Ho Hum-Woman Sets Record

'After 13 days of prolonged yawning, Mrs. Harold McKee of Round Grove, Ill., suddenly recovered from the affliction which was attributed to a nervous state resulting from worry over her invalid husband and diabetic son. 'At one time during her recent attack, Mrs. McKee yawned an average of 11 times a minute. She was beset by a similar affliction, December, 1934, which lasted nine days.

To the of this department and I am sure the portunity to dry out a bit. forecaster, a "warm front" is the public wants efficiency. line of advance of warm air moving into space formerly occupied by a cold air mass. A "cold front" is the advancing boundary of cold air dis-Oklahoma Thursday where he spent placing a mass of warm air.

Weathermen have divided air masses into 13 groups-"polar conor western Canada; "polar Pacific," Mr. and Mrs. S. C. Hardnock and Alderwood Manor, Washington where air that comes from the northern Pacific ocean; "tropical Gulf," from the Gulf of Mexico; and so on.

The trick in using air mass analysis Mrs. Turner McKinnon entertain- for forecasts, Mr. Gregg says, is to extra days vacation while the teach- ed the Alvo Woman's Reading club know the direction and rate of movement of air masses and, particularly, Those present were delightfully en- to figure out just when and where Iris Miller entertained a group of tertained at a Hallowe'en party plan- two contrasting masses will interact of meteorologists have been specially by day. They get their most useful information from observations obtained by daily airplane flights at 25 specially equipped stations. The possibility of error in picking out insignificant air masses for the forecaster's use is always present, especially for the western part of the weather map of the United States. There is no way to check up on air mass movements in the western part of the Pacific ocean. The day-by-day sequence of events in the sky-on which the forecasters depend in judging what kind of weather is coming -cannot, therefore, be traced as far back in their history in the far west as can be done on the east coast. Fronts along the Pacific coast can be identified only from their most re-

cent behavior. As a further aid in the practical application of air mass analysis, Mr. the elaborate festival of St. George, Gregg adds, two extra observations particularly useful in identifying air casses-equivalent potential temperature and specific humidity-will be included in the airplane weather reports sent out each day over the airway radio and the teletype system that connects approximately 25,000 miles of airways and weather sta-tions. These data will be the sta-Wednesday to answer a charge of selltions. These data will be given for each elevation at which temperature, pressure and relative humidity are

HEEDS ORACLE'S WARNING

Addis Ababa.- Emperor Haile Selassie was advised by his principal oracle and soothsayer that if he went to Dessye before his coronation anniversary Nov. 2, evil might befall.

The soothsayer, reading omens, told the emperor that if he waited until after Nov. 2, Ethiopia's battle against Italy surely would be crowned with success.

The emperor, thereupon, decided to observe his coronation ceremony Nov. 2, and, on Nov. 3, to participate in and depart for Dessye afterward.
