## CASS CO. FARM BUREAU NOTES

### Weevil in Wheat

Many have reported that the weevil is doing much damage in the stored wheat. Treatment for weevil—use 1 No. of carbon bisulphide to every 35 bushels of wheat. Pour the liquid on top of the wheat or put it in shallow pans and set on top of the wheat. The fumes are heavier than air so they will travel downward, also they are very strong, so be careful not to breathe them. Do not light matches for it is very explosive. If the wheat is damp, setting the granary closed for 36 hours; if deeper leave 48 hours. Caution: After treating the wheat leave the building immediately.

## STATE POTATO CROP IS SHORT

Failure of Late Plantings to Meet Expectations Reason Given by Agricultural Department.

A decrease of 1,000 cars in the estimate of commercial potatoes in western Nebraska due to the failure of late plantings to meet previous expectations is announced today by the division of crop and live stock estimates and the Nebraska Department of Agriculture.

The condition of the western potato crop a month ago indicated a commercial surplus of 5,000 cars as compared to the present estimate of 2,000 cars and last year's shipments of 3,325 cars. A large per cent of the western crop was planted late and while the vine growth was good and indicated a fair yield, the tubers did not develop properly and the yields are very light. Some late planted fields received practically no rain. Irrigated potatoes were damaged also by extreme heat.

As a result of the poor yields of the late plantings which constitute a fairly large percentage of the total acreage, the commercial surplus will not exceed that of last year by more than 15 per cent in spite of the fact that the acreage is nearly 47 per cent larger. The present estimates are 2,300 cars from irrigated sections and 2,700 cars from dry land sections. The quantity that will actually move will depend largely upon future prices. At present the average price of dry land potatoes is about 50 cents per hundred pounds, or 30 cents per bushel to growers. Such low prices are certain to limit shipments.

Slightly previous to October 1, 1922, about 500 cars of western Nebraska potatoes have been moved, or about 10 per cent of the available surplus. After making due allowance for culls and storage, this would indicate that 15 per cent of the crop has been harvested.

Recent information from some competing sections offers a little encouragement to growers also. Dry weather is responsible for reduction in size and number per hill of tubers in Oregon and Washington, and there is considerable disease in Oregon. Idaho promises a large production. Reports from Michigan, Illinois and Indiana says that the crop is not turning out well. Some frost and rot damage in Michigan and scab in Illinois and Indiana. According to the September report from Maine, the potato crop is far below last year while New York and Pennsylvania show a fair increase. The condition in the north central states, including Minnesota, the Dakotas and Montana, shows little change but the crop is somewhat uneven due to disease and August drought.
