Thirty-five years ago Abram B. Burt was a leading merchant of Peoria, Ill. When the war broke out he enlisted as a drummer in Company F. Eighty-fifth Illinois infantry, and was discharged Jan. 15, 1863, for disability. He married and settled down to business and five years later went to St. Louis on a purchasing trip. From that time until today his family lost all trace of him and mourned him as dead. He was seen at St. Louis going on an up-river boat and it was thought he was murdered for his money. A year ago his wife applied for a pension, but it was rejected on the ground that Abram B. Burt was, then and is, now drawing a pension under certificate No. 367,270. The department located him in Pittsburgh, and Mrs. Burt was asked to be present on pay-day to confront him. Not feeling well, her daughter went in her place, and a detective was also present to arrest the man, but instead of being an impostor he turned out to be the long lost husband and father. He said he supposed the members of his family were all dead.

The only place to get first class job printing is THE HERALD OFFICE.

RHEUMATISM CURED IN A DAY.—"Mystic Cure" for Rheumatism and Neuralgia radically cures in 1 to 3 days. Its action upon the system is remarkable and mysterious. It removes at once the cause and the disease immediately disappears. The first dose greatly benefits, 75 cents. Sold by F. G. Fricke & Co., druggists, Plattsmouth.

Monday evening engine No. 2, of the Choctaw Coal and Railroad company, hauling an east bound freight, exploded just as it was pulling out of Red Oak, Ia., causing the death of four trainmen. They are: L. P. Durnell, engineer; F. Frederick, fireman; G. W. Martin, brakeman; Henry Landers, night hostler. The trainmen and passengers who occupied the caboose escaped with a few scratches caused by the sudden stoppage of the train. Martin, who was riding on the pilot, was found under the engine trucks. The other three, who were in the engine cab, were thrown eighty feet from the engine. All the bodies were horribly mangled.

The Department of State was informed by telegram from San Francisco, on authority of dispatches by the steamer Australia, of the arrival of Commissioner Blount at Honolulu on the 29th of March. As the steamer left port just after the revenue cutter Rush arrived, there was nothing in the telegram beyond the mere fact of his arrival.

A Sensible Man. Would use Kemp's Balsam for the throat and lungs. It is curing more cases of coughs, colds, asthma, bronchitis, croup and all throat and lung troubles, than any other medicine. The proprietor has authorized druggist to give you a sample bottle FREE to convince you of the merit of this great remedy. Large bottles 50c. and \$1.

Forty-five years ago last Friday the Niagara River ran dry. A theory for the phenomenon advanced by a man who saw it is this: The winds had been blowing down Lake Erie, which is only about eighty feet deep, and had been rushing a great deal of the water from it over the falls. Then suddenly changing, the wind blew this water (comparatively speaking) up to the western portion of the lake. At this juncture the ice on Lake Erie, which had been broken up by these high winds, got jammed in the river between Buffalo and the Canada side, and formed a dam which kept back the waters of Lake Erie a whole day.

The provisional government is in receipt of dispatches stating that President Cleveland is favorable to the principle of annexation, and that Secretary Graham favors it and a prompt ratification of the treaty. Commissioner Blount declines to be interviewed, but from casual conversation it would seem that his labors here may cover a period of several weeks. The Rush will probably return to San Francisco in the meantime. Commissioner Blount did not leave the steamer for several hours, and consequently the reception by the Hawaiian League and the Annexation Club did not take place. The Rush brought dispatches from Washington to Admiral Skerret and also the provisional government, but the nature of them could not be learned. After the first feeling of surprise passed away, expressions of satisfaction at the arrival of the Commissioner prevailed among the annexationists. The Rush brought no mail from the States, and the arrival of the Rio de Janeiro, which is expected to put in here tomorrow on her way to China, is impatiently looked forward to for further particulars as to the sentiment in America.

NEW VARIETIES OF CORN.

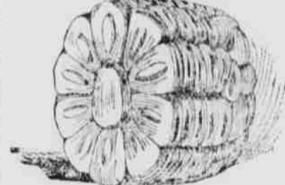

Valuable Sweet Corn—A New One Hundred-day Field Corn.

Among the new claimants for favor this season in way of sweet corn is the late sweet variety introduced under the name of Country Gentleman and depicted in the accompanying cut. The various seedmen in their catalogues for 1893 claim superior qualities for this corn—namely, deep grain, small cob, long ear

and rich, delicious flavor. It is also told that Country Gentleman is productive bearing three and four ears to the stalk. For Burbank's Early Maine the claim made are earliness, pure white cob, kernels not cream white, sweet and juicy, stalks medium height and bearing a good soil two ears to the stalk. Good words are also said for Clark's None such, a strong growing and heavy yielding sweet corn.

The Hickory King is generally conceded to be the largest grained and smallest cobbled pure white dent corn in cultivation. The ears run from 7 to 11 inches in length. The Hickory King ripens medium early and is especially adapted to thin soils, but is not recommended as a safe crop north of the latitude of Pennsylvania. A quite new field corn is the One Hundred-day Bristol,

large eared early yellow dent corn said to be ready to harvest within 100 days from time of planting. The Waterloo is introduced as an extra early dent corn worthy of trial. Pride of the North and Improved Leaming have many advocates. The former is a golden dent. The Leaming is a dent variety.

Business Leghorns.

Here is what M. Sumner Perkins tells in The Rural New Yorker about Leghorns:

"The more acquaintance I have with the Leghorn the more I am inclined to believe that she is the fowl for business, for practical work upon the farm. Parties in offering objections to this breed lay by far too much stress upon the fact that as a table bird the Leghorn is not in it." Reasoning in a similar way, it might be said that the Jersey cow is of no value, since she is worth little or nothing for beef, yet of course no sensible person will speak thus of the Jersey, as for the work for which she is intended she is without a rival. Likewise the Leghorn has been bred for a specific purpose—viz., the production of eggs—and it is fair to judge the fowl only on this basis.

"Let those that think so much of substance in a fowl just estimate what a very small proportion of the profit on a hen comes from the sale of the carcass. A couple of dozen eggs will usually represent the entire value of an old hen in market, and the Leghorn may be counted upon to produce at least four dozen more eggs per year than the so-called market breeds. So obviously this question of market poultry value is hardly weighed. If the Leghorn is utilized as a fertilizer only at the close of her usefulness, still the breed will come out ahead. Farmers must have the best laying fowl. All else is entirely of a secondary nature."

Cutting Seed Potatoes.

Cutting seed potatoes for planting has been a prolific subject for discussion, and many even today hold adverse opinions concerning the size of the pieces for planting. At the Indiana station there have been experiments conducted for a long time, and the authorities give as conclusive facts the results of their trials. It was found that pieces about the same size, but some containing more eyes than others, produced almost the same size stalk and number of tubers. There was really no advantage in increasing the number of eyes to the piece, increasing the size of the piece of potato, however, gave a corresponding increase in the number of stalks. From this it may be judged that a small piece of potato can nourish only one eye, and increasing the number of eyes without increasing the size of the piece of potato is of no avail. The eyes at the seed end of the potato act as a single eye, and not as independent ones capable of producing as many stalks as there are apparent eyes. There is more importance in the size in which the potatoes are cut than in the number of eyes to the piece. The tubers should be cut uniformly in about 1, 2 or 3-ounce pieces. This may be done in almost entire disregard to the position of the eyes. It is uniformity of size in the pieces that produces the most uniform and best crop, according to the experiments conducted at the Indiana station.

Catalogues for 1893.

Attention is called to the catalogues for 1893 issued by leading nurserymen and seedsmen in various sections of the country. Many of these are mailed free on written application. The experienced need these catalogues to keep abreast with the times, for each season now marks new and improved varieties in every department. To beginners they are invaluable with their descriptions of standard sorts and cultural directions for the same.

Something About Canary Birds.

Whenever I buy a canary it seems to be a bird that is especially subject to colds and pneumonia, and it is only by the exercise of the greatest care that I can keep it from succumbing to some pulmonary trouble. Yet the canary bird sellers have their wares for sale in the streets in the coldest weather almost entirely unprotected from the wind. They stand around with them for hours and no bad result seems to come of it.

How is it? I give it up. There must be some conspiracy between the dealers and the birds by which the latter die as soon as they are bought, compelling the purchasers to invest in more canaries. You wouldn't think to look at the little yellow fellows that they were capable of so much treachery. Dealers bring them over from Europe with very few precautions against disease or accident. If I leave one of my canaries alone for 10 minutes at a time, however, he swallows a piece of rag and chokes to death, or the cat gets him. I suppose the whole secret of the thing consists in knowing what you're about. From results I am led to believe that the importer and the open air dealer know what they're about and that I don't, at least as far as the canary birds are concerned.—New York Herald.

Why a Cemetery is So Called. Webster says a cemetery is "a place where the dead bodies of human beings are buried." But that is all he says, and there is not a 5-year-old child in the land that could not tell as much without referring to his "Unabridged." In tracing the derivation of the word I find that the root is in an old Jewish word "caemetera," meaning dormitories or sleeping places. Later on the form of expression was changed to "repositorium." In that section of "Camden's Remains" which has the heading of "Concerning British Epitaphs," I find the following: "The place of burial was called by St. Paul 'sementoria,' in the respect of a sure hope of a resurrection." The Greeks call it "caemeterion," which means "a sleeping place" until the resurrection." The old Hebrew word for cemetery means "the house for the living," the idea being that death is only a protracted sleep that will terminate on the day that Gabriel blows his trumpet.—St. Louis Republic.

The Manufacture of Glass Eyes.

In Thuringia there is a whole district which is dependent for its support on the manufacture of artificial eyes, husbands, wives and children all working together at this means of livelihood. And yet, through these simple German village people turn out their produce by the dozen, no two eyes are ever the same. No artificial eye has its exact fellow either in color or in size in the whole world. The method of the manufacture is not a very complicated art. They are firstly glass plates, which are blown by gas jets, then molded by hand into the form of an oval shaped cup.

The coloring of the eyes is effected by means of tracing with fine needles, the tints being left to the taste of the individual worker, though the scope of their taste is necessarily limited to grays and blues and browns and blacks, which colors are assorted to gether before being eventually dispatched to their various destinations.—London Hospital.

A Neat Escalator.

A neat pickpocket dodge practiced upon rural looking persons in this town is based upon the known good nature and courtesy of the average American citizen. The pickpocket, clad in fine raiment and carrying a stick, stands upon the rear platform of a street car, facing the dashboard. He struggles with a pair of tight gloves, and having vainly endeavored to button one after putting on the other, appeals to the kindness of the man facing him on the platform.

In nine times out of ten he picks the right man, and while the benefactor buttons the gloves the pickpocket with his disengaged hand takes the other's watch. The confederate inside is at hand to baffle the pursuers in case the thief is detected.—New York Letter.

A Cow Superstition.

According to Indo-European folklore the clouds of the heavens were nothing but cows, who were invested with the duties of a psychopomp. At times these clouds descended to the earth and assumed their bovine garb, but their duty remained the same. Hence the superstition prevalent in many agricultural countries that a cow breaking into a garden foretells a death in the family. The psychopomp was merely looking for a soul to escort to the hereafter.—New York Telegram.

What Wrinkles Signify.

Wrinkled foreheads in children betoken consumption, rickets or idiocy. Vertical wrinkles of the brow come early to men who do much brain work. Arched and crossing wrinkles about the lower middle of the forehead betoken physical or mental suffering. Fine close meshed wrinkles which cover the face, sign of age and decrepitude, are caused by loss of contractile nervous force and are prevented by hot bathing, friction and electricity.—Atlanta Constitution.

Do you know?

That more ills result from an Unhealthy Liver than any other cause—Indigestion, Constipation, Headache, Biliousness, and Malaria usually attend it. Dr. Sanford's Liver Invigorator is a vegetable specific for Liver Disorders and their accompanying evils. It cures thousands why not be one of them? Take Dr. Sanford's Liver Invigorator. Your Druggist will supply you.

Free Trip to Chicago.

Separate WORDS FOR EACH and use the letters to spell as many words as you can by using the letters in any order, but not use the same letter in making any one word more than it appears in "World's Fair." It is said, seventy-five small English words can be spelled correctly from the ten letters contained in "World's Fair." Examples: word, wait, soar, shot, etc. If you are good at word making you can secure a FREE trip to the World's Fair and return, as The Scott Seed Company will pay all expenses, including R. R. fare, hotel bills, and expenses to the "Colombian Exposition," and \$50.00 in cash for incidental expenses, to the first person able to make seventy words from the letters contained in "World's Fair." They will also give a free trip to the World's Fair and return (without cash for incidental expenses) to the first person sending fifty-five words as above. They will also give a free trip to the World's Fair and return (without cash for incidental expenses) to the first person sending sixty words as above. They will also give a free trip to the World's Fair and return (without cash for incidental expenses) to the first person sending seventy words as above. They will also give a free trip to the World's Fair and return (without cash for incidental expenses) to the first person sending eighty words as above. They will also give a free trip to the World's Fair and return (without cash for incidental expenses) to the first person sending ninety words as above. They will also give a free trip to the World's Fair and return (without cash for incidental expenses) to the first person sending one hundred words as above.

A Cow Superstition.
