

German 'Erythrin' Syrup

My acquaintance with Dr. J. G. D. Bosch's German Syrup made about fourteen years ago when I contracted a cold which disabled me from my work for a number of days. After trying a Physician, who prescribed for me a course of medicine, I could obtain no relief—I cannot say what remedy he prescribed, but it was advertised in your paper and I obtained a bottle. I tried it and it gave me permanent relief. I have never had another attack of cold, cough, or bronchial troubles since. My family, Bosch's German Syrup has been our favorite for many years. I have never hesitated to recommend it to my friends. My experience of its use has led me to say that whenever we have a cold or bronchial troubles or any kind of pulmonary trouble, Bosch's German Syrup is our best friend. I have never hesitated to recommend it to my friends. My experience of its use has led me to say that whenever we have a cold or bronchial troubles or any kind of pulmonary trouble, Bosch's German Syrup is our best friend.

A Safe Remedy.

Cures Biliousness, etc.

English Conservatism.

The careful and conservative spirit which characterizes so much of the work done in England is shown in connection with the recent splendid piece of work, the City and South London Railway. While many of the details of the line are carried out with the perfection of modern electrical skill, there are so much behind modern progress as to appear in a measure inconsistent with the enterprise which characterizes the rest of the work. It appears that the elevators leading to the underground stations are operated by hydraulic power. There is a good deal of dissatisfaction that electricity has not been used for this purpose. Nothing could be better adapted for working lifts than motors, and the saving in expense would have been considerable.

Differences between Women.

A Kentuckian, speaking of the northern fashion of letting a woman hustle for herself in public places, says that this is due to the demeanor of the northern woman herself. When he is south he always resigns his seat in a public vehicle to a woman, and makes it his business to secure her comfort whenever possible, regarding the welfare of every woman as the special care of every man. In the south the women are dependent, confiding and helpless.

More Time.

Busy people always seem to have plenty of time. Their day is only twenty-four hours long, yet out of that twenty-four hours—fourteen hundred and forty moments—they find space for an astonishing amount of work. They are never afraid to undertake a new thing. They have always a few minutes to give to a friend. They will secure an hour for some congenial occupation. It is to the busy men you go, asking can they take a part in this new project. Certainly; state what you would like done, or how you wish it, and they will lend a hand. Why, if you so desire, they will take time to tell you just what you ought to begin, and how to manage it. And when one piece of work is accomplished they pass to the next with perfect readiness and a calm confidence in their own ability.

Stanley as a Pirate.

The Emin relief expedition was in all respects a private enterprise. There was not a shadow of authority in the hands of any one connected with it to raise troops, to inflict capital or other corporal punishment on persons in its service, to make war on foreign soil, to levy supplies by force, or to purchase, hold, or employ slaves; yet all these things were done by Stanley or by some of his subordinates. There can be no question, if we can judge from Mr. Stanley's account of Emin and his men that had even half of what he found out about them been known in London three months or even two months before he started, the "Emin Relief Committee" would never have been organized; and Emin and his ragamuffin army would have been left to get out of their scrape as best they could. What prevented preliminary inquiry was undoubtedly the Gordon legend, which surrounded with a heroic halo every European shut up in the Sudan. Of the illegality of the enterprise under the municipal law of England, there can be little question.—E. L. Godkin in the February Forum.

Whose Face Was It?

A few years ago while a workman at Pueblo, Colo., was dressing a block of stone his chisel uncovered a hard concretion near the surface of the block. Presently this concretion, which was rounded on the back dropped from the cavity in which it rested, disclosing a perfect mold of a human face on its surface, every outline perfect, unharmed and unmarked by the tool which had dislodged it. The imprint in the block was as perfect as the model on the concretion, and many plaster casts were taken from it by archeologists and local curiosity seekers. Some of these casts found their way to the museums of the learned societies of Europe, were the subject of many debates. Many scientists were inclined to take it as a perfect human fossil; but the majority insists upon it being merely an idol of prehistoric times. The stone in which it was found was from eighty feet below the surface.—St. Louis Republic.

Mr. Childs' Country Home.

"Wooten," Mr. George W. Childs' place at Bryn Mawr, is one of the handsomest and most expensively maintained country places in the United States. The annual expenditure is not far from \$30,000, of which \$12,000 is paid to house servants and other employes. Twenty men and twelve horses are kept busy all the year round in caring for the farm and grounds, and in summer six additional men are required to look after the lawn, while as many more assist the gardener.—New York Ledger.

The Russians are Moving.

The migration of settlers or laborers from the interior of Russia to the Caucasian and Siberian districts is still increasing. The cities on the various roads are literally overflowing with emigrants, among whom great distress prevails. In Tumen alone there are over 20,000 emigrants. Most of them have to sleep in the open air. Great mortality from contagious malarial diseases prevails among them. The means of the imperial Emigration Committee are exhausted, and from private sources help comes in very slowly. Mr. Jacob Poliskoff, the great Jewish railroad builder, has sent large sums to help the emigrants, but this help was as a "drop in the bucket." The Russian press begins to be anxious about this migration of large masses of people. If any epidemic should break out there is no telling what mischief this straggling mass, which is in want and distress, may create. The Cosacks on the lines of emigration are kept on the alert.

Obsequious Servants.

A lady recently returned from Japan adds another to the many tales of the obsequiousness of Japanese servants. In leaving the house one day with his nurse, says an exchange, her little son sipped and fell, receiving no injury beyond a few scratches. The nurse upbraided herself in the most extravagant of dire consequences upon her head. The other servants, to whom the affair was told by the unhappy maid, were equally shocked and outraged, and the jabbering and chattering lasted interminably. For weeks afterward the occurrence was referred to as a dreadful calamity, and the day of its happening served for a long time as a prominent date by which to place other events. It is farther stated that the accident was not witnessed by any member of the family. It would never have been known to the boy's mother save for the intense and continued excitement it created.

Price no Object.

We are acquainted with a Cumberland County man of rather slow wits who engaged a lot of pine timber to a certain mill man. Sledding had nearly gone, but the timber didn't come. About this time the mill man met our acquaintance and asked when he was going to get that pine. "Well, the truth is, Charles, I sold that timber to Berry." "Sold it to Berry?" cried the mill man. "What did you do that for—did he give you more than I offered?" "No, he didn't give me quite so much, Charles; but I think his judgment is a little better'n yours."—Lewiston Journal.
