**HE WAS IN IT.**

Judge Monroe so Evident in Favor of Kelly.

An Interesting Suit Involving the Ownership of One-Fourth of a Louisiana State Lottery Ticket Purchased by St. Louis Parties.

**KELLY vs. FENLOW.**

John J. Kelly vs. People's Bank et als. Plaintiff began this suit by seizing a lottery ticket, one-twentieth of a whole ticket, which had won \$15,000 and had been forwarded to the People's Bank for collection, and in which he claimed one-fourth interest as owner. By consent, the ticket was cashed, and the unclaimed three-quarters were withdrawn, leaving the contested one-quarter, which was also claimed by Jno. W. Fenlow under control of the court.

The parties live in St. Louis, and have been quite unfortunate. In 1891 Fenlow, Kelly, Norleman, O'Keefe and Connors formed a quasi club, and on three or four occasions purchased five fractions of lottery tickets, said fractions costing 61 each, and each member contributing his proportion of the price, was equally interested in the winnings. Fenlow generally was charged with purchasing the tickets, and held them until the drawing.

The members usually paid their contributions before the drawings, and Fenlow paid the lottery ticket vendor.

In April, 1892, they invested (Connors had dropped out). All paid except Kelly, who had agreed to pay his dollar on the day preceding the drawing.

The tickets had been selected by Norleman. There was no further intercourse between the members of the club until after the drawing on Tuesday, April 12th, when it was learned that one of the four tickets had won \$15,000. The tickets have been paid for by Fenlow, and the question for the court to decide is whether Fenlow paid for account of Kelly, one dollar or whether it was for his own account.

The day after the drawing Kelly tendered his dollar but was told that he was "too late" and that he was "not in it."

The court concludes that Fenlow gave Kelly to understand that he (Fenlow) would see that Kelly's interest in the ticket would be paid for.

It is therefore ordered, adjudged and decreed that there be judgment in favor of John J. Kelly and against John W. Fenlow, decreeing Kelly to have been the owner of an undivided one-fourth interest in the lottery ticket and that plaintiff receive and collect 3,750, representing the one-fourth of the proceeds of the lottery ticket now on deposit.—New Orleans (La.) City Item.

Katie Smith is a little eight-year-old girl, of Chicago, who is without hands. She resides at 6516 Perry avenue. By means of an artificial hand she writes legibly, and she also writes by holding the pen in her mouth.

General Schuyler Hamilton, grandson of the first secretary of the Treasury, is living in New York at the age of 73. He served through three wars, was shot several times, had his lungs pierced with a Mexican lance, and yet is mentally and physically in excellent condition.

"Rev. Dr. Willis Greene Craig, moderator of the Presbyterian general assembly," says a writer in the Evening Post, "is about 60 years old and was born at Danville, Ky. He was educated at Center college and was afterwards graduated from the theological seminary at Danville.

In the world there are 51,000 breweries, nearly 20,000 of them being in Germany.

BERCHMAN'S PILLS take the place of an entire medicine chest, and should be kept for use in every family. 25 cents a box.

Cornellie Ustimovitch, an Austrian painter, permitted his political feelings to get the better of his judgment in painting a large picture of sinners in torment for a church at Butrica, in Galicia, and worked in several Polish statesmen as the more prominent flame-scorched sinners. The latter are making it as hot as possible for him in return by suits for defamation of character.

Get Small Bile Beans. 40 for 25c.

A Jersey City preacher placed candy in the category of rum, tobacco and other wall-eyed evils, and proclaims a crusade against the vile habits of masticating sweets. Success to him! The Jersey arch has a Guttenburg flavor, sugared over with the pale cast of Hoboken glaucos, and is said to be strong enough at forty paces to send an appetite on a sick leave. Away with it!

**"German Syrup"**

I am a farmer at Edom, Texas. I have used German Syrup for six years successfully for Sore Throat, Coughs, Colds, Hoarseness, Pains in Chest and Lungs and Spitting-up of Blood. I have tried many kinds of Cough Syrups in my time, but let me say to anyone wanting such a medicine—German Syrup is the best. We are subject to so many sudden changes from cold to hot, damp weather here, but in families where German Syrup is used there is little trouble from colds. John F. Jones.

**THE ELUSIVE COCKROACH.**

The Free Press Tells of a Compastionable Fellow.

The flea which you've got when you haven't him is fairly nimble and active, but he is nothing in the line of agility compared to the cockroach. The latter is so elusive that you wonder if he is real or fanciful. A certain cockroach has annoyed the writer for a long time. It must be the same one, for he has an individuality there is no mistaking. There are all kinds of cockroaches just as there are all kinds of people. This cockroach is always de trop. He always appears at an inopportune moment. Right in the climax of an article he presents himself and of course distracts attention by his presence. It is remarkable how obnoxious he makes himself. He appears on the corner of the desk and looks at you in his horrible familiar fashion. He does not present himself modestly and apologize for coming, or resentment might not be so strong. But he deliberately sits in front of you and glares at you in the most insulting manner, almost as though he were sneezing at the magnificent thoughts which are being paced on paper. He is such an odd-timer and he has seen so many magnificent thoughts! He has been coming like this so long! He has seen others sitting at that desk and also penning magnificent thoughts. He is a most arrant cynic. The most tender paths that causes the tears of the writer to fall and blot the pages do not move him. He never changes countenance. He has seen other occupants seated there and is not moved by any kind of emotion.

He has no patriotism and will look at the most fervid utterances unmoved. He doesn't care whether the country is saved or not. Even a charming poem is not solace for his soul. As he sits there you resent his presence and aim at him a swift blow, but in an instant he is gone. He is accustomed to dodging. He has been doing that for many generations. Poetry is his especial aversion, although he dislikes pathos exceedingly. Once it is on record that he disappeared of his own free will. The writer at the moment of his noiseless entrance was about to write a poem in keeping with the season:

"O snow, snow, beautiful snow,  
Watch the whirling flakes as they go,  
O, the snow the beautiful snow."

Then for the first time he left the scene without dodging. He disappeared as fast as he could scud and did not come again for a week. It was feared that he had expired behind the debris above the desk, but one night he came and perched himself as usual on the corner of the desk. He looked rather thin and worn, but otherwise he seemed in good health. It takes a good deal to kill a cockroach. Some of the former occupants say that they have really hit him before he could get away, but he always got off and recovered in his lair.

His sense of humor is dead or sleeping. A writer about ten years ago, however, wrote a joke that scintillated. It pleased him so much that he read it aloud and roared. The cockroach heard it and even he could not resist it. At first it merely tickled him, and then the more he thought about it, the better he liked it. He shook all over and finally got up on his hind legs and waved his arms and shouted. At least so the writer of the joke said and he was a truthful man!

The cockroach quite approves of the introduction of the typewriter on the editorial and local staff of this paper. In the beginning he wondered a great deal, but now he has become reconciled to the change. He doesn't stay on the corner of the desk any longer, but clambers right up on the machine. He appears first on one side and then on another. He likes to watch the copy evolved by this means. His face expresses real interest. It is not what is written that pleases him, for he is still a cynic in that respect, but the clatter and noise are amusing. He is very careful to dodge the blows of the type and so far he has escaped with his life. Whether fortune will favor him in the future is, of course, a matter of mere conjecture. However, he had better look out or he will get hurt some of these days.

**SIAM'S REAL RULER.**

Her Majesty the Queen Consort of the King of Siam bears the distinction of possessing less beautiful features and more sound intelligence than any of the women that surround the Siamese Court.

Though officially unproclaimed as the Royal Consort, Her Majesty is nevertheless practically supreme in influence, if not in authority.

The King has been her constant companion since boyhood, and there is absolutely nothing he would deny her in order to complete the happiness of his clever wife; in fact it is said that, were she to desire it, he would without hesitation abolish the time-honored custom of his country by casting aside the other wives of his harem.

King Chulalongkorn often relies on her wisdom and sound judgment in affairs of the Empire rather than on the advice of the Privy Councillors, although supposed to be well versed in the subtle arts of diplomacy and statecraft.

The Queen possesses the smallest feet of any grown woman in the world. Her boots have very low heels, and are heavily embroidered with pearls and paste diamonds.

A large Parisian house supplies the majority of Her Majesty's shoes, and charge her on an average two guineas a pair for them.

**THE COST OF EXTRA SPEED AT SEA.**

Atlantic speed has risen to an average of twenty knots at sea, to be beaten this year, it is confidently expected, by the twenty-one to twenty-two knots of the new Gunarders. To secure this extra speed an enormous increase in size is required; the necessity for this increase is easily seen from simple calculations on the laws so clearly laid down by Mr. Froude.

To put these laws into popular language, one per cent. increase speed over a given voyage requires two per cent. increase in length, six per cent. increase in tonnage and fuel, and seven per cent. increase in horsepower.

Because a torpedo boat has been constructed to run the measured mile at twenty-five knots it is generally supposed that a mere increase of size sufficient for seaworthiness would produce a vessel which could cross the Atlantic at the same speed.

So it could, provided we could re-coal every twenty-four hours or 600 miles; but it is the necessity of carrying the fuel requisite for five days' steam, or 3,000 miles, which imposes such gigantic dimensions on fast Atlantic steamers, inasmuch that it will be found that no one of our fast men-of-war could cross the Atlantic at full speed.

**A METAL THAT HARDENS STEEL.**

The reason why the mixture of tungsten with steel gives the latter so great a degree of hardness that it readily scratches glass and quartz seems to be revealed by a discovery recently made in Germany. A definitely crystallized compound of iron and tungsten has been discovered, the crystals being so hard as to scratch topaz.

Tungsten is a brittle white metal almost as heavy as gold. The crystals formed by its combination with iron, in the proportion of one atom of iron to two of tungsten, are silver-gray and very brilliant.

It is thought that when tungsten is alloyed with steel, some of the compound just described is formed in the mass, thereby producing the remarkable increase in the hardness of the steel.

This is an interesting example of the value that one metal may lend to another, for, until the discovery that it could be used in hardening steel, tungsten, although it occurs in considerable abundance, was practically useless and without value.

**WASTING TIME.**

An old farmer died in a little village in the neighborhood of Paris. His fortune, the fruit of years of patient toil, was invested in a nice, compact little farm. A nephew, believing himself to be heir, called a few days later on the lawyer, and before saying a word about the succession thought it only right and proper to shed a few tears.

"Poor uncle," he murmured, "so kind, so affectionate! To think that I shall never see him again!"

The notary allowed the young man to give full vent to his sorrowful emotions, after which he quietly observed—

"I suppose you are aware that your uncle has left you nothing?"

"What!" exclaimed the nephew, suddenly changing his tone. "I'm not down in my uncle's will?"

"No."

"Then why on earth did you let me stand here weeping and making a fool of myself for a good half hour?"

**THE SHARP PEOPLE OF CAPE COD.**

A story of sharp legislative practice comes from Cape Cod. It also illustrates the cumbersome methods of town government on that old-fashioned peninsula. Some of the citizens of a certain town believed that they saw a remunerative enterprise in raising herrings in a fresh-water pond near the sea, with which it had once been connected by a small creek now filled up. Thereupon they petitioned the legislature for a license to use the waters of the pond, at the same time giving notice of their application to the local authorities, as required in such cases. The sleepy town authorities were so slow in calling a meeting to consider the question of assent or protest that they were anticipated by the passage of the bill. The meeting was held, nevertheless, and angry protests were put on record against giving to a few persons natural advantages that rightly belonged to and should be enjoyed by the many. Undismayed by the storm they had provoked, the gentlemen interested in the propagation of herring have petitioned the Harbor and Land Commissioners for permission to open the old waterway from the sea.

**CATTLE ON BOARD SHIP.**

Cattle are carried on the spar, main and steerage decks. A large steamship like those now used carries from 1,000 to 1,500 head. The compartments are just large enough to let the animals lie down or roll about a little. The beasts are tied in these immediately they are driven aboard.

A stout rope is afterwards put about the animals' horns then passed through a hole in a three-inch board at the head of the stall and knotted on the other side. Fresh straw is put into the stalls every day, and the animals are well fed and watered during the voyage.

**A Matter of Health**

It costs more to make Royal Baking Powder than any other, because its ingredients are more highly refined and expensive. But the Royal is correspondingly purer and higher in leavening strength, and of greater money value to the consumer. The difference in cost of Royal over the best of the others does not equal the difference in leavening strength, nor make good the inferior work of the cheaper powders, nor remove the impurities which such powders leave in the food.

Where the finest food is required, the Royal Baking Powder only can be used.

Where the question of health is considered, no baking powder but Royal can be used with safety. All others are shown by official analyses to contain lime, ammonia or alum.

"How do you know, sir," asked the haughty young bride, "that my father is a man of wealth?"

"I have seen the jewels he gave you when we were married, my dear," replied the young husband with equal haughtiness. "I have the knowledge dimensions of his bank account, and I have seen his money bags. I know he is a rich man," he continued, meeting her gaze with unflinching eye. "from the testimony of the rocks."

"Harold," she said, brokenly, her lovely eyes filling with, "don't talk so! It is too high Miller rating."—Chicago Tribune.
