MOVING PICTURES CHEER BUT DO NOT INEBRIATE

The moving picture show cheers, but does not inebriate. It lubricates the wheels of existence, rests, refreshes, stirs the imagination, brings into play a new set of convolutions, and costs a dime.

It never gives you that dark-brown taste the day after, nor a headache and that tired feeling; nor does it make for a hike to the booby-hutch.

I know a great doctor who prescribed a picture show every afternoon for a patient whose nerves were getting on the outside of his clothes.

The man lived a mile from downtown, and was to walk the distance to the show and back.

The patient rebelled. He scouted the idea. He wanted to take something out of a bottle, or be operated on.

"Do as I say," firmly ordered the doctor, "a picture show every afternoon for a week, and then come back and tell me how you feel."

"But I hate moving pictures!" "Then grin and bear it!" "I'll bear it, but damme if I grin!"

"All right, but go—come back in a week." In a week the man came back. Two grins had begun to grow where there was only a frown before. He had gotten the taste.

This story has the rare and unique quality of being true. And the philosophy is this, that the thing which lifts us out of ourselves, that makes us forget our troubles, that stops brooding and puts the kibosh on introspection, is a whole lot better than many, many pink pills for pale people.—Elbert Hubbard.

JOHN DEERE NO. 999 PLANTER

THIS is the latest improved corn planter made by the JOHN DEERE PLOW CO. This planter has a variable drop, consisting of a train of gears constantly in mesh, and with this device two, three, or four kernels can be planted as desired by merely shifting the foot lever. These gears are enclosed in an oil tight case, and consequently will outwear the balance of the machine.

All corn plates on the No. 999 planter have 16 cells, therefore we get the same drilling distances with this plate as can be obtained on other planters with the 8, 12 and 16 cell plates, without a change of plates. This planter will positively drop all butt kernels with great accuracy, and with the new style cut-off will not break the kernels as in other planters.

The change to hilling or drilling or vice versa is instantly made. No extra attachments and no extra tools required. A quick detachable runner, which may be taken off by loosening two nuts, is another improved feature.

The check heads are simplified and have a less number of parts than is generally used and are provided with reversible pulleys, which adds to the life of the working parts. The reel is under-hung and is in the easiest place to be put in the frame. The wire is carried lower, and the knots will not strike the sill when the wire is being reeled up after planting.

This planter can be equipped with a fertilizer attachment at any time you should want one. If you want a planter that you can absolutely depend upon, be sure and get the JOHN DEERE NO. 999.
