

The Power of the Hour!

Is Very Plainly Seen to Be a Gasoline Engine.

No matter what the work is that you have, whether it be pumping water, sawing wood, grinding feed, making electric lights, etc., the gasoline engine is very rapidly taking the place of any other power for this class of work.

When I believe there is a person in this community that would send away for an engine, if he didn't think he could save money. You will certainly have no trouble in finding a cheap engine if price is what you are looking for, and if you will look them over carefully, take note of the few pieces that they put on them to operate the mechanism, you can very plainly see why they are cheaper. The fact is, if they put more parts to their engine they certainly would have to get more money. There is no patent on the device of simplicity (as it is so called), on cheap engines. It is just simply making an engine just as cheap as possible in order to undersell his competitor. If you ever have an opportunity just take a look at the machine shops, railroads, large power plants, etc., and see if you can find any cheap grades of engines in their use. They certainly ought to be good judges of engines.

We are agents in this part of the county for Fairbanks-Morse engines and would only be too glad to show you the difference between this engine and any engine of inferior make and cheaper price and show you where they make the difference in price.

This engine can be had in any horse-power from 1 H. P. to 500 H. P., and upright or horizontal, and can also be had to burn any kind of fuel, such as illuminating gas, natural gas, kerosene, naphtha, gasoline, etc.

Before you fully decide to buy you had better see the Fairbanks-Morse and if you don't think it better than the rest, we cannot then expect you to buy this make.

Write or call for a 66-page catalogue and prices.

A Girl's Wild Midnight Ride.
