Can You Grubstake \$1 or More for Oil and Copper at Gallatin, Missouri?

Personal Statement of John W. Everman

Since the discovery of Oil and Copper on the 15,000 acres of land we have near Gallatin, I have been asked so many questions and have had so many propositions put up to me that I am taking this public way of explaining just how I propose to develop the land, and make money for myself and my associates. Also I offer a few people the opportunity to "grub stake" with me; and have arranged with the Farmers Exchange Bank of Gallatin to take care of the money, so people who do not know me can deal with the bank. Probably you have heard exaggerated rumors, also stories about Eastern Capital "grabbing off" the leases, but the facts are good enough to interest anyone who is willing to risk a little money for the chance of getting big money quick.—also I do not want any "promotion" or "stock selling scheme," etc. If the plain facts are not good enough and a straight, clean-cut, neighborly developing proposition does not appeal to any man, then I advise him to buy stock from a regular promoter; as I am not and never will be a promoter. Personally, I expect to make my everlasting fortune out of this Oil and Copper wealth that nature has put at my doors.

If anyone cares to come in with me on an "Even Steven" break, and put up some money against my land for development, I will share even with them, interest for interest, on a basis of \$1 up, and the bank to take care of your money until we pay it out to the drillers, etc. I do not know or care anything about "marketing stock," etc. I know if you have oil and copper you can sell them; and as the world wants oil and copper, it looks good to me, to make our money by selling what we've got.

We have two wells producing some oil, and two farmers, boring for water in the same neighborhood, struck oil at a depth of 160 and 240 feet, respectively. L. W. Powell, a farmer, was boring a well for stock-water, and struck oil, which ran out down the hill side and on into the river, covering everything it touched.

We have 15,000 acres of land leased in this vicinity, covering these wells, and our leases also cover land on which we have discovered a ledge of metal of some kind; this substance is about 8 to 9 inches thick, and lays 30 feet underground. It lays under a hill and this land as well as the surrounding is rough as thunder. I recently sent a sample from this ledge to the Bureau of Geology and Mines at Rolla, Mo., and herein you will find a copy of their reply to me regarding this substance:

Mr. John W. Everman,

Dear Sir:—
In the absence of Mr. Buehler, I beg to acknowledge receipt of your letter and sample submitted August 22nd.
The sample is pure native copper, and I judge it lies in the drift above the bed-rock, where you found the principal mass. I can easily realize your difficulty in detaching this small piece. If you have a large enough block of the substance, better bring it up to the top, as copper is now
