Students Pick Choice of Life Vocations

Farming Seems Most Popular with Boys; Stenographic Work and Teaching Girls' Choice.

The state department of education, under the direction of Mr. Fulmer, in charge of vocational education, has asked the local high school to present to the students the question as to their choice for life work.

In the boys of the school the vocation of farming seems to have the largest choice while engineer, mechanic, accountant, teaching and lawyers also seem to find high favor of the students. In their choice the boy students have signified their choice in the following:

Girls Make Choice.

The girls of the high school seem to hold to the fields that are still strongly feminine in their choice of vocations for the future. In this field stenographic work, teaching, nursing and beautician work have a large part as the following shows:

Assistance Director Gives Old Age Data

Advice to Those Who Have Made Applications as to the Manner of Handling Cases.

Because misinformation has created the impression among a number of applicants for old age assistance that those who have not received any payment of assistance have been rejected, Paul Vandervoort, county assistance director, made this statement to the press:

"No person who has not received a pink notification form from the office of the county assistance director has been removed from the list of those to be considered for assistance.

"This means that unless the applicant has been directly notified by the county assistance director that his application has been rejected or accepted, his application is still pending and is yet to be considered by the county board.

"The procedure after an applicant has filed his application is as follows: The county assistance director investigates the application and makes a house visit to the applicant's home. This is incorporated in a report which is then given to the county assistance committee for their consideration. After they have either approved or rejected the applications, the application is then returned to the county assistance director who either in person or by registered mail notifies the applicant that his application has either been approved or rejected.

"The applicant then has ten days in which to appeal the decision of the county committee, if he so desires. At the end of that time, the state assistance committee in Lincoln, who meanwhile, have received the application passed on by the county committee, if they find them to be in order will issue to approved applicants a certification of eligibility. These certificates are mailed directly to the applicant and are on a pink card. When the applicant receives this pink card, he shall sign the card and also come to the office of the county clerk to sign a card held by the clerk. In the case of applicants living outside of the county seat, it is not necessary that they come to the county clerk to sign the card in his possession, as these will be taken later. After the approval applicant has received his pink card from the state assistance committee, he will receive his check as soon as the county clerk is able to make it out.

"It should be understood by all persons who have applied for either blind or old age assistance that they will be definitely notified of any action taken on their application by the county committee and until they do receive such notice, they should not believe that the county committee has rejected their application."

"The Ford V-8 uses less fuel and oil for the power it gives than any other car we have ever made AND ITS UP-KEEP COST IS THE LOWEST"

ENTHUSIASTIC sales talk often begins and ends with gasoline mileage. Some salesmen would like you to believe it is the whole story of automobile economy. But drivers ought to know better. For, the fact is, it's way down the list.

The big items of car economy are low first cost, low up-keep cost and low depreciation. Savings here can make a great deal of difference in cost per mile. Gasoline mileage is more of a talking point than an economy factor.

Check up and you will find that the difference between 17 and 19 miles a

gallon is less than \$10 for a whole year's average driving (8400 miles at 18 cents a gallon). Here are the big items that make the Ford the most economical car:

More value for every dollar you pay.
Lower cost for repairs and service.
Long life. Slow depreciation.
Quality means economy and the 1936 Ford V-8 gives you more real quality than any other low-price car. No other car under \$1645 has a V-8 engine. No other low-price car has Center-Poise Riding, safe, sure mechanical brakes and Safety Glass all around at no extra cost.

\$25 A MONTH WITH USUAL LOW DOWN-PAYMENT, BUYS ANY NEW FORD V-8 CAR ON NEW UCC 1/2% PER MONTH FINANCE PLANS.
