Considerable interest has been manifested by various physicians and milk consumers of the city of late over the problem of pure milk. The Waterloo Creamery Association, which owns and controls the product of more than forty-seven dairies, has come to the front with a solution of the question. They have adopted a simple and effect ive process of Pasteurizing milk. The milk alone of high-grade cows is selected. Only fresh morning's milk is subjected to the Pasteurizing process, which is thus described: As soon as received and inspected, the milk is placed in a Pasteurizing vat, which has a capacity of about 500 gailons, where it is slowly heated to about 160 degrees F. It is then drawn out into ten gailon cans which have been thoroughly washed and steamed, and is shipped to Omaha. During transit the consumers of the city of late over the oughly washed and steamed, and is shipped to Omaha. During transit the t mperature of the milk deviates but little from 160 degrees F. When re-ceived in Omaha it is immediately (while at the above temperature) put into bottles, which are sealed and then packed in ice, where it remains until it reaches the consumer.
