The most lucrative of all the concerts are those given by rich hostesses, newly created millionaires, and aspirants to social position.

Patents are granted for inventions in many instances that have never been tested, but are theoretically operative and practical. In a recent deci-sion by Judge Morris in the court of appeals of the District of Columbia occurs the following:

'There is a great difference between inoperativeness and imperfection. It is well known that many inventions were extremely crude in their inception, and it is not always easy to recognize the original conception in the perfected device."

As a rule inventions are not born perfect and the evolution of important inventions and industries is highly interesting. Where two or more inventions contribute to the perfection of a machine or art each has rights that will be respected by the courts. The following is one of the claims allowed to C. H. Connelly of Fort Madison, Ia., for a combined lock and seal in which a key cannot enter the lock without breaking the fragile seal: A lock casing, a latch-bolt therein, a lock bolt engaging said latch-bolt, a seal box within the casing engaged by the lock-bolt and a seal in said seal box registering with the key hole of the lock casing.
