baby bones

are soft, so soft they scarce can be called bones in the earlier years; gradually they harden, and furnish the frame which supports the growing body. The hardening comes from what chemists term "the mineral substances."

When these are absent we have "Rickets"—a lack of bone-tissue, which shows itself in delayed teething, profuse head-sweats, and later, if not arrested, malformations and deformities. Such a baby needs lime for its weak bones and cod-liver oil for its fat-starved body.
