

**How to See the Wind.**  
 "Did you ever see the wind?"  
 "That's what I said. Did you see the wind?" asked a yachtsman, standing on a bluff of the sands watching the yachts sailing lower bay.  
 "I've never seen the wind," replied his friend.  
 "Well, I'll tell you how you may see it," said the yachtsman, "with a straight edge, a hand saw will answer the purpose. Stand on a bluff of the sands watching the yachts sailing lower bay. Let the wind blow from the left. Hold the straight edge vertically in your right hand, and the hand saw in your left hand, and incline it at an angle of 45 degrees to the wind, striking the wind over the edge. Now carefully follow the edge at some distance from the object, and you will see the air flow over water flows."  
 —Boston Globe.

**How to Hear Your Song Sublime.**  
 "I heard your song sublime, some other day," said, pulling away suddenly, and he got far as he was detained by rheumatism in his left knee. I pressed into his hand a package. The next day he ran to me and said "Wonderful this Salivation."  
 —London.

**Hereditary Accomplishment.**  
 A dog, owned by Professor Miles seven years ago, inherited an accomplishment from his mother, who had been used to sit up in an erect position and hold a stick in imitation of a soldier with a musket. This dog was from his mother when but a few weeks old, and before it had an opportunity of learning, any tricks by imitation. Without any training, when a month old, he assumed the erect position whenever anything was wanted. He never do anything else. He never "speak" with a short bark, as other dogs had been in the habit of doing. —Western Rural.

**Women and Work.**  
 Mr. William Y. Stead, editor of the Pall Mall Gazette, was asked if women should probably do important work on a newspaper of the future. He answered: "Women in the future will be more important than in the past. In the lower callings of life, there is the carrying of heavy loads and that sort of thing to be done. We see very little difference between the sexes in Europe. It is only in the higher callings, where there is a difference of opinion, that the women are barred out."  
 —London.

**How's This!**  
 A reward of One Hundred Dollars is offered for the discovery of a cure for the Catarrh of the Bladder. The undersigned, having known F. J. J. for the last 15 years, and believe him to be a man of honor and integrity, and financially able to carry out any obligations made by him.  
 F. J. J. is a resident of Toledo, Ohio, and is a member of the Wholesale Druggists, Toledo, Ohio. He is also a member of the Wholesale Druggists, Toledo, Ohio.  
 F. J. J. is a member of the Wholesale Druggists, Toledo, Ohio. He is also a member of the Wholesale Druggists, Toledo, Ohio.

**How to Milk a Cow.**  
 The most economical way to milk a cow, all things considered, is to milk the two fore teats clean, leaving off with a pretty full stream, and then milk the hind ones down to a short stream, and returning to the fore ones, milk them to the same condition. This will leave the teats empty, and the bugs too. It is a false notion that tugging away at the teats stimulates a cow to give more milk; but, on the contrary, emptying the bag as soon as possible yields more; then the cow can have the extra time to eat, which is a better stimulus than either. A slow milker is never tolerated in the dairy districts, and a "stripper" is an injury anywhere. The sooner the cow is milked, and all the organs connected with feeding, digestion and secretion are left in their natural condition, the better it is for the cow. —Rural Canadian.

**ONE ENJOYS**  
 Both the method and results when Syrup of Figs is taken; it is pleasant and refreshing to the taste, and acts directly yet promptly on the Kidneys, Liver and Bowels, cleanses the system effectually, dispels colds, headaches and fevers and cures habitual constipation. Syrup of Figs is the only remedy of its kind ever prepared, pleasing to the taste and agreeable to the stomach, prompt in its action and truly beneficial in its results, prepared only from the most healthy and agreeable substances, and many excellent qualities commend it to all and have made it the most popular remedy known.  
 Syrup of Figs is for sale in 50c and \$1 bottles by all leading druggists. Any reliable druggist who may not have it on hand will procure it promptly for any one who wishes to try it. Do not accept inferior substitutes.  
**CALIFORNIA FIG SYRUP CO.**  
 SAN FRANCISCO, CAL.  
 LONDON, ENGLAND.

**THE FARM.**

**Articultural Notes.**  
 Cayenne pepper in moderation is a valuable ingredient in the soft food for chickens. Too much of it is irritating to the internal organs.  
 The winds of this season will make sad havoc with the flocks if they are exposed, and especially should the hens be protected at night.  
 When a man is frightened or angry his digestive organs do not work; this is also true of an animal—hence the profit of keeping it in a peaceful and fearless state by kind treatment.  
 In fattening hogs, have a dry-floored pen and plenty of clean bedding. Dispense with that half of the pen generally allowed for rooting in the ground.  
 It is an old belief that an animal that goes into winter quarters fat is half wintered. Perhaps there are none of our domestic animals to which this saying is more applicable than to sheep.

**The Dairy Interests of the United States.**  
 Says an exchange, foot up to \$3,000,000,000, while the entire banking capital of the country is only about \$981,000,000. The number of milk cows is 21,000,000, giving an average of 350 gallons each annually, or 7,350,000,000 gallons in a year.  
 Cows are liable to severe accidents if compelled to tramp over icy paths to water, or if ice is allowed to accumulate around the watering trough in the yard. There is no room for question about the economy of taking the extreme chill from the drinking water for stock. Yet there are few farmers who will take the trouble, and the least they can do is to see that the chilly watering places are not rendered inaccessible by ice blockades.

**The American Girl.**  
 It may fairly be acknowledged that the "American girl" is the girl of the period. What she may become in the future nobody can tell. At present her destiny seems superb. Her father finds silver, strikes oil, kills pigs by the million, and raises corn by the square mile. She is pretty, can talk well, does not know what deference means, and enters Europe full of money. "If he but shake a traveling cloak, down our Appian roll the scudi," said Mrs. Browning's Roman of John Bull. It is still true of the little girl whom Uncle Sam does his best to spoil by unlimited tenderness and innumerable caresses. As a result of her beauty, her smartness, or her wealth—sometimes all combined—she has French nobles, Italian princes, and English dukes at her feet, and can capture coronets at her will. Sometimes as Henry James and Mr. Howells point out, she is not so eager for these ornaments as might be expected. For the truth must be told—marriage does not seem to the fair American what it still means to the majority of English women. Whether we call it a virtue or a fault, she can do without it. French women, their countrymen say, are not blameless as wives, but perfect as mothers. Young American ladies of culture do not greatly desire, it is said, either to be wives or mothers. It is well, then, that they should come to English soil to find for themselves the attractiveness of English nurseries and homes. They will learn here that no queen in society has so true a throne as the wife and mother who mixes love with rule, and even is in future years the slender Yankee belle is hidden behind the ampler beauty of the English matron. We still hear from her lips the wit and shrewdness, the acute accent, the intelligent questions, and the rapid repartee that proclaim her original nationality. —London Telegraph.

**Care of Cattle.**  
 If the cattle are turned out of doors to drink or for exercise, do not let them remain out too long, and guard against their having to plunge through snowdrifts or against slipping upon icy places. A little exercise in the open air in pleasant weather is beneficial to all animals, but a half-hour in each afternoon is enough when the thermometer marks below the freezing point in the sun, and is too much in a cold rain or a blustering cold wind. Perhaps the young stock, if well fed and lively enough to caper and play about the yard, may not be injured by a longer season out of doors, but they should be taken in before they begin to hump up their backs and turn their tails toward the wind. —Cultivator.

**Artificial Deformity.**  
 From the New York Press.  
 The great trouble with the man of the present day is his feet. The average complexion is well enough, but the average foot is a fright. Almost every man you see has an enormous protuberance on his big toe-joint, buttons, I think they call them, which is far from pleasing to the sight or helpful to the gait. I suppose this is occasioned chiefly by the high heels worn by very young men and very silly women. Nature intended the heel to be flat on the ground, but fashion not only hoists it up an inch or two, but sends it forward toward the middle of the foot. This of course jams the toes into a contracted space, and a growth which, if normal, would be all right, being abnormal seeks room where it most easily can find it, and the consequence is a disfigurement of a very essential and interesting portion of our anatomy.

**Naval Yarns.**  
 The story has been attributed to a former secretary that under his first visit to a man-of-war he expressed his astonishment at finding "the darned thing holler." The yarn, from frequent use, has become somewhat threadbare, and the following has been substituted: Shortly after a new secretary had assumed charge of the department he made a tour of inspection, and while on board a craft in process of construction, was asked to define the proper dimensions of a hatchway. It was something of a poser for the cabinet officer, but after considerable deliberation he replied, "It depends in a great measure upon the size of the hen and the number of eggs she is to sit on."
