ent Ascent by Swiss and Italia Mountaineers.

The ascent of Mt. St. Ellas, will was accomplished by Prince Louis savoy and his associates, demons special adaptability of the " d Italian mountaineers for this ork. That a mountain rising better part of half a mile above summit of Mont Blanc, and in a rewhere the snow-line descends to within 2,000 to 3,000 feet of the sea-level, in even lower, should have been ascenprising advances that have been made f late years in mountaineering craft Although by no means rising to it Pioneer Peak, some 23,000 feets, or Aconcagus, or even of the 151 Canally apward of 22,000 feets, Mt. St. Ellis has in its prodigiously extended suc mantle, and in the hazardous approx b it over the backs of gigantle a greatly rifted glaciers, certain element associated with it which have bethought to render the mountain orthe most difficult to elimb of any me surface of the earth. The attended computed by the mercurial barre is 18,000 feet, a result surprisingly secord with the determination by anmeasurement, of Professor 10 who obtained "18,100, plus or minus probable error of 100 feet. | Em. measurements of the mountain title from less than 13,000 feet the Perco 1786) to approximately libers to (Dall, 1874). It is probably safe to a sept the present measurement, well-laces St. Ellas barring a possible of cess in favor of the neighboring ti oran as the second mountain oint of elevation on the North Ames can continent, the place of honor or longing to the Citaltepetl. the Star Mountain-better known as the real orizaba-of Mexico, to which he de terminations of Hellprin (1890, and rold), Scovell (1891, triangulation), and Kaska (1897, mercurial barometers giv. 18,2(3)00 feet. BAD DIGESTION, BAD HEART

Poor digestion often causes irregularit. the heart's action. This irregularity as be mistaken for real, organic hear The symptoms are much th mme. There is a vast difference between the two; organic heart disease is often in

curable; apparent heart disease is curable food digestion be restored.

A case in point is quoted from the New Bra, of Greensburg, Ind. Mrs. Ellen Co. old, had suffered for four year distressing stomach trouble. gases generated by the indigestion pres ed on the heart, and caused an irregula ity of its action. She had much pain stomach and heart, and was subjeto frequent and severe clinking spewhich were most severe at night. De-tors were tried in vain; the patient le-came worse, despondent, and feared in

A Case of Heart ! a lure. the was much frightened, but noticed d not annoy her, her heart's action be came sormal. Reasoning correctly that her digestion was alone at fault, she proher digestion was alone at fault, she preserved the proper medicine to freat the grouble, and with immediate good results. Her appetite came back, the choling spells became less frequent and find by ceased. Her weight, which had begreatly reduced, was restored, and show weighs more than for years. He blood became pure and her checks rosy. This disease is a common one, and that others may know the means of cure we give the name of the medicine used—Di Williams' Pink Pills for I ale People.

For Lifting Bowlders. Getting out bowlders from hay and cultivated fields is a matter of no little labor, especially .. the bowlder is deep-

ly imbedded in the earth. A very large stone, even, can be handled readily when upon the surface, but much laborious digging is required if the bowlstrength" by a team. A simple act of engineering that will greatly help in

limstration. Two stout pieces of joists farm, for the farm itself is to a cerare lashed together at the end and tain extent a market for the products placed above the bowder, as shown, grown thereon. Every article consumuninsprethen put arous the stone and fastened to the joists a third or so of to the sum that would be received for it long rope or chain from the top of the in which the farm is credited with evsticks to the whiffletree of the team erything taken therefrom, may show a gives the connecting link. On starting fair profit. If a farmer supports his up the team the bowider will be lifted out upon the ground very easily, for reasons that any one with a mechanical eye can readily see.- New York Tribune.

Produ ing Beef. When farmers produce beef from beef breeds they save time and gain in the weight of their animals. If a steer can be produced in a year it becomes a rival of the hog and sheep in rapidity of growth. At the recent Chicago fat stock show the weight of the prize yearling was 1.000 pounds, and its net weight, dressed, was 743 pounds, or 68.16 per cent of dressed ment. The two year-olds ranged from 1.312 pounds to 1,735 pounds alive, and dressed from 66 to 69 per cent. Such steers should pay well, and they bring better prices three "leaves" and is hinged to the side per pound than is usually obtained, but of the opening like a gate. One is not it is useless for farmers to attempt to thus crowded, as in getting through the

Kettle Crane with Dump. This iron framework for suspending a kettle used for boiling food for hogs and other stock upon the farm is most convenient. The iron kettle rests in

THON KETTLE CHANE.

an iron ring, which is pivoted to the side arms so that the kettle can be readily tipped and its contents poured out into palls. These arms could be omitthe kettle, and having the Iron ring ends. This would be a more stable arcangement but would not give so free a space for building the fire, although this would not cause material trouble. The principle involved will be found very convenient, however the ring, which may be made from an old wagon tire, is supported.-American Agriculturist.

Utilize Every Article. Farmers may have but little faith in the reports on feeding stock as given by the experimental stations, nevertheless the farmer who has some knowledge of the results obtained by a systematic course of feeding will be better prepared to meet difficulties than one who is not. The fact that farmers are becoming less wasteful of their fodder and straw shows that they have at least discovered that in order to compete in cattle raising they must utilize every article on the farm.

Stacking Corn Fodder. In some sections of the country corn fodder is tied in bundles and stacked like grain. The bundles are bound with straw bands in convenient size for handling. To begin the stack or rick, lay from Ohio to Washing- down three bundles side by side, then two on top of these and one on top of the two. Duplicate this pile until the rick is as long as desired. Now set buniles on each side of this foundation and ties at the ends until the bottom is of which means Work for the desired width. On this build the rice as you would wheat or rye, only

ors of the middle row of bunnes lap a little. In feeding from such a rick take the fodder from the end, beginning at the top and going to the bot om. This will not expose the heart of the stack to the weather.

Cob Coal for Hoga. One who raises from 100 to 150 pigs should aim to save at least 200 bushels sure may n t decompose as quickly unof cornects for charcoal. Make a pit dercover, but it will decompose after 41/2 * feet deep, 12 to 18 inches in while and be much more valuable than diameter at pottom, 41/2 to 5 feet at top. then the excessive rains and melting Have a sheet fron cover made large nows have washed out the best portion. enough to cover the off and project six inches over the edge. Start a fire in the bottom with shavings and add by Physical troubles of a like nature degrees a bushel of cobs, and let them coming from different causes are often get well aglow. Then add three to four a puzzle to those who suffer pain as to bushels more, and when well on fire add more, and so on, until the pit is rounding full. When all the cobs are well aglow, even blazing freely, cover with the other. Both are bad enough the hole with sheet iron and seal the and should have prompt attention, as edges with earth air-tight and leave it nothing disables so much as a lame until the next morning, when the char-back. The use of St. Jacobs Oil will coal can be taken out, and if the job is settle the question. Its efficacy is so well done there will be from nine to sure in either case there is no difference twelve bushels.-Farm. Stock and in the treatment and no doubt of the

All kinds of poultry have very strong der is to be havied out by "main digestive organs, provided they have the gravel with which to fill the giz zards, and have enough exercise to keep in vigorous health. They are pos itively injured by having the bulk of their food ground, moistened or cooked so as to make its digestion easier Young chicks are most apt to be in jured in this way, the popular idea be ing that as they are very small their gizzards cannot digest hard substances We always began feeding young chicks with cracked wheat, giving in addition some milk curd pressed hard, which is quite as difficult of digestion as the wheat. They will not eat much wheat at first, and it is best they should not Little and often should be the rule with

all young animals, chicks included. Real Farm Profit. The profit from a farm may be larger than supposed if the family is credited with all that is received. Profit is not altogether that which is sold from the ed by the farmer is equivalent in value he distance up from the ground. A if sold, and a strict keeping of accounts family, and also has something left, he is more fortunate than many.

An Improved Turnstile.
The ordinary turnstile that swings from the middle is an awkward affair at best, and is more or less unsightly The cut shows an improvement. It has

attain such success unless they are old style affair. Nor does it continualwilling to resort to the breeds that will by sag, as does the one supported by a ecomplish the objects desired. Using single center stake. For neatness of any kind of steers for producing the appearance the form shown in the cut holcest beef is but a loss of time and exhibits its own superiority. Such gates are exceedingly convenient on the farm.-New England Farmer.

> Care of Farm Implements. Far more waste of farm implements is due to rust and disuse than is the wear of them while some one is working with them. They are too often left exposed for weeks and months during the worst weather in the year, and thus treated will not last one-third as long, as they should not be fit to use any of the time. A convenient tool house near enough to the barns to be always easily accessible, yet not near enough to be in danger from fires, will pay better than almost any other investment on most farms.

It is easy to "save at the spigot and waste at the bung" when keeping growing swine. There is most profit in keeping them growing steadily and fast. The sow with a long, deep, flat side ted by bringing the end support nearer makes the best brood sow. The closing-knit, plump, rounded sow rarely has pivoted to a crosspiece secured to these large litters and she is as rarely a good

Horses. If you have a horse that refuses to go when asked, take a small rope and wrap it twice around the leg just below the knee, draw it tight and tie it. In a few minutes the horse will start. If he should show any indications of repeating the offense repeat the dose and he will be cured effectually.

WHAT MAN DOLL AND LOVE DEAUTY?

Mrs. Pinkham Counsels Young Wives to Keeep Their Attractiveness A Letter From a Young Wile.

Seven-eighths of the men in this world marry a woman because she is beautiful in their eyes. What a disappointment then to see the fair young wife's beauty fading away before a year passes over her head! I feel as if I would like to say to every young woman who is about to be married-"Strengthen yourself in advance, so that you will not break down under the new strain on your powers." Keep your beauty, it is a precious possession! Your husband loves your beauty, he is proud to be seen in public with you; try to keep it for his sake, and your The pale cheeks, the dark shadows under

the eyes, the general drooping of the young wife's form, what do they mean? They mean that her nerves are failing, that her strength is going and that something must be done to help her through the coming trials of maternity.

Build her up at once by a course of some tonic with specific powers. Such as Lydia E. Pinkham's Vegetable Compound. You can get it at any druggist's. Following we publish by request a letter from a young wife-of her own socord she addresses it to her "suffering sisters," and while from modesty she asks to withhold her name, she gives her initials and street number in Chambersburg, Pa., so she can easily be found personally or by letter:

To my Suffering Sisters:-Let me write this for your benefit, telling you what Lydia E. Pinkham's Vegetable Compound has done for me. I am but nineteen and suffered with painful menstruation, leucorrhoea, dizziness, burning sensation back of ears and on top of my head, nervousness, pain and soreness of muscles, bearing-down pains, could not sleep well, was unable to stand without pain, and oh! how I longed to be well!

One day I wrote to Mrs. Pinkham telling her all, knowing I could do . in perfect confidence. She wrote me a lovely letter in reply, telling me exactly what to do. After taking nine bottles of the Compound, one box of Liver pills, and using one-half package of Sanative wash, I can say I am cored. I ar o happy,

and owe my happiness to none other than Mrs. Pinkham. Why will women suffer when help is near? Let me as one n , has had some perience, urge all suffering women across to seek Mrs. Pinkham's advice -

on't monkey with polities and neglect the farm. Along with your other cross this Spring, sow one well selected Flax seed on your new ground. No thing with pay so well.
