable to fall asleep, and then, bearing footsteps down stairs, he felt convinced that thieves had got into the house. Crawling down stealthily close to where they were at work he, by means of ventriloquism, began a conversation and hullaballoo in many voices: "Here they are! Bring the lights! There they go! Shoot, shoot them quick!" The whole gang of burglars thereupon bolted in panic, leaving all their intended plunder behind .- London Tit-Bits.

A Safficient Recommendation. Little Dick-Aren't you goin to call on that new neighbor across the street? Mamma (hesitatingly)-I don't know

anything about her yet.

Little Dick—Oh, she's all right. She's the mother of that new boy I play with. -Good News.
