Manners, living south of Alvo, had the misfortune to get one of his best horses caught in a barbed wire fence with the effect that one of the horse's legs was very badly lacerated by the barbs. ELECTRICITY BRINGS GREAT OPPORTUNITY TO FARMERS

Discussing the enormous task of bringing electricity to each of the 6,372,263 farms of the United States, Arthur Williams, vice president of the New York Edison company said: "It may be true, at least to a certain extent, that as industry concentrates around abundant power sources, the tendency in farming may be in the same direction. Any further, just as more widely distributed power tends to decentralize industry, making it possible to locate the factory under selected conditions most advantageous for it and its workers, rather than to have its location determined by the availability of power, so universal power on the farm would spread effective and efficient farming all over the country, avoiding intense concentration in any given area, and bringing into cultivation enormous acreages either abandoned or worked far below their natural productive capacity. With abundant power available everywhere, the small farmer would be able to successfully establish himself on low-priced land—another form of greater opportunity in the national as well as the individual interest."
