Names Legal Heirs.

Judge Travis, of the county court, entered a decree last Monday in the contest over the heirship to the estate of John King, deceased. The court found that James M. Moodie, Harriet H. Sanders, Emmaline Squire, Martha Bratten and Emma Van Vorous were the legal heirs and as such were each entitled to one-fifth of the King estate. In all there were eleven claimants. This was one of the most complicated estate matters which has come before the probate court for many years. The court found that Mr. King was an illegitimate child, being a son of one Mary Stackhouse, who afterwards intermarried with one George Moodie; that he died intestate, leaving no children, widow nor father, but he did leave surviving him the five children of his mother, Margaret Moodie, whom the court decreed were the legal heirs to his estate. Among the list of claimants were two uncles, a stepister and other distant relatives. The estate involved in the controversy is an eighty-acre farm in the western part of the county, valued at about \$8,000.

Mrs. George Kroehler died at her home in this city on Friday, April 14, 1905, aged 62 years. Mrs. Kroehler had been afflicted for some time and while her demise is deeply felt by her husband and children, the disease from which she was suffering was considered fatal from the start. The funeral occurred on Monday afternoon from the family home, Rev. Youtzy of the Christian church officiating. The funeral was largely attended by friends of the family, the Rebekahs, of which the deceased was a member, attending in a body. The floral tributes were quite numerous and beautiful, which demonstrates the high esteem in which she was held by the community.

Are you interested in Trusses? If you are, we have the exclusive sale of the greatest Truss invented,

The Empire Sanitary Truss!

Light, Clean, Comfortable, Effective.

1. We have designed this truss to be as light as possible without destroying its effectiveness, realizing that the lighter a truss is constructed, the easier and more comfortable it will be to wear and the less a burden to the wearer.
2. The spring is covered with a webbing, well padded, which prevents its cutting into the flesh. The pad being filled with air or water, adjusts itself to the opening of the hernia, without pressing unduly upon any particular part, and can be made hard or soft at will.
3. Our truss is designed to fill a long felt want among trusses, viz.: perfect cleanliness. (a) By removing the screws fastening the pad to the spring, the pad may be removed and the cover washed after removing from spring. (b) The metallic parts of the truss are composed as far as possible of non-corrosive metal, thus obviating the danger of rusting or poisoning the body. (c) The water may be emptied from our water-pad when it becomes putrid and fresh water supplied.
4. Combining the elastic web with the spring, gives the truss the best features of the elastic and spring truss, which is the best device known to hold a hernia in place.
