President Roosevelt's idea seems to five years.

If the republican state committee acts wisely, it will hold a long and confidential interview with Bartley, before it fills the vacancy caused by the forced resignation of Regent Goold.

\*\*\*\*\*\*\*\*

The Christian Advocate, organ of the Methodist church, still stands by Mark Hanna's great Nebraska speech. Mark declared here in Lincoln, "There are no trusts." Now the Christian Advovate says: "The simple facts are that there are no trusts in the country, and though some concerns or owners are united for the same purpose, they are not trusts, nor have they by any means all the legal powers that the trusts had."

The Independent has doubts about the genuineness of the war between Havemeyer and Oxnard. This year's crop of beet sugar is not on the market and there is nothing to compete with the sugar trust and will not be for several weeks to come. This pretended attack on beet sugar will enable Oxnard to lower the price he pays for beets. After the beets are all in, the fight will be called off and the price of sugar will go up again.

\*\*\*\*\*\*\* alyzed, that he never got the money from Bartley. If he did get it he has paid half of it back. That he was chief stockholder, depositor and receiver of the bank that got the money, it. That Bartley sent the money there on his own motion, and that he, Goeld, has been devoting the last six years of his life to pay back the depositors of this broken bank,

#### \*\*\*\*\*\*\*\* A WEAK SPOT

Wednesday's Bee indicates that Mr. Rosewater has at last heard something about that interview with Bartley and he remarks in discussing Mr. Goold's resignation and the reasons given for

"The only weak spot in the statement is that the debt to the state, in the name of Bartley, should not have been given preference over other creditors of the bank, after it became apparent that the money belonged to the

"The incident emphasizes one point, whose lesson should not be overlooked: It is the pernicious and indefensible practice of custodians of public funds making deposits of public moneys in their own names. Bartley had no more right to deposit state money to his own name in any bank than he had to convert the funds to his own use. Unfortunately this practice has not yet been stopped."

That statement is an acknowledgement that the present state treasurer has nearly \$300,000 of state money deposited in banks in his own name instead of the name of the state, and that the treasurer having refused to tell where it is, is guilty of a "pernicious and indefensible practice." It seems to The Independent that that is another "weak spot."

\*\*\*\*\*\*\*\*\* REPUBLICAN BROTHERLY LOVE

The black journalists who have been who have opposed republican policies, versity. denouncing all opponents for their bitterness of speech, bewailing the flerceness of political contests, and anarchy and that the blood of the president was upon their hands, give of New York and Boss Quay of Philagreat prominence to a little bit of delphia are men of the same stripe. brotherly love exhibited on their side at a recent meeting of the Marquette and this year the democrats won't fuse ciub in Chicago. They met near the middle between the two rows of trees, each with his best friend, or second, as he was called. They shook hands in a friendly way. Then each second examined the opposing combatant, to see whether or not he had on a metalic bullet and sword-proof plate under his shirt. On each side, inside of the trees, was a bullet-proof screen for each of the seconds to stand in during the shooting match. In front of each screen lay two single-barreled flint-lock pistols and two swords. They then cast lots, by throwing up a chip, with bark on one side, to decide which combatant should have the first choice of weapons. One second threw up the chip and while in the air the other called out which side up the chip would The one who won stepped and chose his pistol and sword and the other followed. They then took their places back to back and at a certain signal marched from each other a certain number of trees and halted. Another signal was given and both turned and fired as quick as possible. Both missed. Their pistols were thrown down and they met each other with drawn sword in hand. After two or three parries one of their swords broke at the hilt. The combatant screaming for free silver and silk cur- threw down the hilt and asked for another sword. But his antagonist stepped forward and thrust him through and left him to die with nis sword piercing his body. We will confine modern world wonders to the nineteenth century and the most of them are discoveries and inyentions of utility. There are temples, bridges, acquiducts, tunnels and monuments much more wonderful today than any constructed in ancient times, but the more expanded useful wonders are more wonderful. The greatest wonder and the most useful of the present century is the railroad wonder. Up to 1830 the interior of America and the interior of all other countries was of little value. The most of the population of the world were dwelling in sight, or near by navigable water, either river, lake or ocean. When the dividing line between the United States and Canada was located on paper the treaty provided that the Canadians should have free use of the Mississippi for commercial purposes. It was then supposed that the head waters of that river was far to the north of the line. A navigable river was of great value in those days. Railroads have opened commerce across desert and plain and over hills and mountains. Turnpikes, canals and rivers have gone out of use in a great measure. The interior of continents now are nearly as valuable as the exterior. Railroads embody steam locomotion and steel track.

· The second world wonder is the navigation of water by steam. The power of steam had been discovered in the previous century, but its application to propelling ships and hauling railroad cars was reserved for the nineteenth century. Sails were used, but in rivers oars and push poles were used unless the wind was favorable. Railroads have served to level up continents and steam ships have leveled up the world in a great measure.

The third world wonder is the use and application of electric power. The telegraph, telephone, electric lights and electric motors, all are great wonders. They had learned many things about electricity, but nothing very wonderful. Franklin discovered that electricity caused lightning and thunder. He did not discover that it was the red hot air that made the light and that it was the air slapping together behind that made the thunder. mbezzler and a candidate for the peni- | ment has come so gradually that it And what is yet to come may be still

The fourth world wonder is the discovery of new and more powerful explosives and the invention of guns that bring them into use. The implements of war in ancient times were swords, spears, bows and slings. Gun powder was discovered two or three centuries ago. Guns at first had to be touched off with a brand of fire. Flint

## THE NAVAL CULPRIT

Was Sampson-A Miserable Scheme to Degrade Schley Exposed

Washington, D. C., Oct. 12, 1901.-Editor Independent: Washington is about to resume its normal condition. Tomorrow the period of mourning for the late lamented president expires, and the city will shed its sombre hue, its black bunting, and the flags will fly once more at the top-mast. Officially, the mourning is over and the president will launch forth in a way that is expected of him. The White house receptions will hardly be held until after the opening of the new year, when Miss Alice Roosevelt, the president's eldest daughter, will make her debut into society.

Politically, the city is practically dead. Not a sound rises from the arena, where often are enacted great things, save the demands for apologies rendered necessary by the impetuousity of Captain Lemly, judge advocate of the Schley court of inquiry. The all-absorbing topic in the newspapers is the Schley controversy. All week, they have been filled with evidence-hashed and re-hashed, and until today not a point of real importance has been brought out in the case. We have seen young naval officers, summoned as witnesses in the case by the department, disregard all previous maps and charts, and assert that what they said was correct. They have been told that the log and stadoto their original statements, and asserted that the stadometers were wrong, because of the fact that they were operated by enlisted men and not by naval graduates. This is some more of Admiral Sampson's kind of logic. But it is just what should be expected from department witnesses, for the department itself has often been confronted with figures and facts, and there only answer has been that all except their own figures lie. The

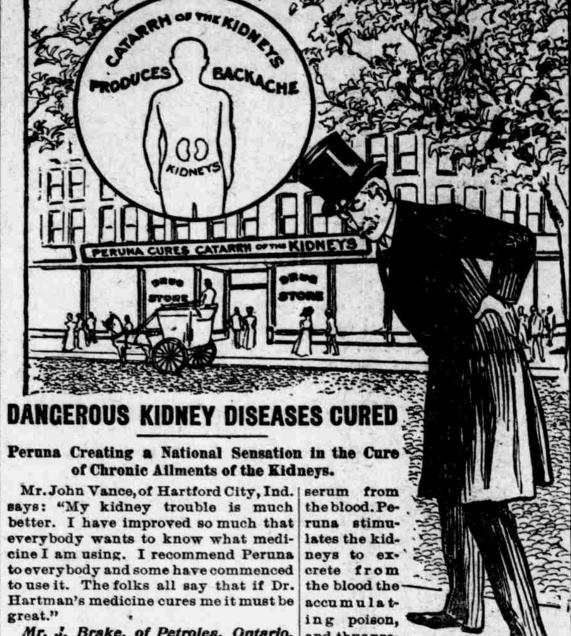

young officers are learning. Verily! At last one point of the prosecution has been discovered and dismissed. The fact is that up to the moment that Schley left Cienfuegos, he had not received a single word of positive information as to the whereabouts of Cervera's fleet. Sampson had the information on the 19th day of May-according to Chief Signal Officer Allen's report, and the admiral's spokesmen admit that the news was positively confirmed on the following day. Yet Sampson did not convey this fact to Schley by any of his messengers until a whole week had elapsed. It has been proven by the cross-examination of Lieutenant Commander Staunton that quite a number of officers knew of it, but that not a single word had been told Admiral Schley. Even the dispatches of Sampson sent on May 21 (two days after he had received his information) simply told him that the enemy was probably at Santiago, and left it to Schley to find out whether or not they were at Cienfuegos. This Schley could have done at least three days before had Sampson provided him with the code of signals agreed upon for communicating with the Cubans. As it really was, the information seems to have been given to every other officer, save Schley and the commander of his flagship, while at the same time he was charged to be sure that the enemy was not in Cienfuegos, Sampson withholding the only method Schley could have had to secure the information. All of this time Sampson knew that the enemy was not there, and was having Schley waste time on a

fool's errand. Looks queer-eh? Now this is what Sampson termed 'reprehensible conduct"-conduct for which an examination has shown that Sampson was entirely responsible. Schley was left before Cienfuegos, under Sampson's orders, to make sure that Cervera was not inside the harbor; he knew nothing of the signals agreed upon by Sampson; he knew nothing of the enemy's presence at Santiago, vessels came in and out with officers on board who knew the signal code, and who knew where Cervera really was; officers wig-wagged to other officers, who in turn did not notify Schley; other officers took it for known-thus the whole roaring farce was enacted. There seems to be no doubt as to the intentions of those connected—to keep Schley in utter ignorance of the enemy's presence. Yet Schley went on record charged with "reprehensible conduct" by the man entirely responsible for the delay.

These facts have been brought out | braska for information. by Attorney Isador Rayner, counsel for Schley, from the most unwilling sources. Exorted from witnesses like Captain Chadwick, who insisted that he should be allowed to write his answers and then be allowed to read them before answering the attorney's this. Not a single witness for the detense has been examined, and yet all has been wrung from the "department's witnesses" that the man charging "reprehensible conduct" was most responsible for the delays. Will the judge advocate be able to get such valuable information from the witnesses favorable to Admiral Schiey?

But there has been a serio-comic side to the whole case and that the actions of Captain Lemly, Judge advocate of the court. He has been a verit-

# **PERUNA GURES CATARRH** OF KIDNEYS EVERY TIME.

Mr. J. Brake, of Petroles, Ontario, and thus pre-Canada, writes: "Four years ago I vents the had a severe attack of Bright's Dis- convulsions ease, which brought me so low the which are sure to follow if the poisons doctor said nothing more could be are allowed to remain. whole procedure. This fat men has doubt if many anarchists could be afforded so much real entertainment that it would seem inappreciative to practicability of their teachings to emirefer to him harshly. But with it all his desire to aid Sampson has made him, in his enthusiasm appear to have der the protection of the stars and stepped a little outside the bounds of propriety. However, his enthusiasm, humorous as it may seem, he has certainly misunderstood his bearing as judge advocate of the court. The naval regulations provide:

"He summons witnesses, administers oaths or affirmation, records the proceedings of the court, puts all questions to the several witnesses, and "(e) To assist the court in syste-

matizing the information it may receive, to minute in the proceedings the opinion of the court, if called for, and to render to the court such assistance as may enable it to lay all the circumstances of the case before the convening authority in a clear and explicit manner.

"Also to assist in authenticating the proceedings."

Lemly has not only disregarded his duty, but has shown himself to be a Sampson partisan pure and simple. A verdict from the court is not expected for quite a while. Schley has reached the age limit and has been

retired from active service, but this will in no way effect the continuance of the court or the result of the ver-It can be plainly seen as the case

progresses that partisanship of the navy department. The feeling is that a verdict in favor of Schley would be a distinct rebuke to the administration and would result in the immediate resignation of Secretary Long from the cabinet. But whatever the result, the case has proven conclusively that the dispatches have been tampered with by government officials, and an examination by congress into the navy department and its actions, will undoubtedly result. WILLIAM W. BRIDE.

### Practical Education

During the last few years a great change has taken place in the attitude of the farmer upon the subject of agricultural education. This has been due to two causes. First, agricultural education has become much more practical as the schools have realized that the farm boy needed to know how to cultivate the soil, to care for an orchard, or to feed cattle in the best manner, or to do some other particular thing. If the farm boy can be taught how to breed or select a good steer for feeding purposes and how to feed him granted that Schley should have at greater profit, this surely makes his business more profitable. If he can be taught how to handle animals to prevent disease or to cure the simpler and more common diseases of animals, this certainly is a practical kin education which should be added to a knowledge of arithmetic, geography, etc. Write to the University of Ne-

# LOOKS AHEAD FOR WAR

Russia's Great Preparations on Land and Sea.

Fighting Strength of the Empire of Nicholas Is Being Constantly Increased-Scents a Clash With Japan and Proposes to Be Ready For Any Emergency.

The Russians are getting ready for an emergency, which means a war with Japan, and are increasing their navy and putting their army in fighting condition with great energy and at great expense, says William E. Curtis, writing from St. Petersburg to the Chicago Record-Herald. The army has recently been completely reorganized and provided with new equipments. The Russians unloaded 1,000,000 rifles of obsolete pattern upon the Chinese government and substituted new ones of long range, high power and small caliber. Those were Russian guns which the Boxers fired at the British embassy in Peking during the recent siege.

In numbers and fighting strength the armies of Russia and Japan are very far apart, but it must be considered that the battleground will be on the other side of the world from St. Petersburg, where Japan will be at home. Last year (1900) the Japanese army on a peace footing consisted of 87,847 men, while that of Russia numbered 1,264, 200, always under arms. The first reserve of Japan was 76,000 men and that of Russia 760,000. The second reserve of Japan was 238,000 men, making a total force on war footing of 402,274. The second reserve of Russia numbered 1,476,000, making a total of 3,500,000 soldiers at the command of the czar. But both armies have been reorganized since these statistics were issued.

The same difference exists in the navy, Russia in 1900 having 370 vessels in commission and Japan 171, Russia 5,073 guns, Japan 1,471.

Russia has twenty-two first class batships, twelve armored cruisers, eleven first class cruisers and 196 torpedo boats. Japan has six first class battleships, two armored cruisers, five first class cruisers and sixty-six torpedo boats. But these comparisons are not so significant when the geographical grate voluntarily to an anarchist situation is considered.

The lowest estimate of the peace strength of the Russian army under the present reorganization since Jan. 1 is 42,000 officers and 1,100,000 men and the war footing of 75,000 officers and 4,500,000 men, which is a million more than the present numerical strength. When the vessels now under construction are completed, the Russian navy will be increased by 113 ships of all classes, including twenty-four battleships, twenty-two cruisers, forty-one gunboats, thirty-five torpedo boat destroyers and forty-five torpedo boats. Fifty submarine boats are also under construction, but they are experimen-
