HAD TO TAKE IT TO APPRECIATE IT

Mrs. McDonald Had Heard Others Praise Tanlac—Her Experience Converted Her.

"Although I had heard Tanlac praised a great deal, I had no idea it was such a fine medicine until I took it myself," recently said Mrs. Anna McDonald, 534 Julian avenue, Dubuque, Iowa.

"My appetite had just about deserted me and I was so run-down that I fairly ached all over from tiredness. Palpitation and shortness of breath followed my meals and what I suffered from headaches, nervousness and dizziness was almost bad as being right down sick. I hardly knew what restful sleep was and had become pretty well discouraged over my condition.

"Before I had taken Tanlac a month a surprising change for the better had come over my entire system. And I felt tanlac had done away with my troubles went away and left me feeling so strong and well. My health is so good now that this is a real pleasure, thanks to Tanlac."

Tanlac is for sale by all good druggists. Accept no substitute. Over 10 million bottles sold.

Achievement Program

The Outgoing Sewing club held their achievement program at the home of their local leader, Mrs. Harry Arnold, Friday afternoon, October 10th. This club was composed of seven active members and they finished 100%. A very interesting program was given, each member taking part. After the program the hosts served delicious refreshments. We expect to hear more from this club another year. Much credit is due their local leader for the fine start the girls have in club work.

Stored Grain Pests

Now is the time to be on the look-out for pests in your stored grain. The most satisfactory method of destroying the weevil by fumigation with carbon bisulphide. This is used at the rate of one pound to 35 bushels of grain. This should be evaporated from shallow pans or sprinkled over the grain. Particular caution should be taken as carbon bisulphide is highly inflammable, also one should be very careful about inhaling the vapor.

Wintry Foultry Quarters

With time for getting the pullets into winter quarters poultry raisers are again confronted with the problem of poultry housing. Whatever type the poultry house may be order to be satisfactory it must be:

1.—Roomy, 3 to 4 square feet of floor space per bird depending somewhat upon the breed and the size of your flock.

2.—Well ventilated—provision must be made for interchange of air with the draft.

3.—Convenient for both the birds and attendant. This applies largely to the arrangement of equipment.

4.—Economical construction. Whether the house be built of frame or hollow the construction depends somewhat upon their availability.
